

1. I have 2 firewall and 2 router one for internet and other for WAN.
  2. what my customer wants is all the branch traffic comes from WAN router needs to go through firewall to enter in the ACI.
  3. Also default router will be towards internet firewall for internet access.
  4. Firewall and router will be managed separately.
- Question -
1. How the router and firewall will be connected to ACI physically ?
  2. firewall should be connected to BL and router should be connected to firewall not the ACI ?
  3. Also how traffic flow would work ?
  4. How inter VRF routing will work ?
