Tidal Enterprise Scheduler: Master / Client / Transporter compatibility if master is post 5.3.1.362

Document ID: 113512

Contents

Introduction

If you update the master or client to version 5.3.1.362 or later, there are some compatibility considerations. This document provides information about what needs to be taken into account.

Prerequisites

Requirements

Cisco recommends that you have knowledge of Tidal Enterprise Scheduler.

Components Used

The information in this document is based on the Tidal Enterprise Scheduler master or client that is being considered for update to 5.3.1.362 or later.

Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

Solution

The Readme file for Tidal Enterprise Scheduler 5.3.1 has this note for build 5.3.1.362:

Build 5.3.1.362 of Client, Master, API, saCmd, Transporter

Note: All components must be updated to support the protocol change. Update the master first, then other components.

If the master is updated to 5.3.1.362 or later, the Tidal Client must also be updated to 5.3.1.362 or later. If the Tidal Client is updated to 5.3.1.362 or later, the master must also be updated to 5.3.1.362 or later. Transporter is a client tool that also needs to be updated to 5.3.1.362 or later if the master is updated.

If you update your master to 5.3.1.362, you cannot transport between a pre– 5.3.1.362 master and a post–5.3.1.362 master.
