Introduction

This document answers if the Transporter can be used to transport jobs between 5.3.1.x and 6.x, or between two different 6.x versions.

Prerequisites

Requirements

Cisco recommends that you have knowledge of Tidal Enterprise Scheduler and Tidal Transporter.

Components Used

The information in this document is based on Transporter for 5.3.1 or 6.0.x.

Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

Solution

The Transporter cannot be used to transport jobs between master versions. It cannot be used between 5.3.1 and 6.0.x, or between two different 6.0.x versions. (for example, 6.0.2 and 6.0.3) Why not? The database structure in the tables involved is different between versions. If the jobs successfully moved to the different database version, then more than likely the jobs would not function correctly.
