Related Information

Introduction

This document provides information about hotfix #6 for Tidal Enterprise Orchestrator version 2.1.2.

Prerequisites

Components Used

The information in this document is based on the Tidal Enterprise Orchestrator version 2.1.2.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Issue

When a process or activity configuration is copied to another process the variable references are lost, which requires a re-configuration of the new content.

TEO 2.1.2 HotFix 6

HotFix 6 corrects the objects losing the variable references. Any release after the above version will include this hotfix and therefore is not required to be patched. Open a case and contact support in order to get access to this and any other Tidal Enterprise Orchestrator HotFix.
