Cisco Multicloud Portfolio

Simplify, secure, and optimize your multicloud world

In today's world, there is no single cloud. It's a multicloud world, with multiple cloud services from multiple providers. This growing complexity is creating a cloud gap between what your cloud applications require and what your people, processes, and tools can support. The result? Fragmentation. Loss of control with respect to data and security. And loss of speed.

But what if there is an answer for all this complexity? What if there is a simpler approach?

Cisco Multicloud Portfolio is the answer, and it does the work for you. It brings together essential multicloud software for networking, security, analytics, and management to make it easier to connect and protect your multicloud world. Easier to consume your cloud applications. And easier to find the right expert advice when you need it. It's time to rise above the complexity. It's time to elevate your expectations in a multicloud world (refer to Figure 1).

Benefits

· Brings together the essential solutions and services for successful multicloud deployments

· Simplifies ordering of products, implementation, and support of your multicloud environment

· Lowers TCO with software, labor, and support savings
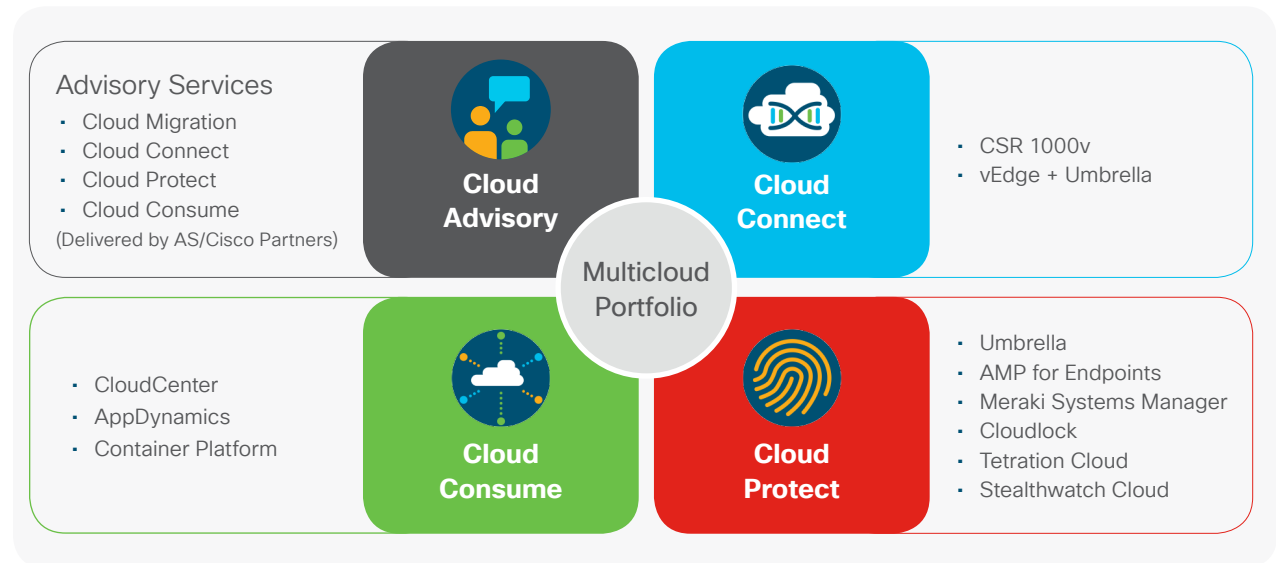

Optimize your multicloud environment

The multicloud world challenges organizations with new requirements for success: Secure connectivity that can be deployed and managed regardless of location or cloud. Risk management that can handle a larger and diverse attack surface. Visibility that can follow the data and applications wherever they are. And operations that can span multiple clouds.

Cisco Multicloud Portfolio includes:

- Cloud Advisory to help you design, plan, accelerate, and minimize risk when you migrate to multicloud
- Cloud Connect to securely extend your private networks into public clouds and ensure the application experience
- Cloud Protect to protect multicloud identities, direct-to-cloud connectivity, data, and applications including Software-as-a-Service (SaaS)
- Cloud Consume to deploy, monitor, and optimize your applications in multicloud environments

Unlike other solutions that optimize only for specific cloud environments or a single cloud, Cisco Multicloud Portfolio can help you optimize for the realities of a multicloud world.

Figure 1. Cisco Multicloud Portfolio

Advisory Services
- Cloud Migration
- Cloud Connect
- Cloud Protect
- Cloud Consume
(Delivered by AS/Cisco Partners)

Cloud Advisory

Cloud Connect
- CSR 1000v
- vEdge + Umbrella

Multicloud Portfolio

- CloudCenter
- AppDynamics
- Container Platform

Cloud Consume

Cloud Protect
- Umbrella
- AMP for Endpoints
- Meraki Systems Manager
- Cloudlock
- Tetration Cloud
- Stealthwatch Cloud

Start using the multicloud essentials today

With our Multicloud Portfolio, Cisco brings together the essential multicloud software for networking, security, analytics, and management to help optimize your strategy and your multicloud deployments. For additional information, visit Cisco.com/go/multicloud.
