

Security Management made Easy

Staying ahead of threat vectors and remediating events quickly is not easy when security management is done in silos using multiple management tools. Cisco's Firepower Management Center can centralize, integrate and make security analysis management easier whether you are managing few next generation firewalls or hundreds of them in your network.

Detect, Contain and Remediate Threats with Advanced Malware Protection

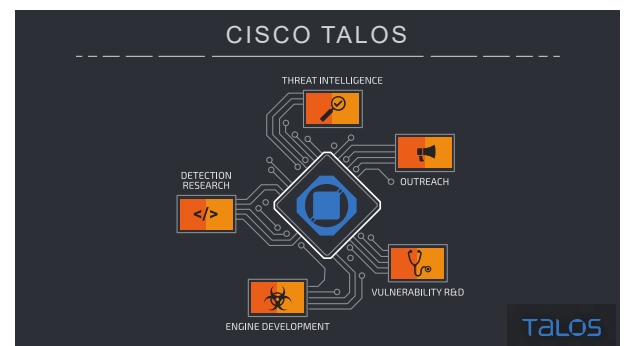

<http://cs.co/90088kn7a>

As technology evolved, so did Malware. Today's cyber threats are sophisticated to infiltrate beyond perimeter security technologies. Also first line defense tools provide little visibility into the activity of threats once they penetrate your organization. Cisco Advanced Malware Protection (AMP) solution provides not only point-in-time detection but also has extensive global threat intelligence visibility. AMP continuously watches a file for behavioral changes and provide retrospective inspection and also provide advanced sandboxing capabilities

Cisco Talos - Comprehensive Threat Intelligence

The cyber world needs *Supermen* and from Cisco its Talos! Cisco Talos is the research team behind major takedowns of Angler, TeslaCrypt decryption tool, CryptoWall 4 analysis. Cisco Talos has industry leading expertise in Malware research, vulnerability development, intrusion and hacking attempts and this intelligence is fed to all Cisco Security products to combat cyber threats. Talos detects and correlates threats in real time using the largest threat detection network in the world spanning web request, emails, malware samples, open source data sets, endpoint intelligence and network intrusions.

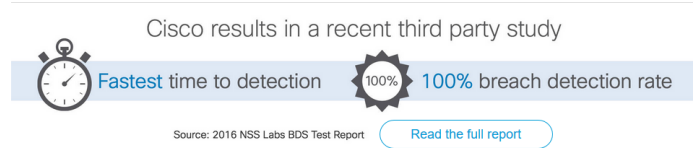

Simply put, Talos makes Internet a safe place.

Cisco Firepower 2100 series NGFW

Cisco's newly announced mid-range 2100 series NGFW is the best of all worlds – performance, price and security effectiveness. Its Dual multi-core CPU architecture optimizes Firewall, Crypto and Threat Functions.

2100 series mid-range NGFW sustains its performance metrics when Firewall, Application Visibility control and IPS threat functionality are turned on. They show ~0% performance degradation compared with ~50% on competing solutions.

Services	Cisco Firepower 2100 Series
FW+AVC	1.9 - 8.5 Gbps
FW+AVC+IPS	1.9 - 8.5 Gbps
Throughput Degradation (vs. FW+AVC)	~ 0%

Sustains performance
