# O problema

Source: Gartner & CyberSecurity Ventures

# Há necessidade de Administradores de rede na nuvem?

# O conhecimento de rede é fundamental na nuvem

Internet access & DNS

Segmentation & Policy

Subnets & IP Addressing

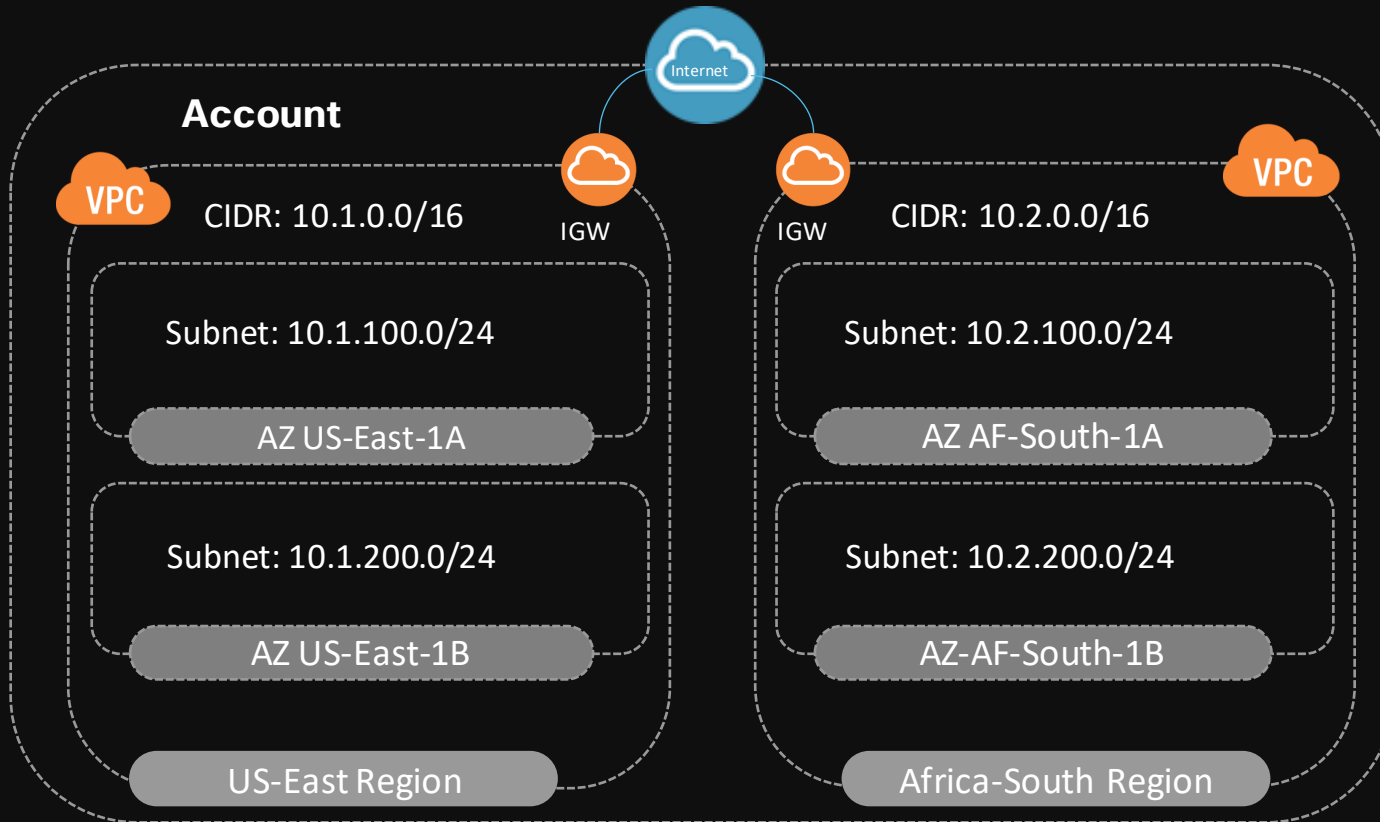

High-Availability Designs

Cloud Interconnect

VPNs, NAT & L4-L7

# Cloud Networking: AWS

VPCs are equivalent to VRFs

Default VPCs are pre-configured\*

CIDR blocks created per VPC

VPCs connect to Internet via IGWs

Subnets derived from CIDR blocks

Subnets are private (default) or public

Cloud Provider

Services

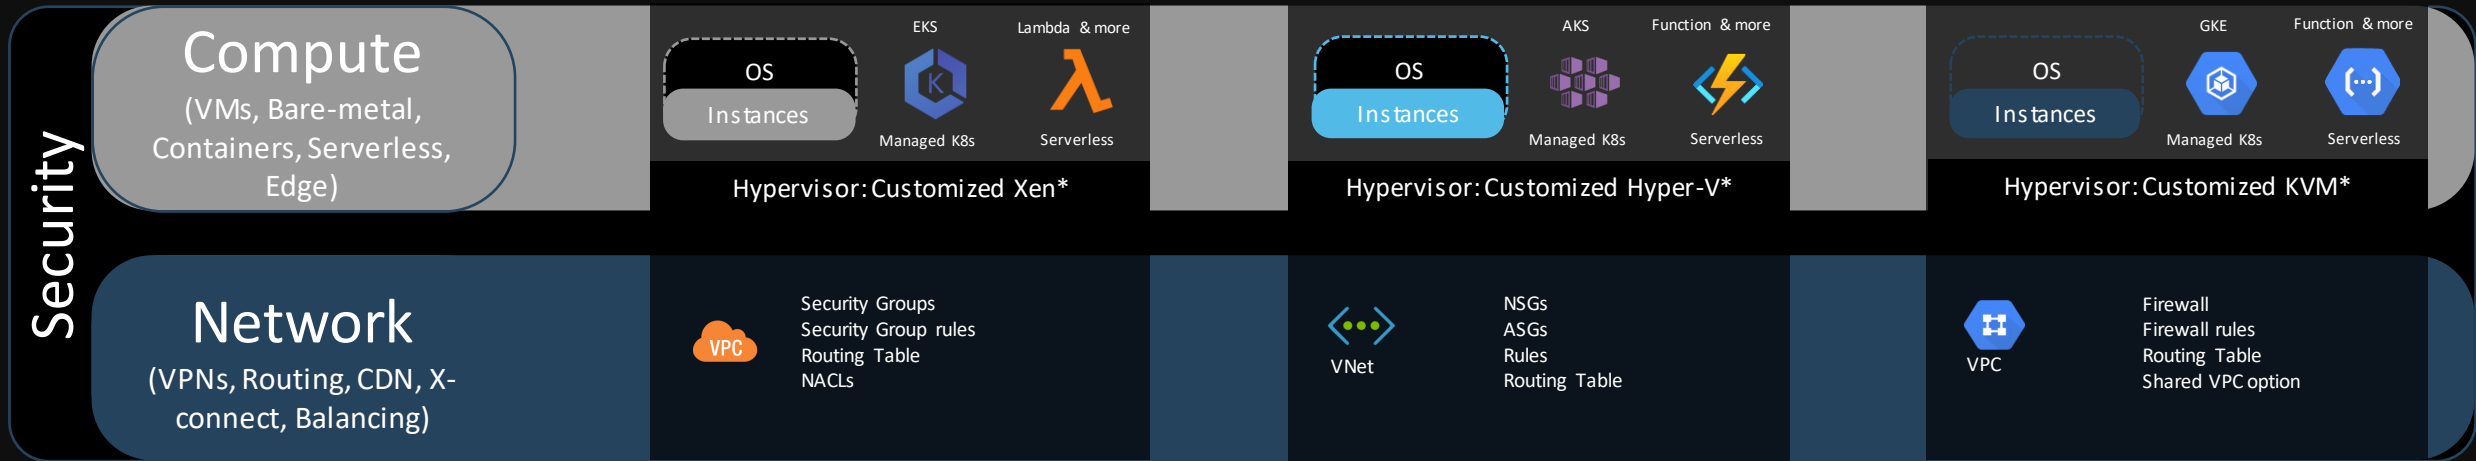

# Cloud Networking Services

L3-based forwarding (No L2)

Broadcast traffic not supported

Multicast traffic is not supported/limited

Cloud Provider

Services

\* Cloud Provider's hypervisor does not allow/require any configuration

# Cloud Networking: AWS

Inter VPC, Inter Region & Inter Cloud Connectivity Options

Single & Multi-Region

## VPC Peering

Point-to-point connectivity (not very scalable)

TGW Hub

TGW Spoke

Hybrid-Cloud VPN & Inter-VPC  
(Hub & Spoke)

## Virtual Private Gateway (VGW)

Terminates VPN connections (IPSec)

## Transit Gateway (TGW)

Interconnect hub service for VPC-to-VPC & on-prem (IPSec)

Single & Multi-Region (TGW peering)

Spoke VPC

## CSR-1000v, vMX, SD-WAN & 3<sup>rd</sup> party

Used for transit services & inter-cloud connections (IPSec)

Inter-Cloud and Hybrid-Cloud VPN

Cloud Provider

Services

# Cloud Networking: AWS

Inter VPC, Inter Region & Inter Cloud Connectivity Options

Single & Multi-Region

## VPC Peering

Point-to-point connectivity (not very scalable)

TGW Hub

TGW Spoke

Hybrid-Cloud VPN & Inter-VPC  
(Hub & Spoke)

## Virtual Private Gateway (VGW)

Terminates VPN connections (IPSec)

## Transit Gateway (TGW)

Interconnect hub service for VPC-to-VPC & on-prem (IPSec)

Spoke VPC

## CSR-1000v, vMX, SD-WAN & 3<sup>rd</sup> party

Used for transit services & inter-cloud connections (IPSec)

Single & Multi-Region (TGW peering)

Inter-Cloud and Hybrid-Cloud VPN

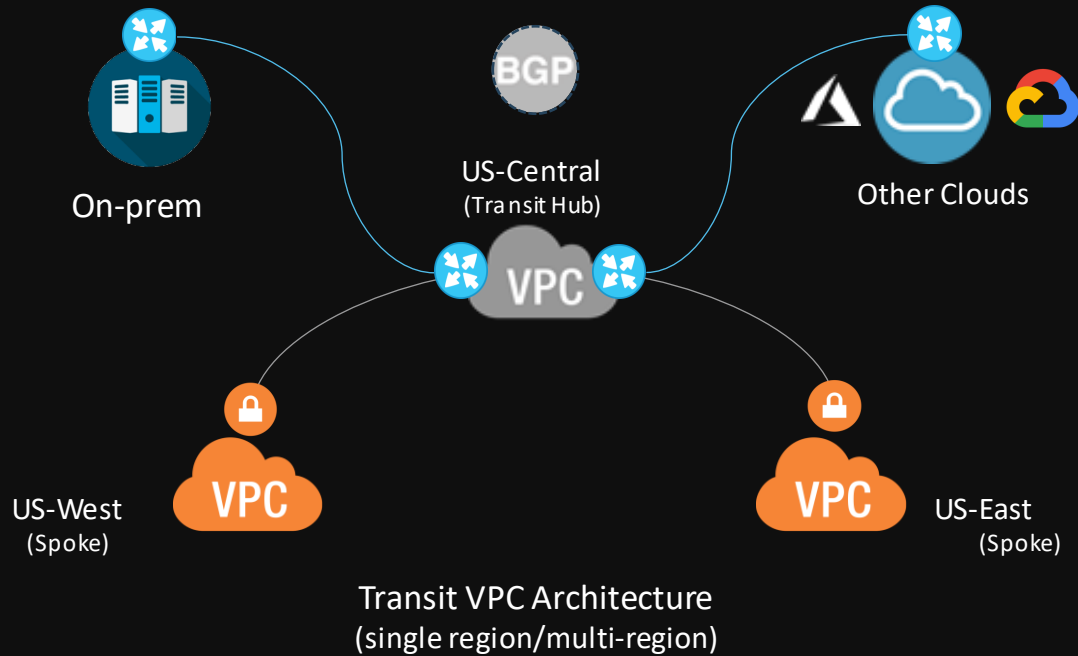

Cloud Provider

Services

# Cloud Networking: AWS

Hub & Spoke – VGW + CSR1Kv

Inter VPC, Inter Region & Inter Cloud connectivity options

 **Virtual Private Gateway (VGW)**  
Terminates VPN connections (IPSec)

 **CSR-1000v & 3<sup>rd</sup> party**  
Used for transit services & inter-cloud connections (IPSec)

1.25Gbps per Tunnel

CSR-1kv management & encryption

 Cloud Provider  
Services

# Cloud Networking: AWS

Inter VPC, Inter Region & Inter Cloud Connectivity Options

Single & Multi-Region

## VPC Peering

Point-to-point connectivity (not very scalable)

TGW Spoke

Hybrid-Cloud VPN & Inter-VPC  
(Hub & Spoke)

## Virtual Private Gateway (VGW)

Terminates VPN connections (IPSec)

## Transit Gateway (TGW)

Interconnect hub service for VPC-to-VPC & on-prem (IPSec)

Spoke VPC

Hub

(Transit VPC)

Single & Multi-Region (TGW peering)

## CSR-1000v, vMX, SD-WAN & 3<sup>rd</sup> party

Used for transit services & inter-cloud connections (IPSec)

Inter-Cloud and Hybrid-Cloud VPN

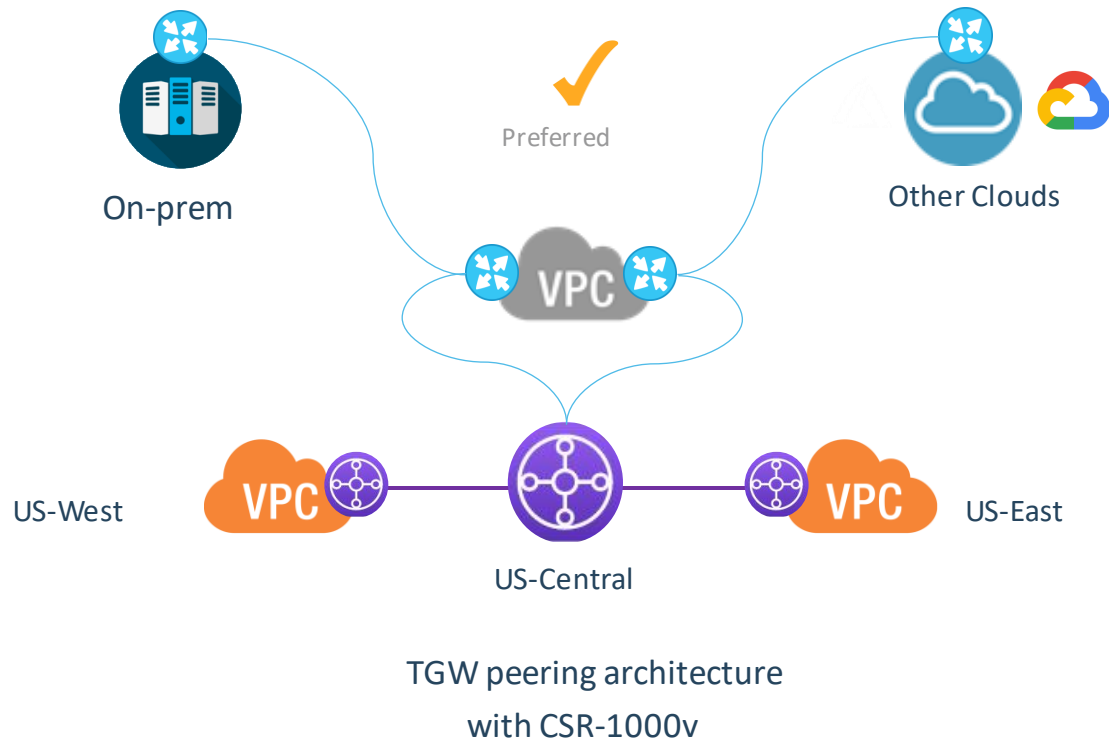

Cloud Provider

Services

# Cloud Networking: AWS

Hub & Spoke – TGW peering + CSR1Kv for Inter-Cloud connectivity

Inter VPC, Inter Region & Inter Cloud connectivity options

50Gbps per attachment

TGW is a native AWS service

-  CSR-1000v, vMX, SD-WAN & 3<sup>rd</sup> party  
Used for transit services & inter-cloud connections (IPSec)
-  Transit Gateway (TGW)  
Interconnect hub service for VPC-to-VPC & on-prem (IPSec)

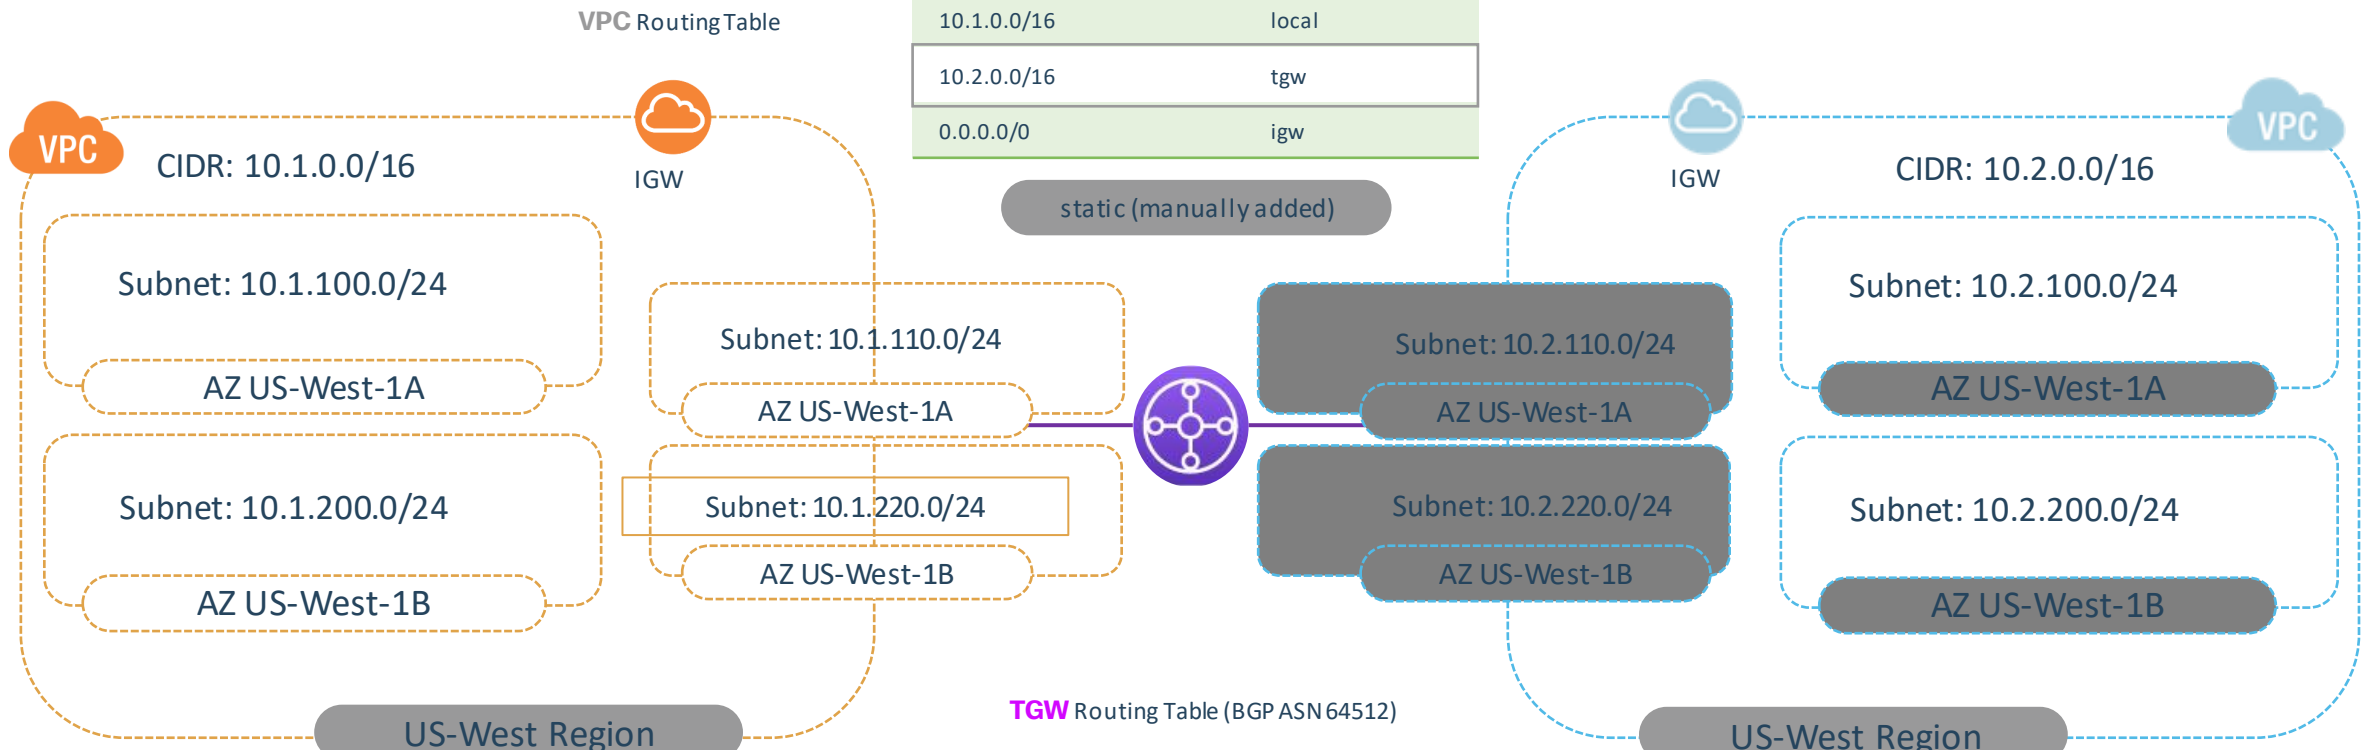

# Cloud Networking: AWS

## Transit Gateway (TGW)

Interconnect hub service for VPC-to-VPC & on-prem (IPSec)

Destination	Target
10.1.0.0/16	local
10.2.0.0/16	tgw
0.0.0.0/0	igw

static (manually added)

**TGW Routing Table (BGP ASN 64512)**

Destination	Target
10.1.0.0/16	tgw-attach-vpc1
10.2.0.0/16	tgw-attach-vpc2

\* This scenario assumes the same AWS account. When using different accounts, Resource Access Manager configuration is needed to share the same TGW between them

# Cloud Networking: AWS

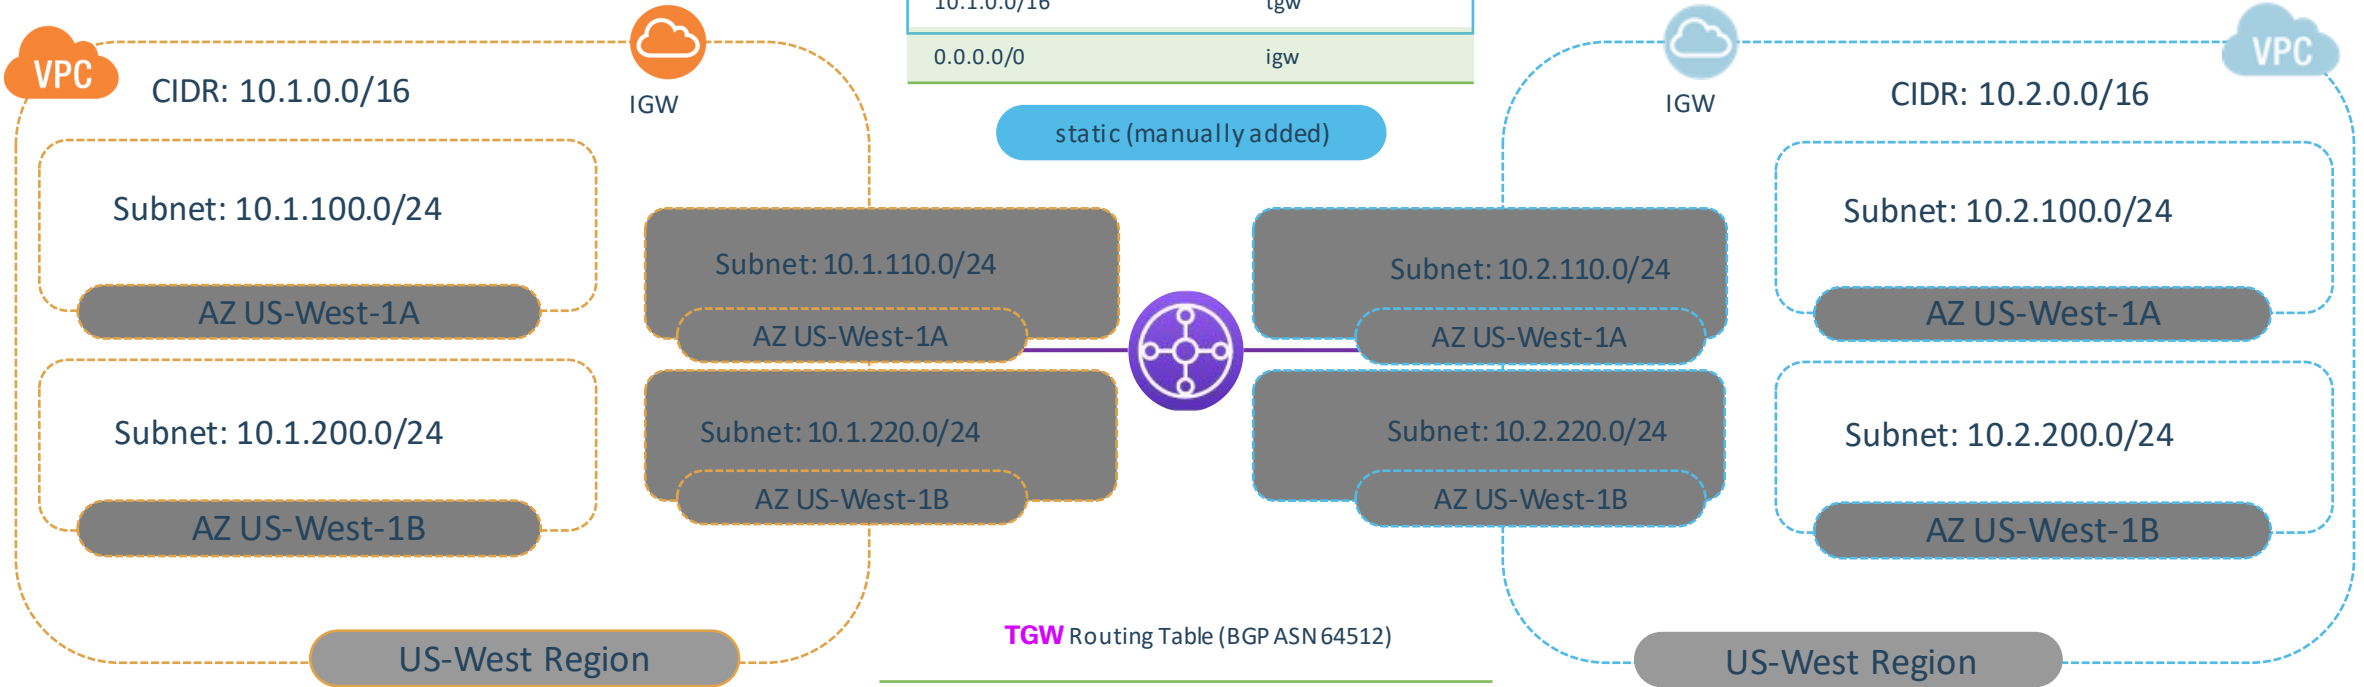

## Transit Gateway (TGW)

Interconnect hub service for VPC-to-VPC & on-prem (IPSec)

Destination	Target
10.2.0.0/16	local
10.1.0.0/16	tgw
0.0.0.0/0	igw

static (manually added)

**TGW Routing Table (BGP ASN 64512)**

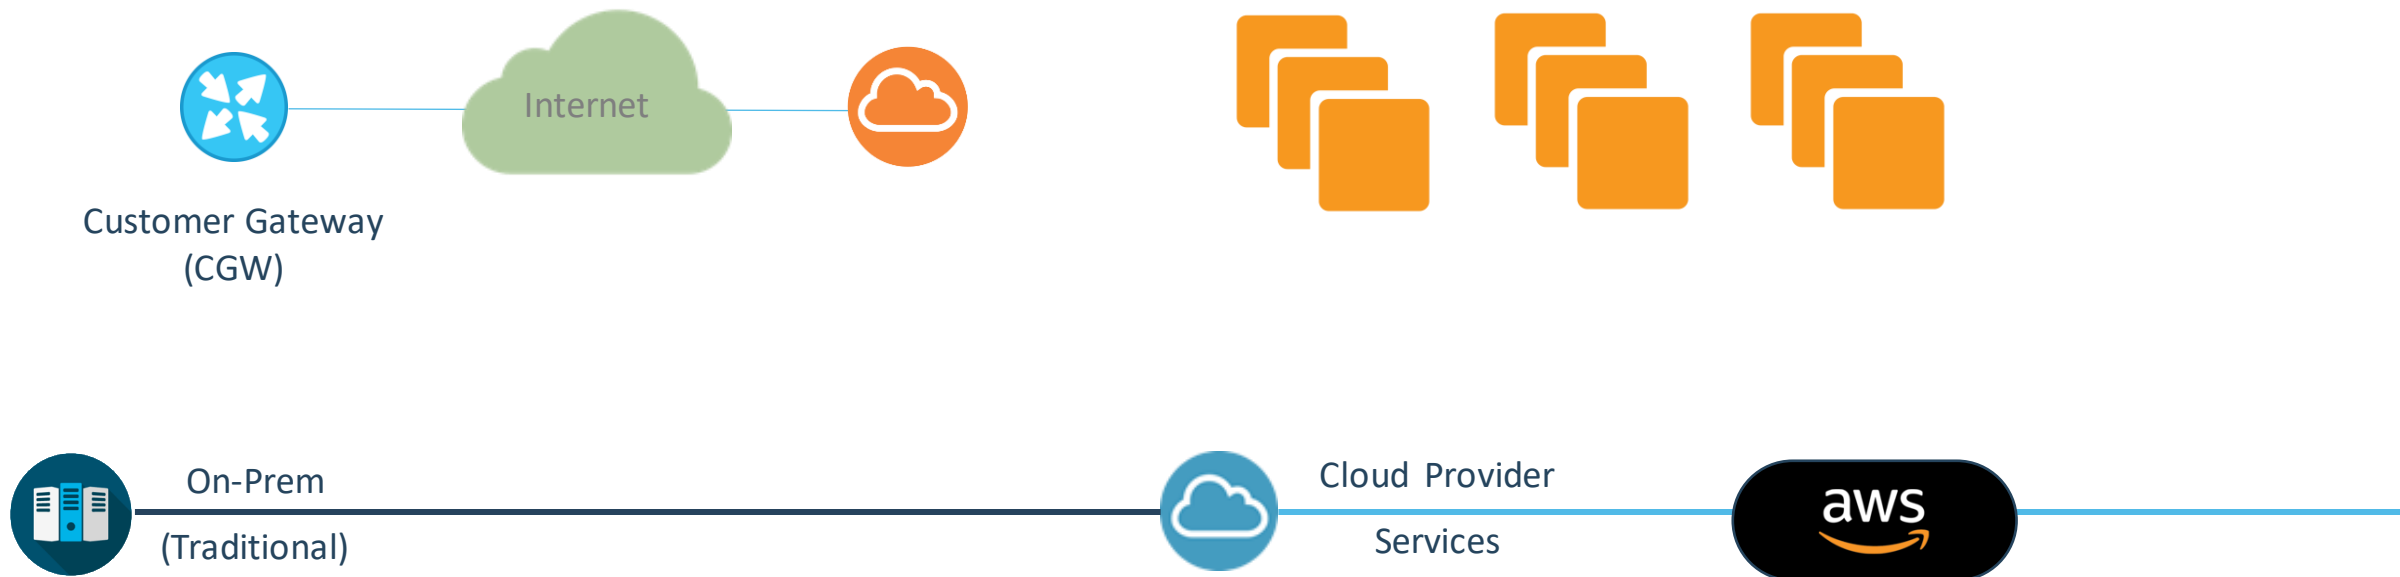

Destination	Target
10.1.0.0/16	tgw-attach-vpc1
10.2.0.0/16	tgw-attach-vpc2

\* This scenario assumes the same AWS account. When using different accounts, Resource Access Manager configuration is needed to share the same TGW between them

Hybrid-Cloud Connectivity

# Multi-Cloud Networking

# Conhecendo Cloud ACI

Do básico às nuvens

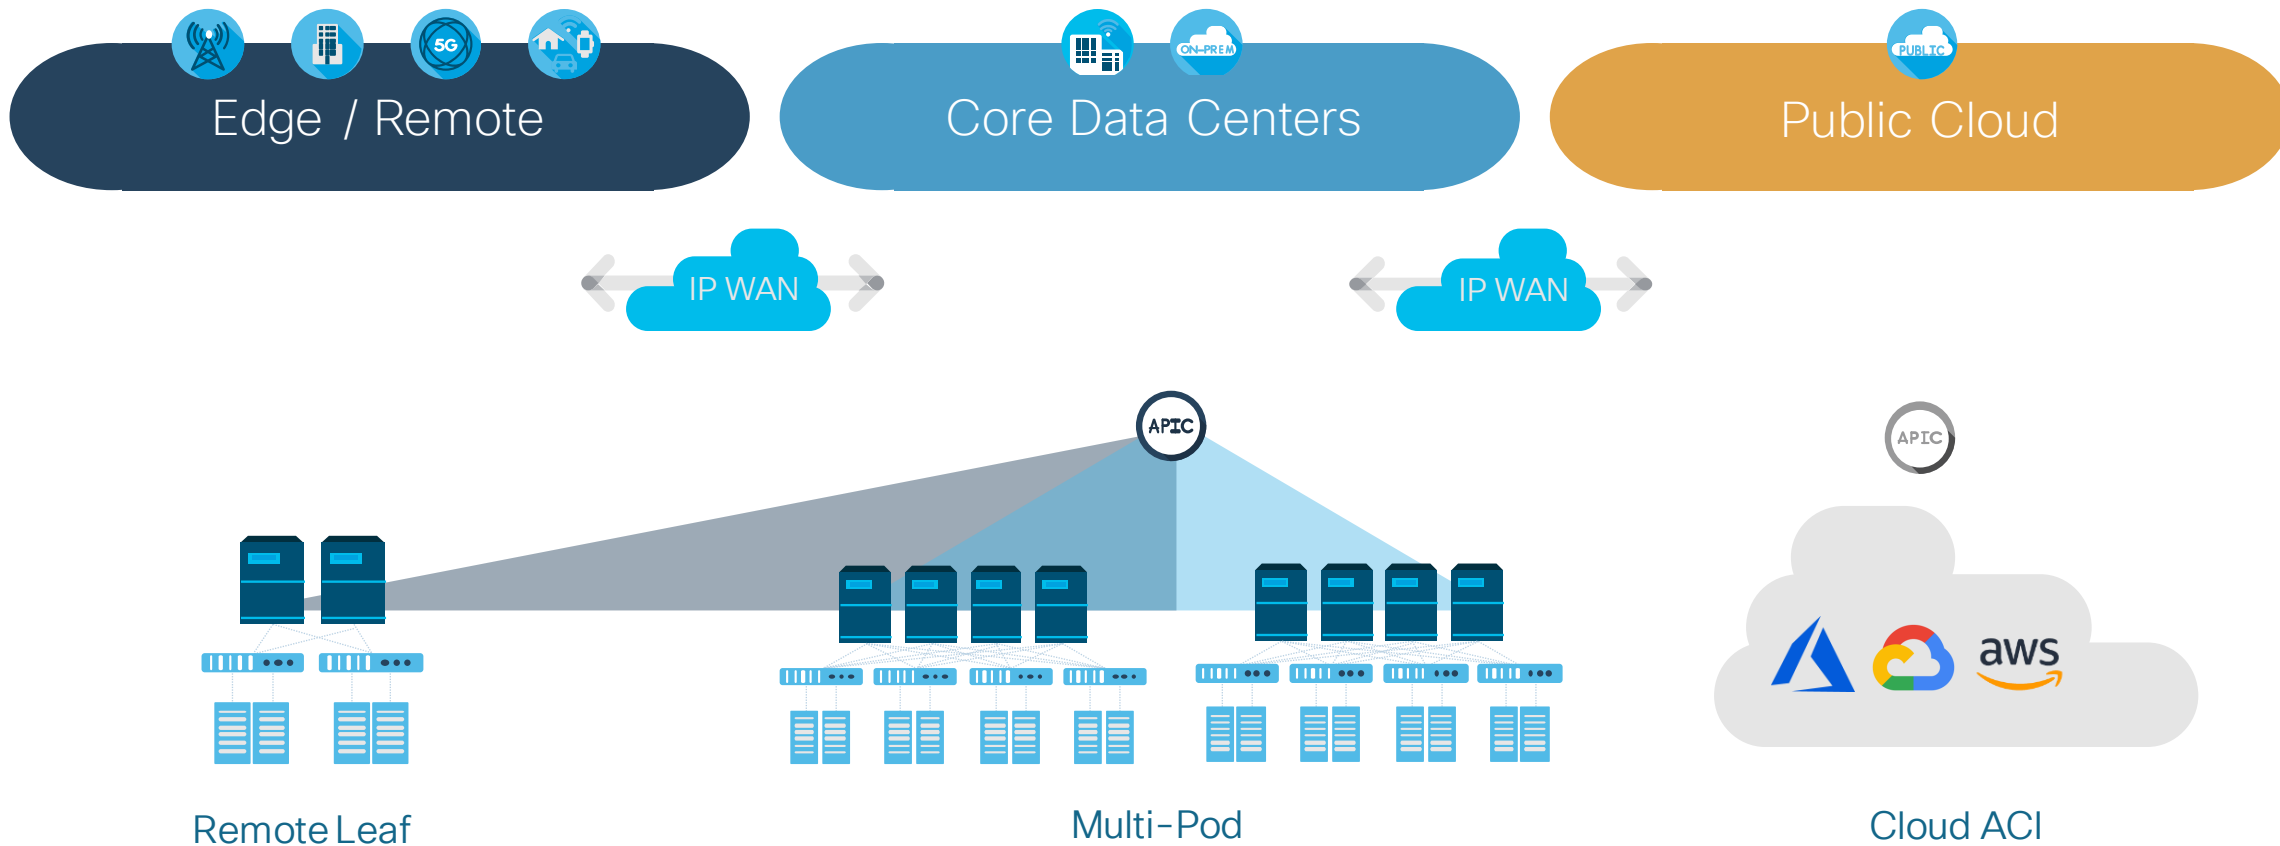

# ACI: One Network, any location

\* Google Cloud in Roadmap

# ACI Anywhere

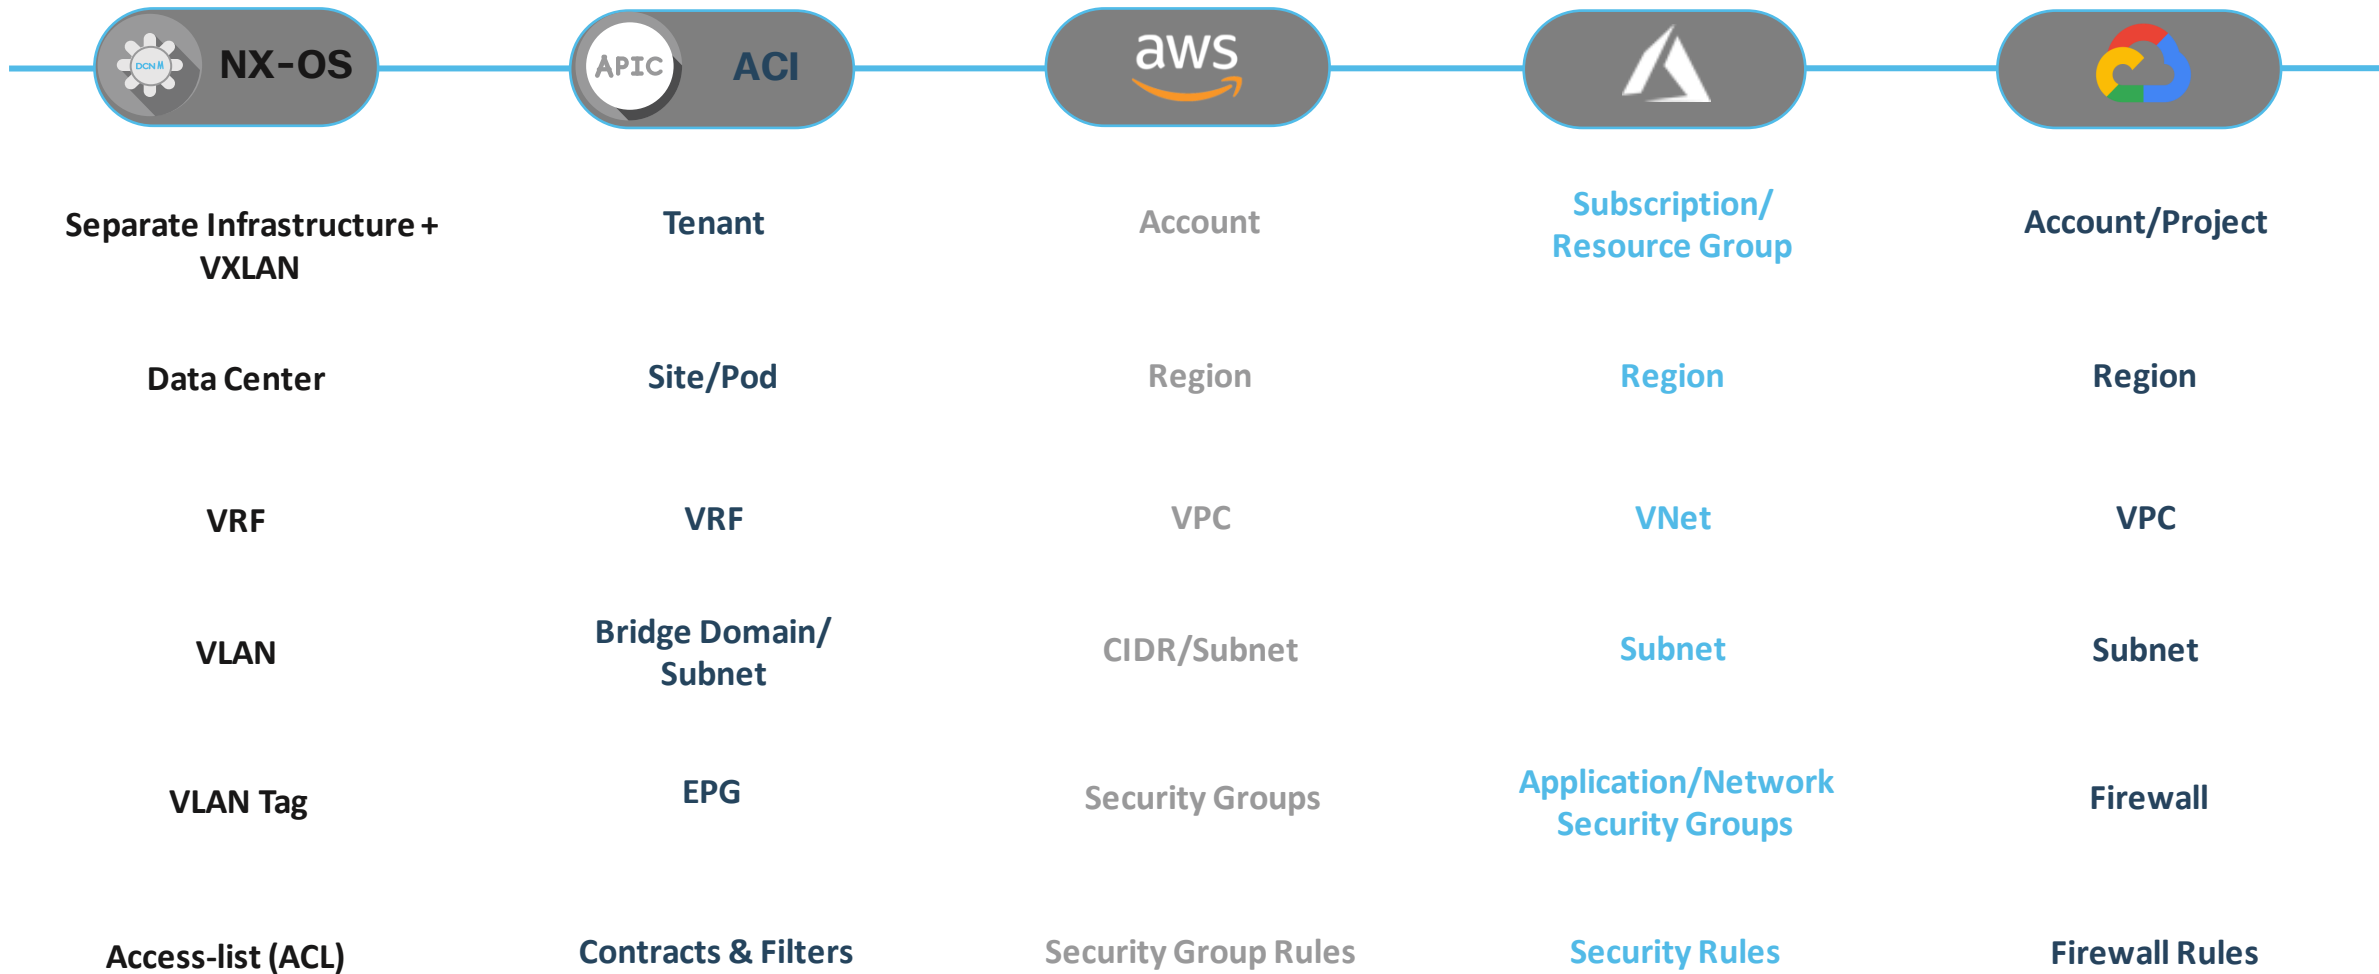

Consolidate and normalize network operations

Anywhere!

\*Google Cloud 2021

# The network-admin challenge

Provisioning and monitoring complexity = Risk

# Cloud ACI: Accelerate cloud adoption

**In-Cloud** networking services automation

**Same** provisioning model

**Same** operational model

**All** cloud-native services available

# ACI

## Automated

Interconnect, routes, VXLAN/BGP, VPC, TGW, VNet, CSR1K, L4-L7 & more

## Configure once

Deploy anywhere (regions, AZs, VPCs, and clouds\*) consistently

## Secure

Policy normalization, monitoring and encryption

\*Multi-Cloud configuration requires Nexus Dashboard Orchestrator

Quint@s Quinze

# What are the differences between running

## API on-prem and in the cloud?

# On-prem ACI

# Cloud ACI

Server Cluster = ACI Site  
Runs on 1,3 or more physical servers/VMs

Automated Connectivity  
Consistent Operations

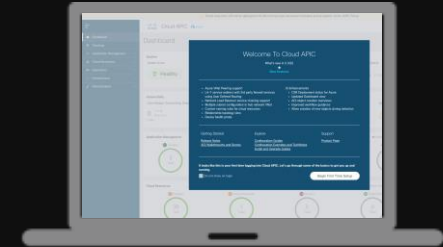

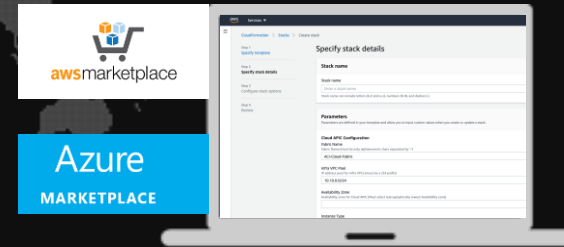

Cloud APIC = ACI Site  
Runs in a Cloud Region as VM/Instance

Starting Setup Utility

Setup Wizard

Cloud APIC deployment settings

Setup Wizard

Set password, VTEP pool, etc  
Covered in Module 1: Episode 2

Set DNS, NTP, BGP AS, etc  
Covered in Module 1: Episode 5

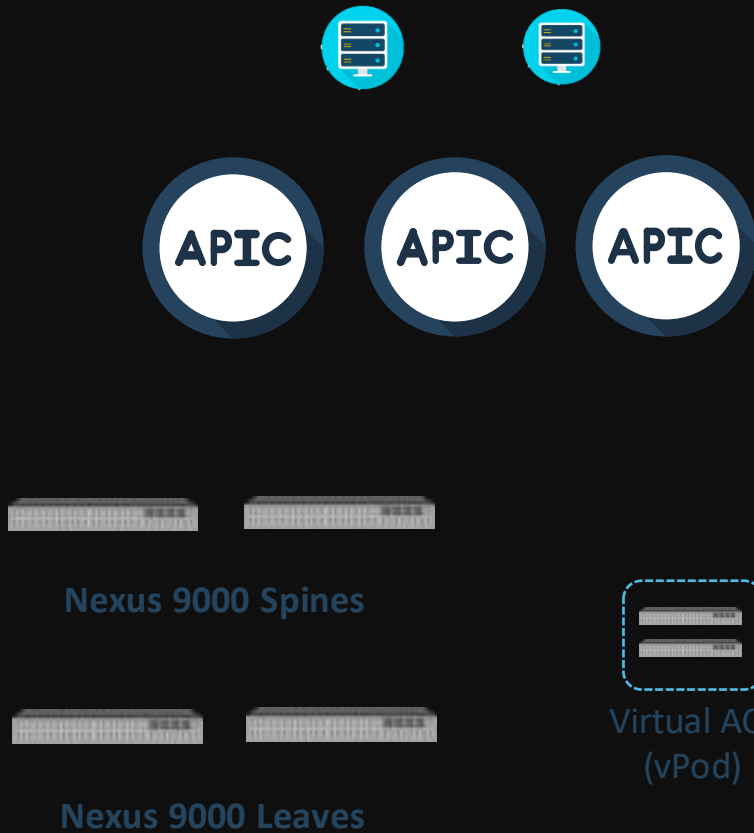

Set password, Infra pool, Key Pair to use (SSH), etc

Set DNS, NTP, BGP AS, regions to manage, etc

# On-prem ACI

# Cloud ACI

Automated **Connectivity**  
Consistent **Operations**

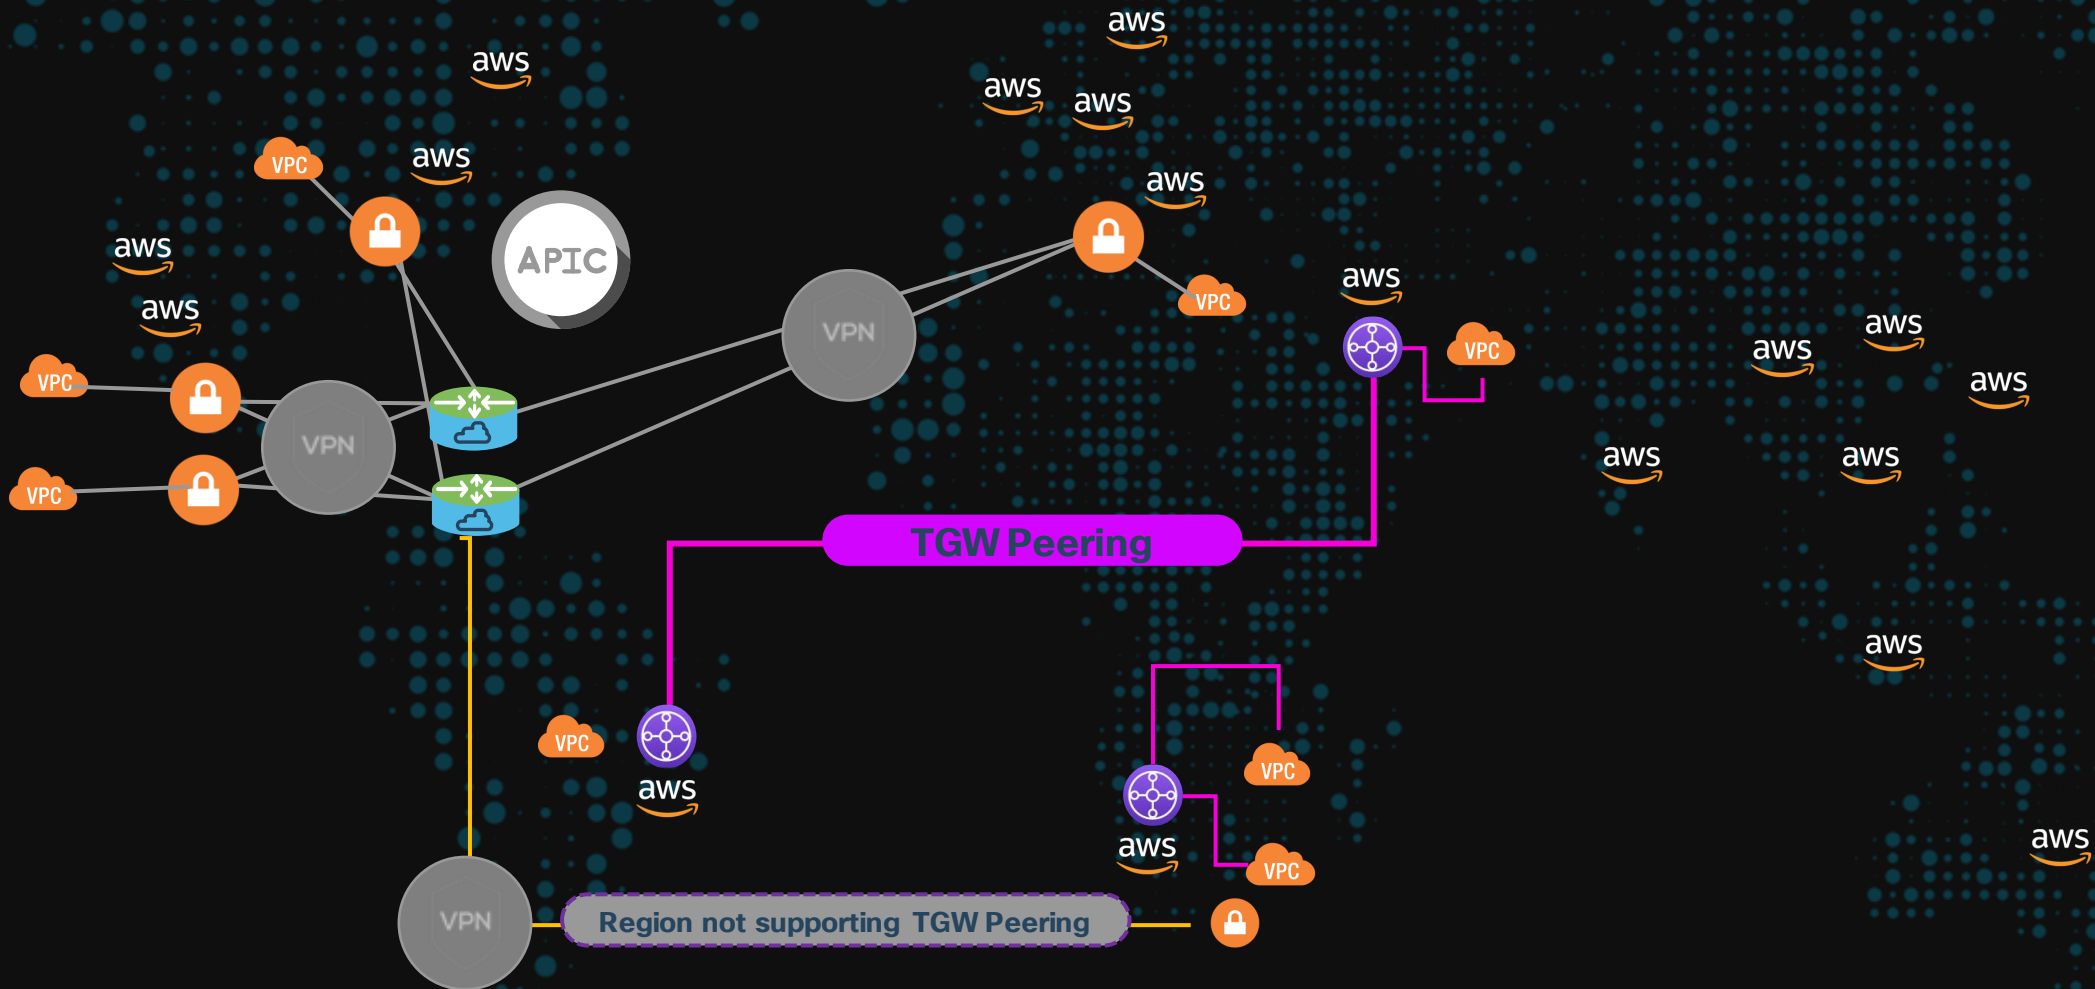

- No Cisco hardware or hypervisor needed
- Runs on Cloud Infrastructure natively
- Automates and Secures Cloud Connectivity Instance/VMs and Services across VPCs/VNets, & Regions

# How is connectivity automated and secured without Spine or Leaf Nodes?

Single APIC can manage multiple AWS regions

Cloud ACI

Automated TGW, VGW, CSR, Routes and VPN deployment

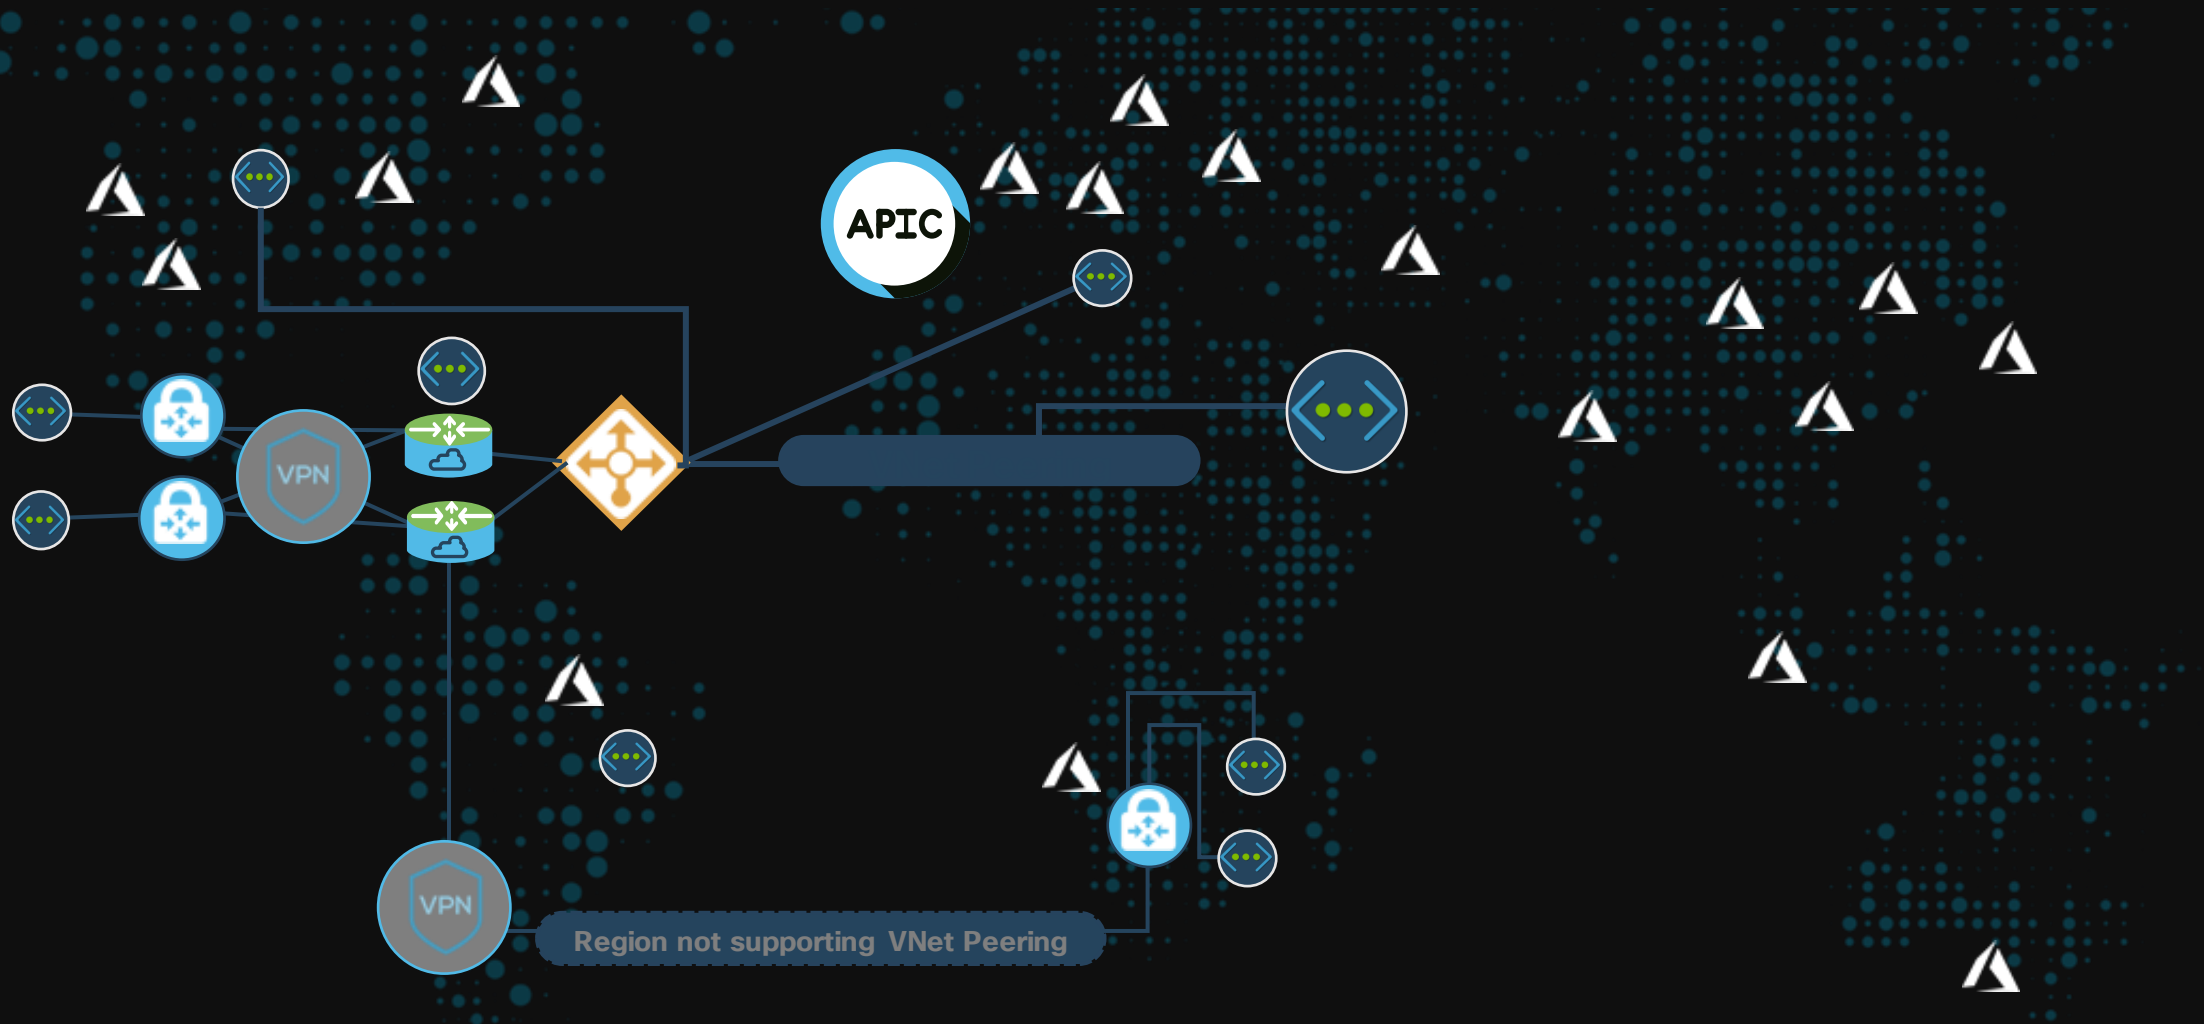

\*Other topologies available

Quint@S Quinze

Single APIC can manage multiple Azure regions

Cloud ACI

Automated VNet Peering, VNG, CSR, NLB, UDR and VPN deployment

\*Other topologies available

Quint@S Quinze

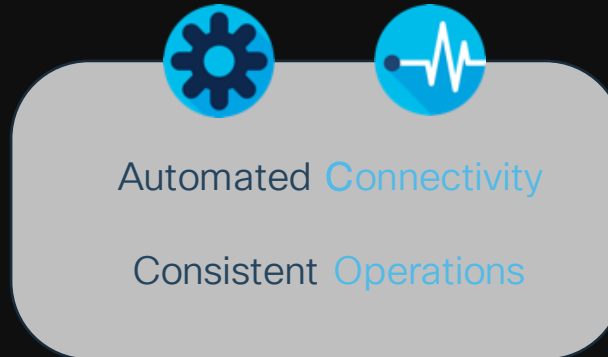

# How is the logical network configuration different in Cloud **ACI**?

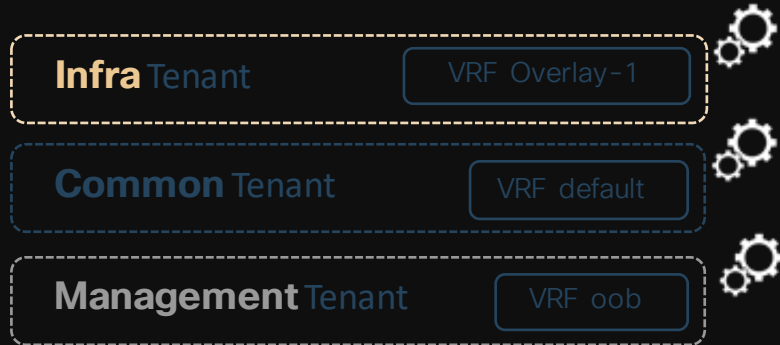

# On-prem ACI

# Cloud ACI

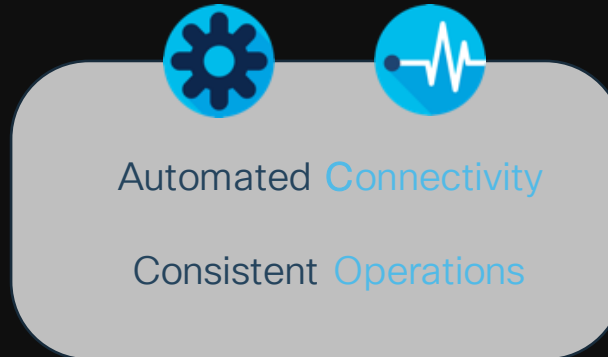

## Default Tenants

# On-prem ACI

# Cloud ACI

Infra CIDR, Subnets defined through the Deployment Setup

Regions to manage, deployment type and BGP AS defined during Initial setup

Common tenant is also available to be used

# On-prem ACI

# Cloud ACI

Infra Subnet defined through the Deployment Setup

Regions to manage, deployment type and BGP AS defined during Initial setup

Common tenant is also available to be used

# Logical Network

5 Steps

1

Create Tenant, VRF

2

Create Application Profile

3

Create EPGs

4

Create Contracts

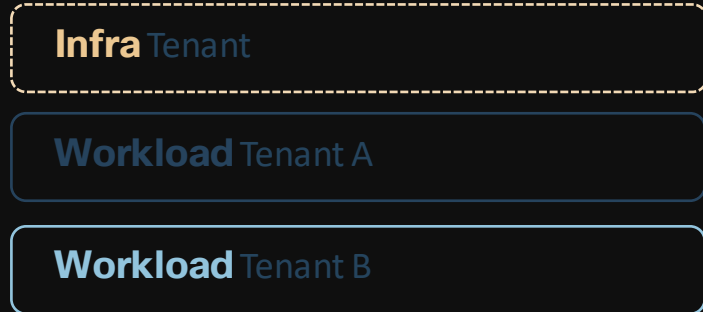

5

Create External (L3 Out) EPG

# On-prem ACI

# Cloud ACI

Cloud APIC automatically configures the Workload Tenant network

For that to work, the right privileges need to be set in the tenant account/RG

# Logical Network

5 Steps

1

Create Tenant, VRF and Cloud Context

2

Create Application Profile

3

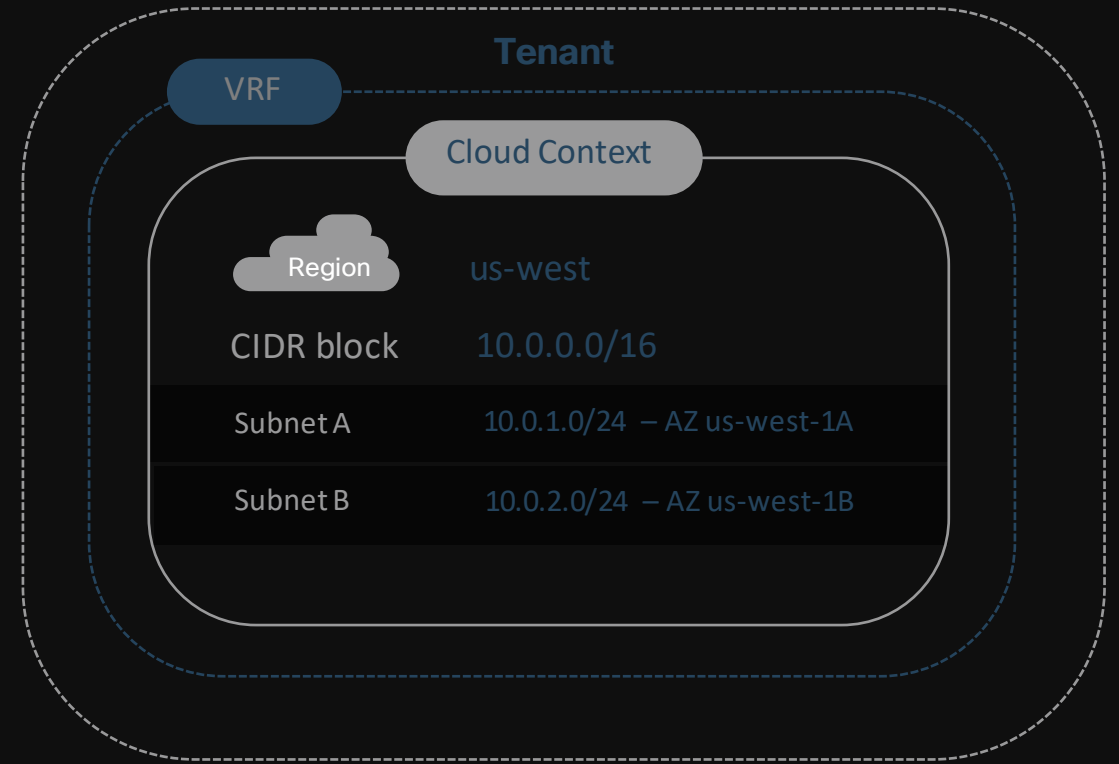

Create EPGs

4

Create Contracts

5

Create External (L3 Out) EPG

aws

Time-to-Value

Maximize Cloud-Native Services

24x7 Operations

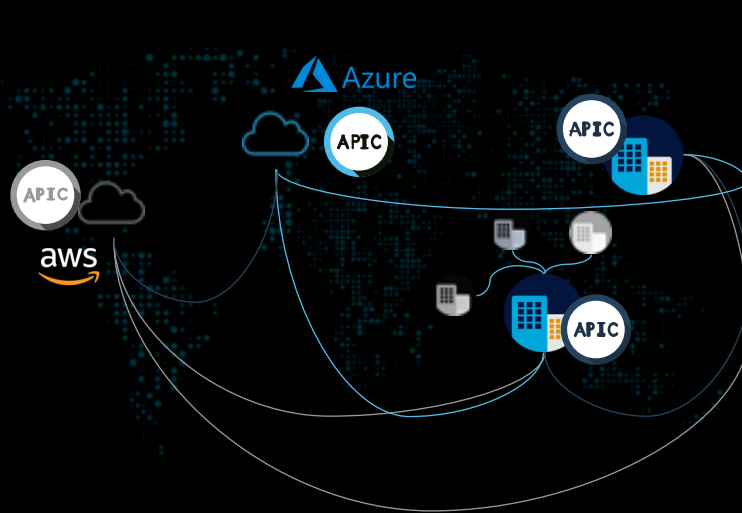

# Multi-Site ACI

On-Prem & Cloud

Business continuity/DR/DRaaS

DC/Cloud Interconnect

VM Mobility & Cloud Migration

Routed network requirements: MTU  $\geq 1500$  and  $< 1s$  RTT between APIC & NDO

**Automate** Cloud and DC Interconnect. Provision **once**, deploy **anywhere**

# Multi-Site ACI

Hybrid Cloud

Up to 12 Sites

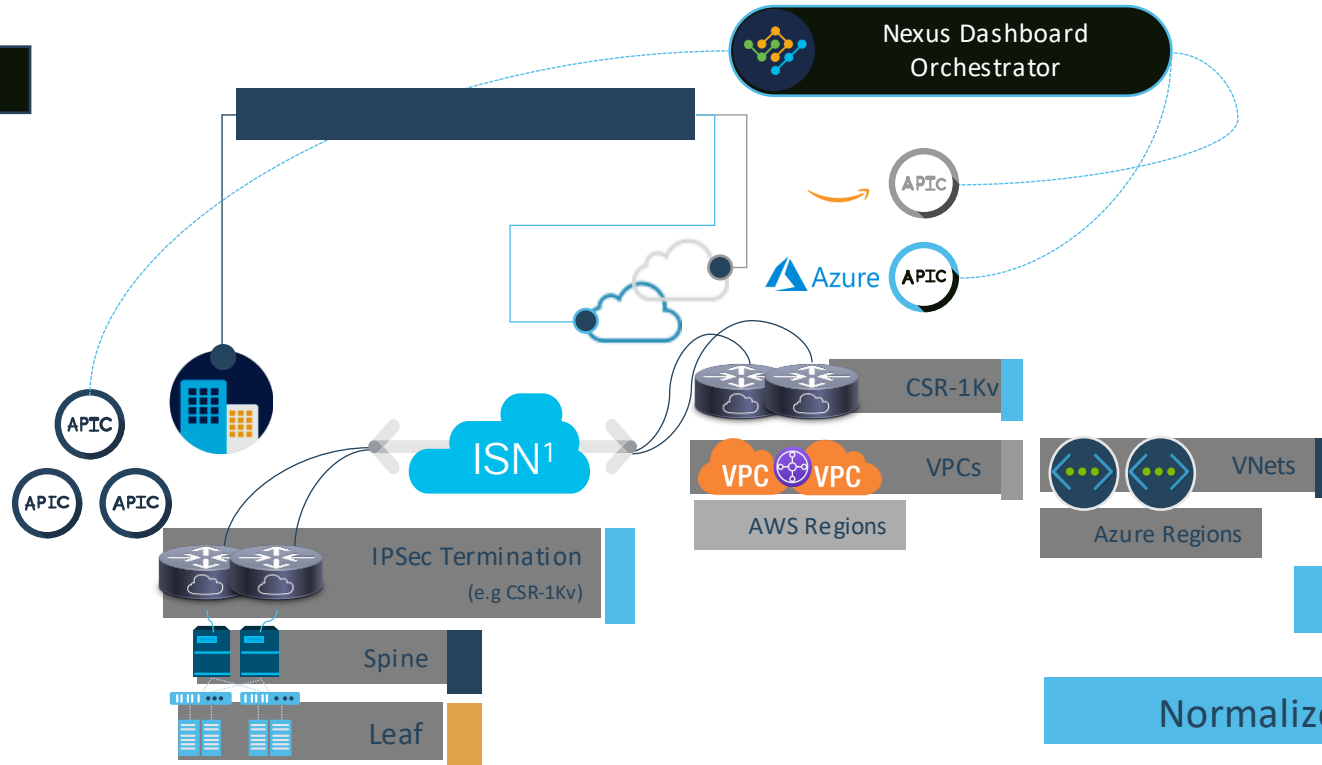

## On-prem requirements and considerations:

Inter-Site Network required<sup>1</sup>

IPSec on-prem termination device(s) are required. IPSec Configuration can be downloaded from NDO

MP-BGP, VXLAN, routes and OSPF configurations are automated by NDO

Common deployments

DRaaS

Cloud Migration

On-Prem-Cloud Integration

Normalize operations and security policy

## Simplify and accelerate your journey to the cloud

<sup>1</sup> ISN may traverse the Internet or use a dedicated connection (AWS Direct Connect/Express Route)

\*In addition to Jumbo Frames (1550+ MTU) and 1 second RTT from Nexus Dashboard NDO to APIC

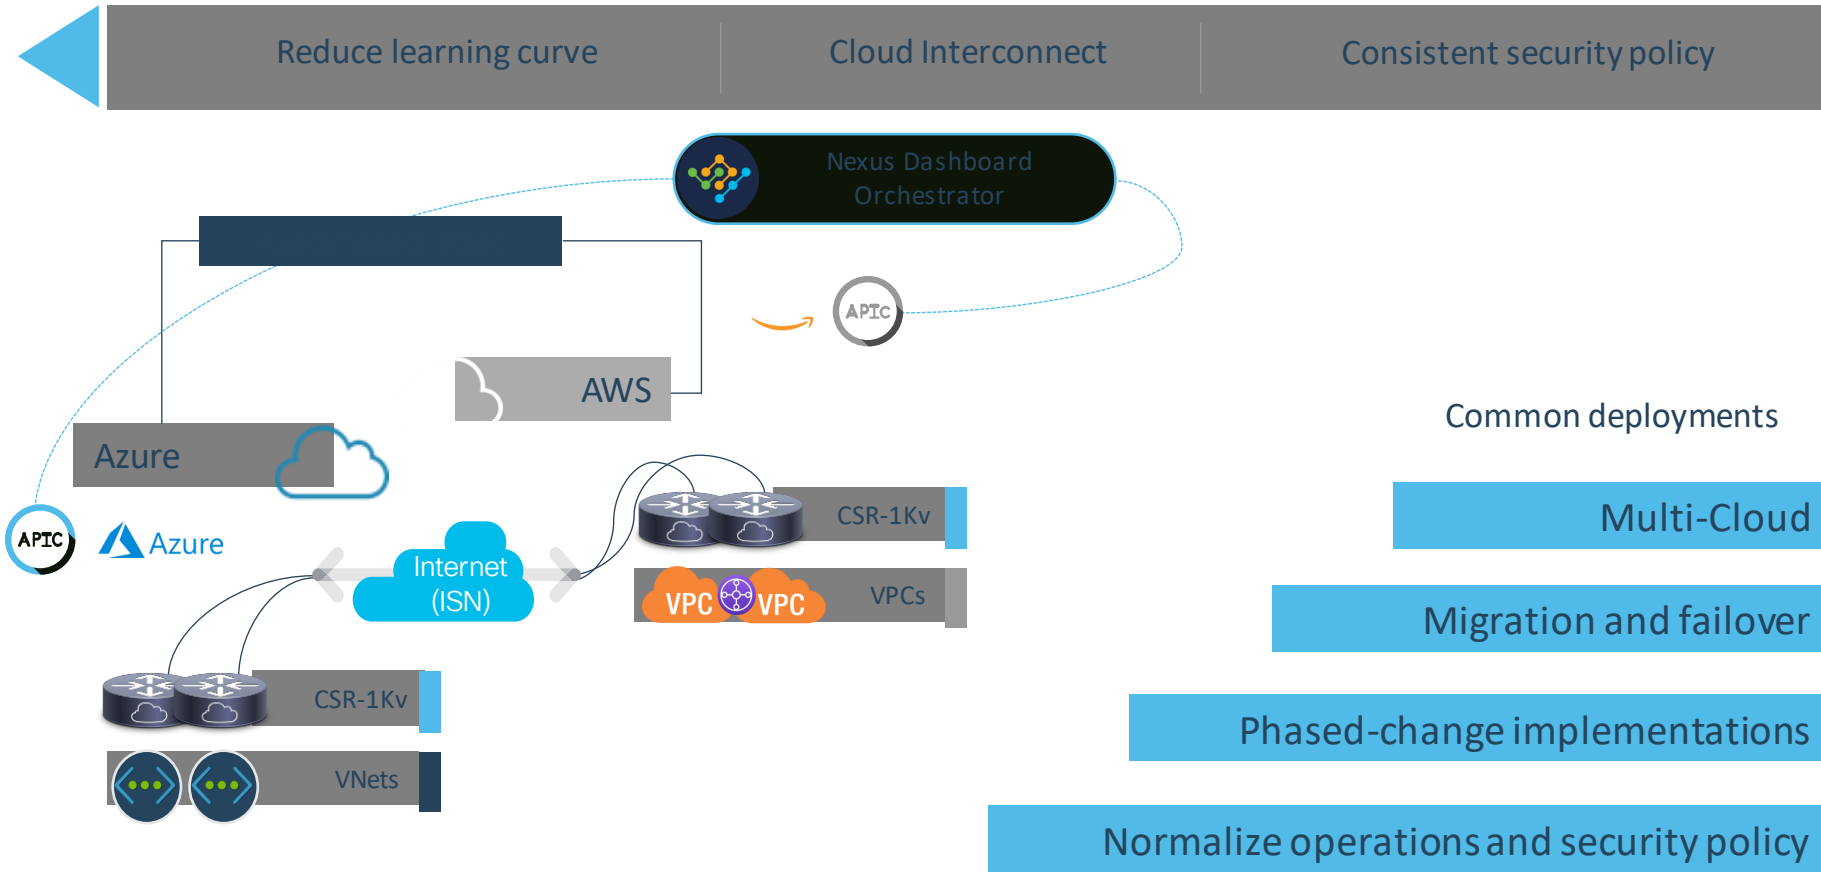

# Multi-Site ACI

Cloud Only

Up to 12 Sites

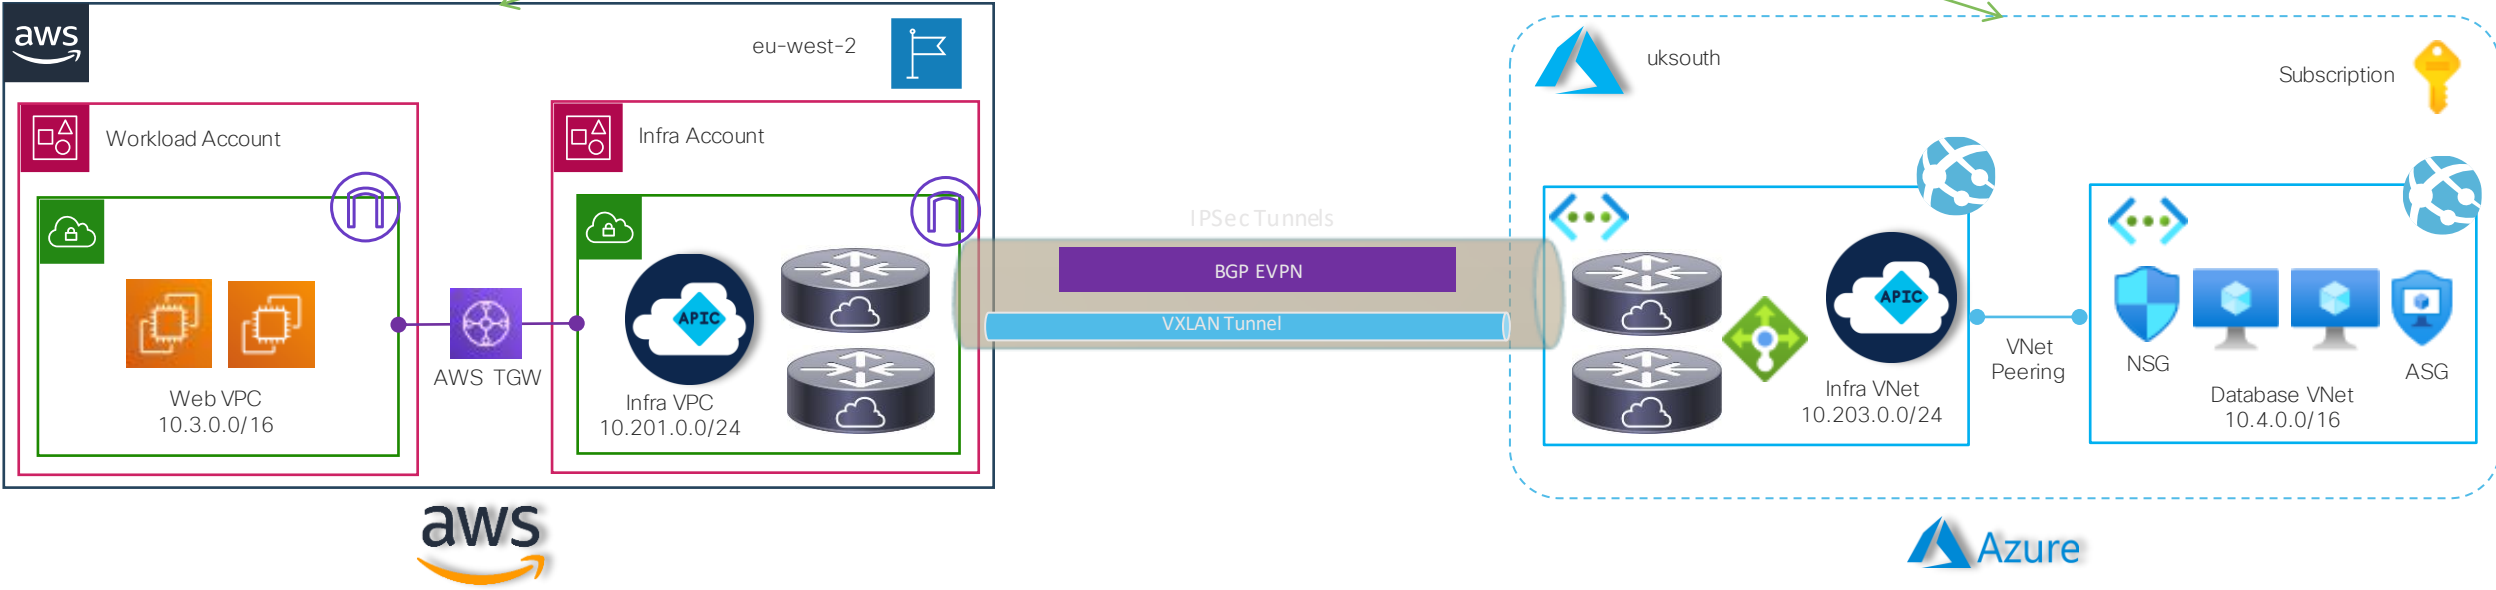

Cisco CSR-1000v is deployed and configured automatically in Cloud ACI

IPSec, MP-BGP, VXLAN, routes and OSPF configurations are automated by Nexus Dashboard NDO

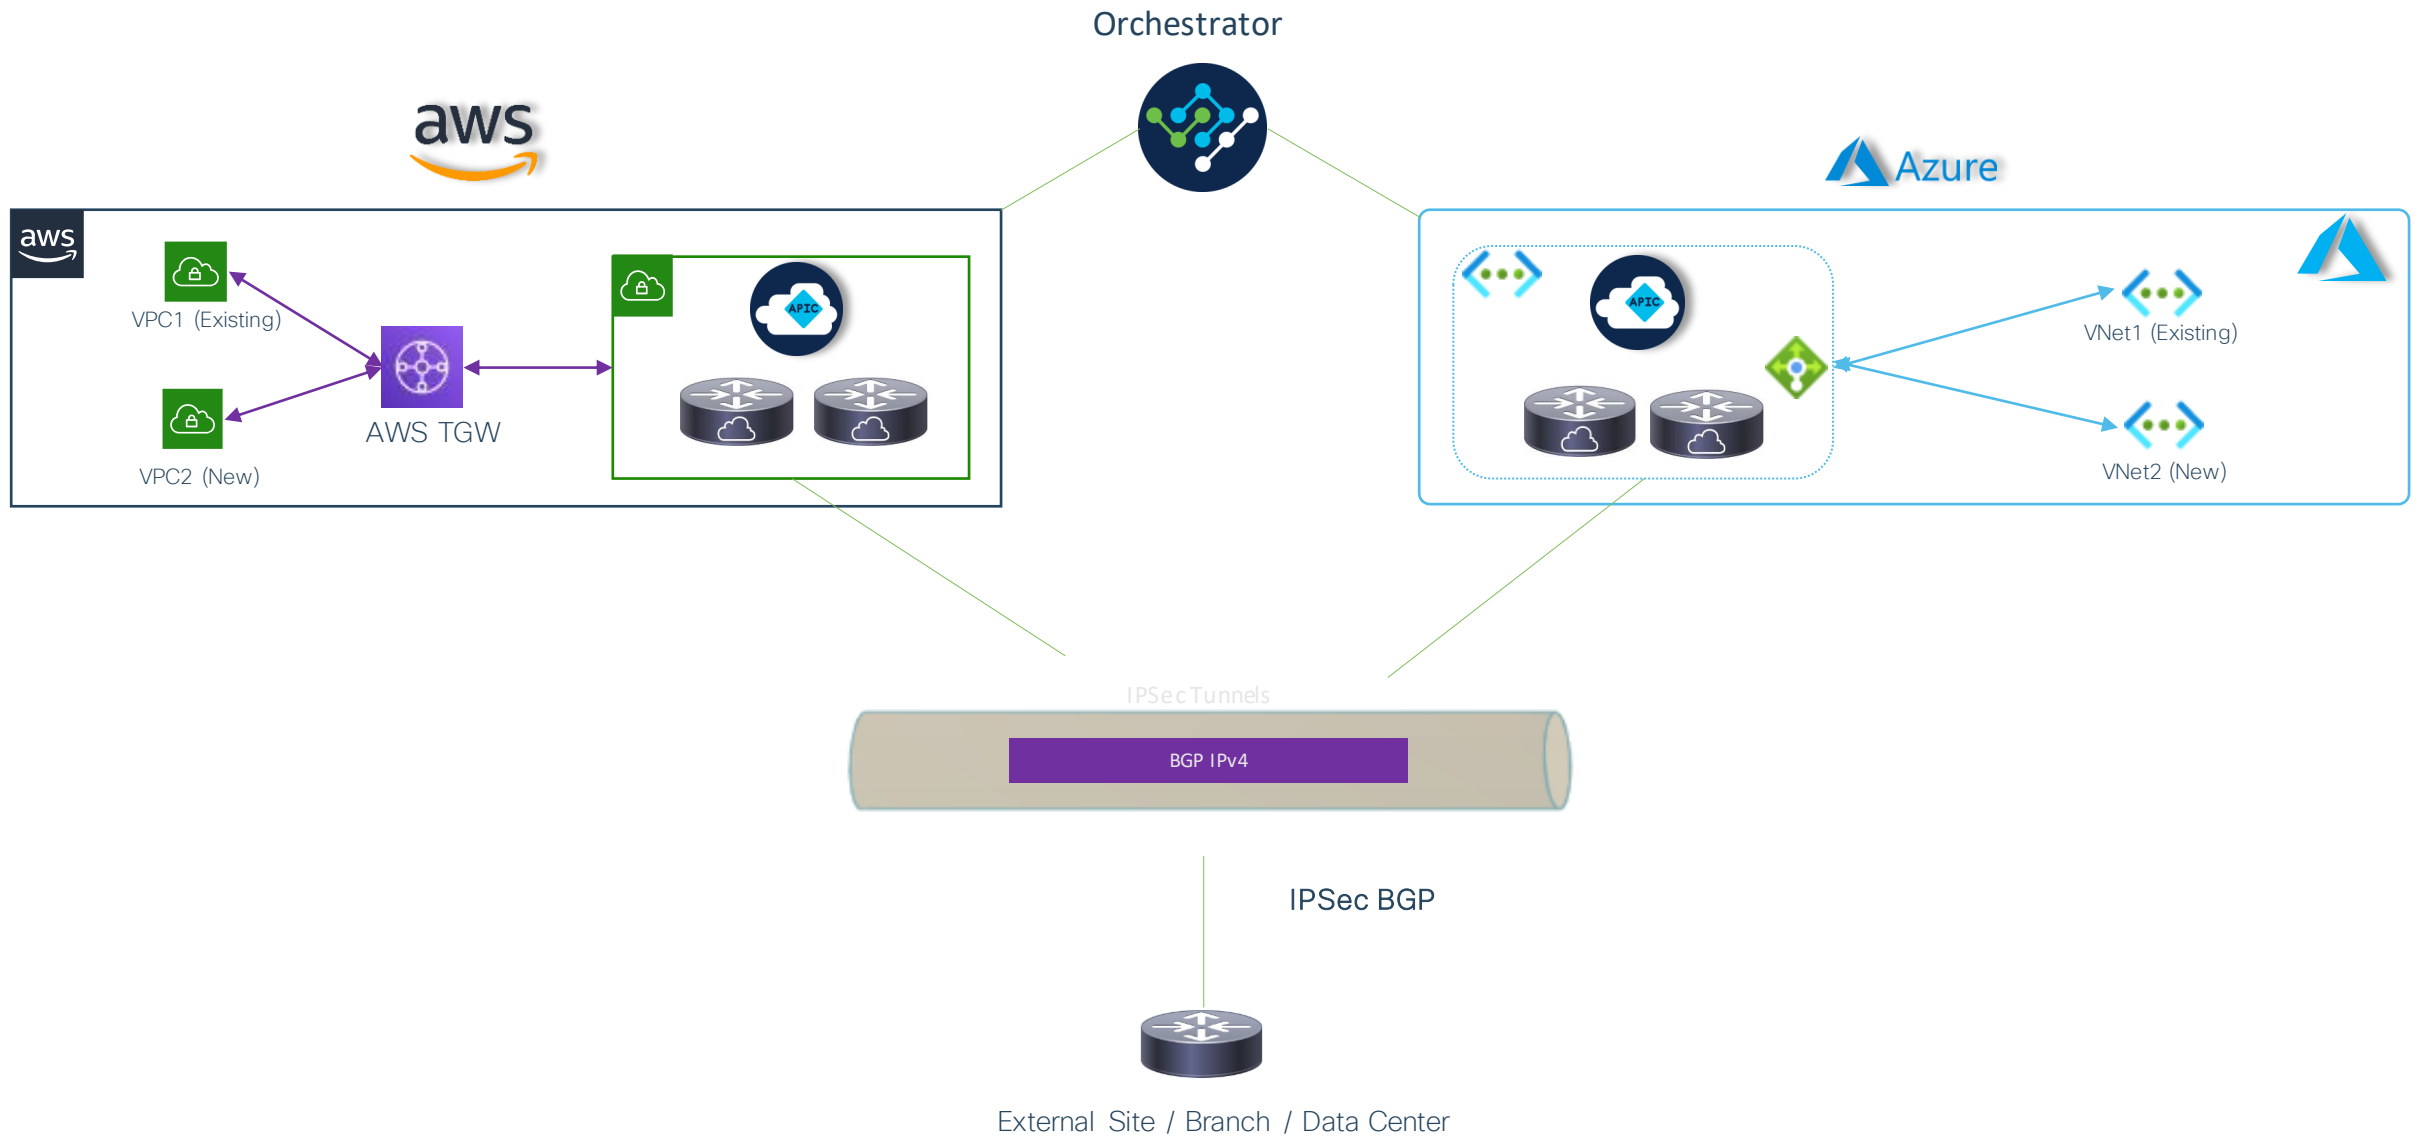

**Simplify, automate and normalize** Multicloud operations

# Orchestrator

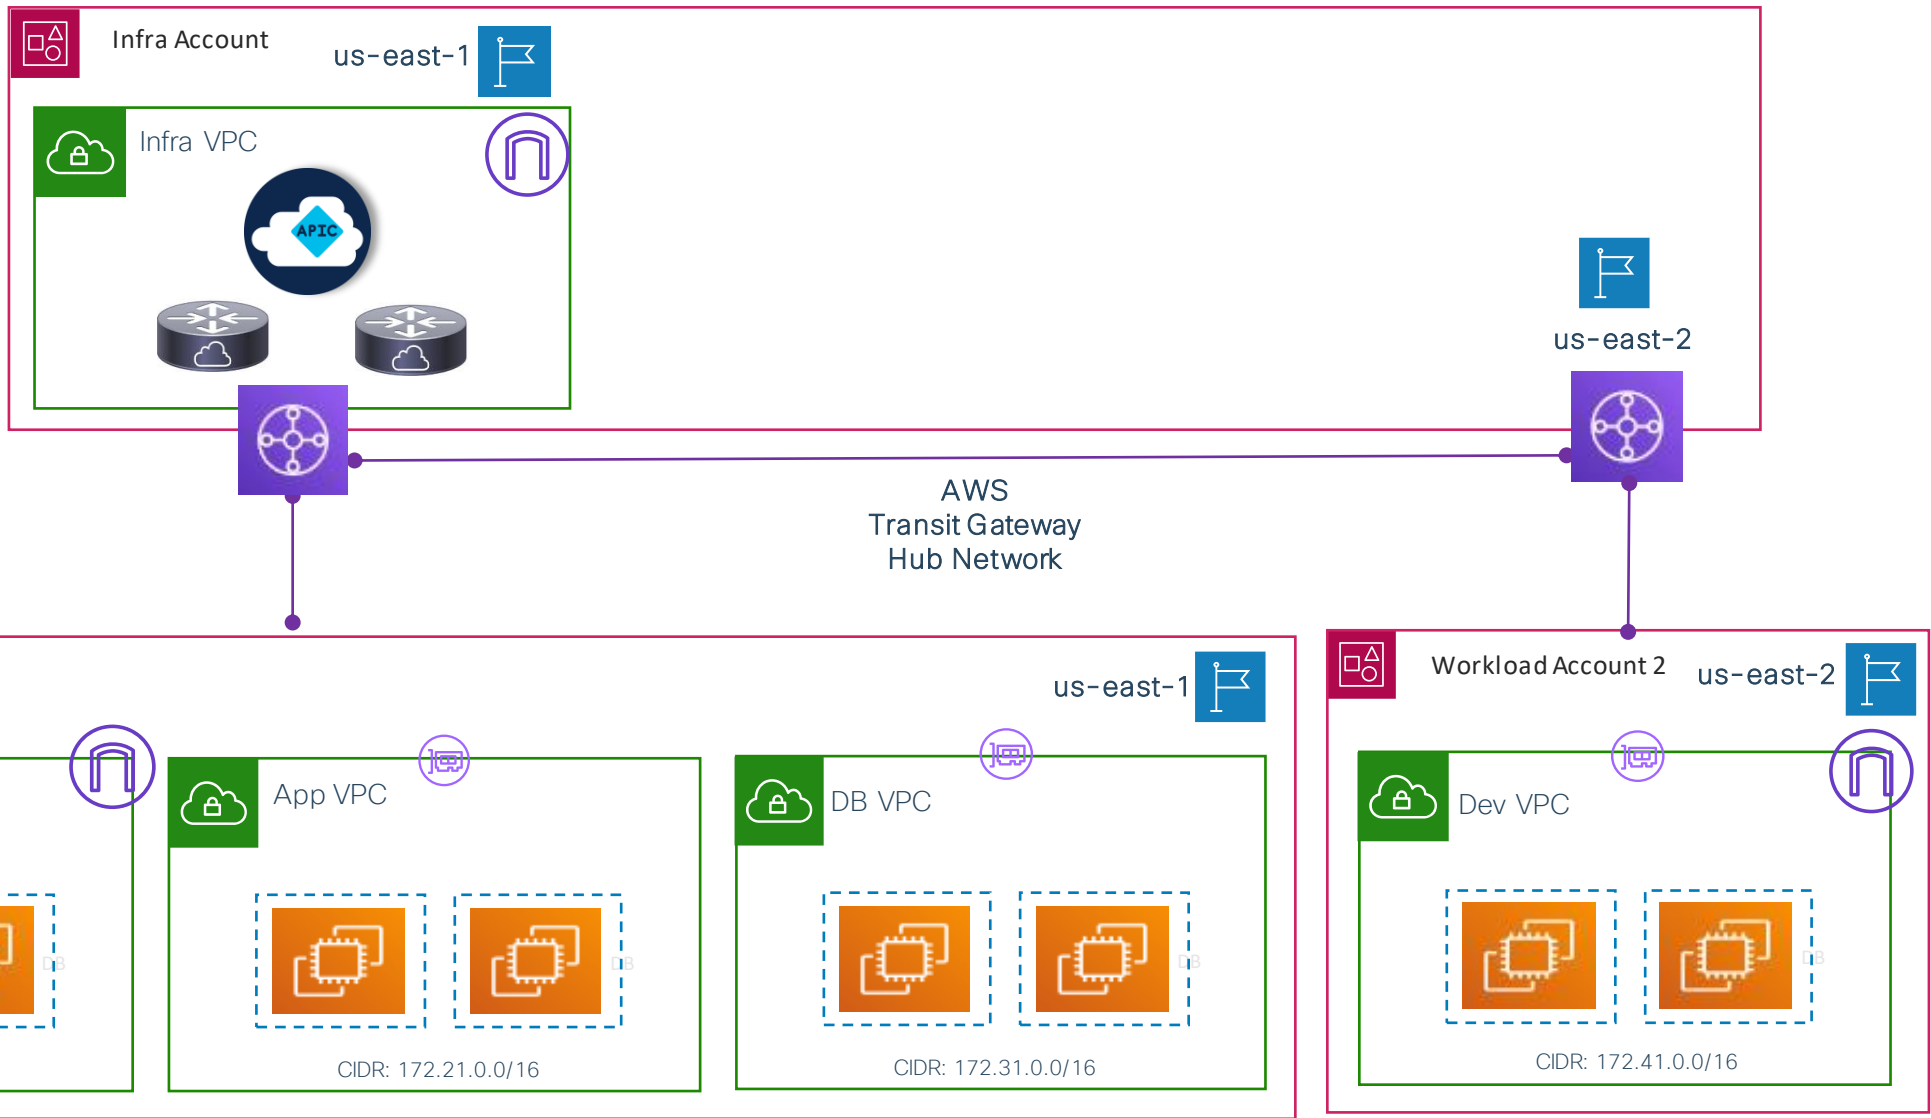

ACI Multi-Cloud between AWS and Azure with BGP EVPN (policy stretch)

Automating External Connectivity to AWS and Azure with IPsec BGP on Cloud Router or TGW
