

Captive Portal Configuration on WAP121/321

The captive portal allows an administrator to block clients connected to the WAP network. Clients see a special web page for authentication purposes before they are allowed to use the internet normally. Captive Portal verification is for both guests and authenticated users. Captive portal makes use of the web browser and turns it into an authentication device. Captive portals are specially used at many Wi-Fi hotspots to charge users to get access to the internet.
