

## The future of automated network and service assurance

Accedian Skylight

Henrik Nydell  
Senior Product Manager  
2022-May-12

The Accedian logo, featuring the word "ACCEDIAN" in a bold, orange, sans-serif font. The background of the slide is dark blue with a pattern of light blue network diagrams and icons, including a central diamond-shaped network diagram with various colored nodes and connections.

A long, empty highway at night, illuminated by warm, orange-red lights. The road is flanked by large, curved arches that create a tunnel-like effect. The arches are supported by vertical pillars and are lit from within, casting a glow on the road. The road itself has a central median and lane markings. The overall atmosphere is mysterious and futuristic.

What is **ACCEDIS** Sky Night?

# SKYLIGHT

## Performance Visibility

### Skylight Performance Analytics

Micro Detail

Macro View

ML

Automation

Cloud-native set of microservices for real-time metrics aggregation, analysis, correlation, alerting and mediation

### Skylight Orchestrator

Scalable

3<sup>rd</sup> Party

APIs

Orchestration & management of all Skylight sensors; APIs and third party telemetry ingestion

### Skylight Sensors

Agent

SFP compute

Modules

Capture

Distributed software and hardware components instrumenting the network and service

## Form of instrumentation

## Far-end test point

## Skylight sensors

Container

VM VNF

SFP Compute

Skylight sensor

Standard reflector

3<sup>rd</sup> party service

CNF – containerized micro service

VNF – VM-based mass actuation

PNF – pluggable “Smart” modules

Test types ranging from L2-L7, continuous or one-shot.

# Active test methods and examples

## Bookended - could be vendor proprietary

- Accedian 2xOneWay
- TCP transfer
- UDP transfer

# Skylight sensor agent - CNF

Agent component running in any virtualized environment

- Docker container on Linux OS  
Ubuntu, Debian, Red Hat, ...  
Both physical and virtual (Cloud service) virtual machines
- Pod on Kubernetes services AKS & GKE  
Google GKE      Amazon AKS   Red Hat OpenShift   Vanilla K8S
- Docker container on network devices (vCPE, uCPE, x86 routers)  
IOS XR / XE      Cradlepoint & ARM platforms (rPi)  
Juniper NFX      Versa & Velocloud under test

# Skylight sensor agent - CNF

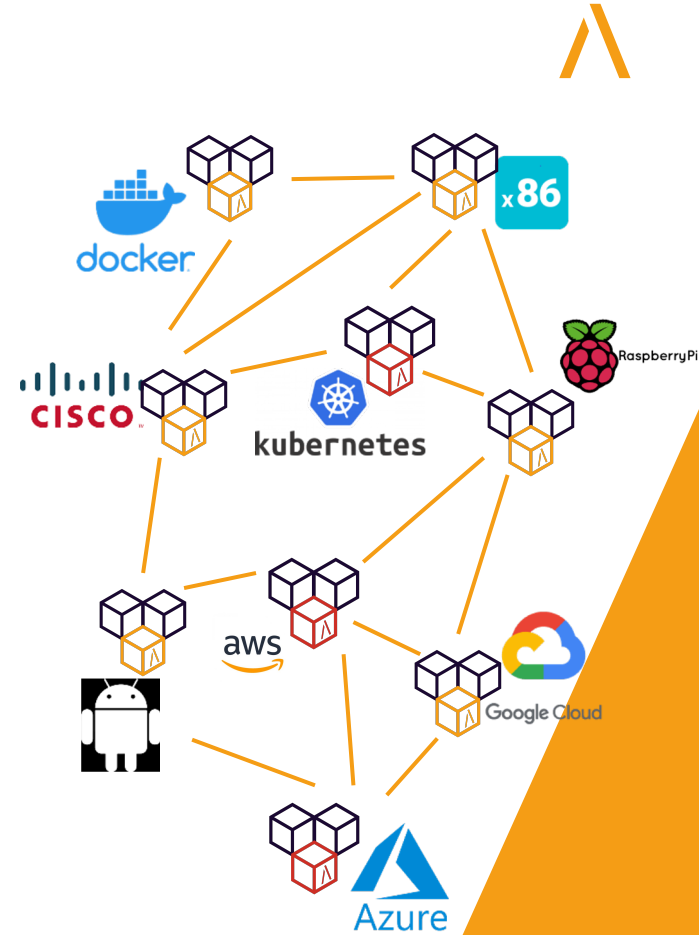

## Small footprint

- < 0.05 CPU for 24/7 continuous SLA monitoring
- < 1 CPU for up to 10Gbps TCP testing
- < 250MB RAM, < 200MB disk

## Agents are single-purpose

- actuate – layer-3 UDP, ICMP monitoring
- throughput – TCP and UDP performance
- trace – layer-3 hop testing
- transfer – http/ftp/port service and download speed testing
- domain – DNS lookup validation
- sdk – roll your own!

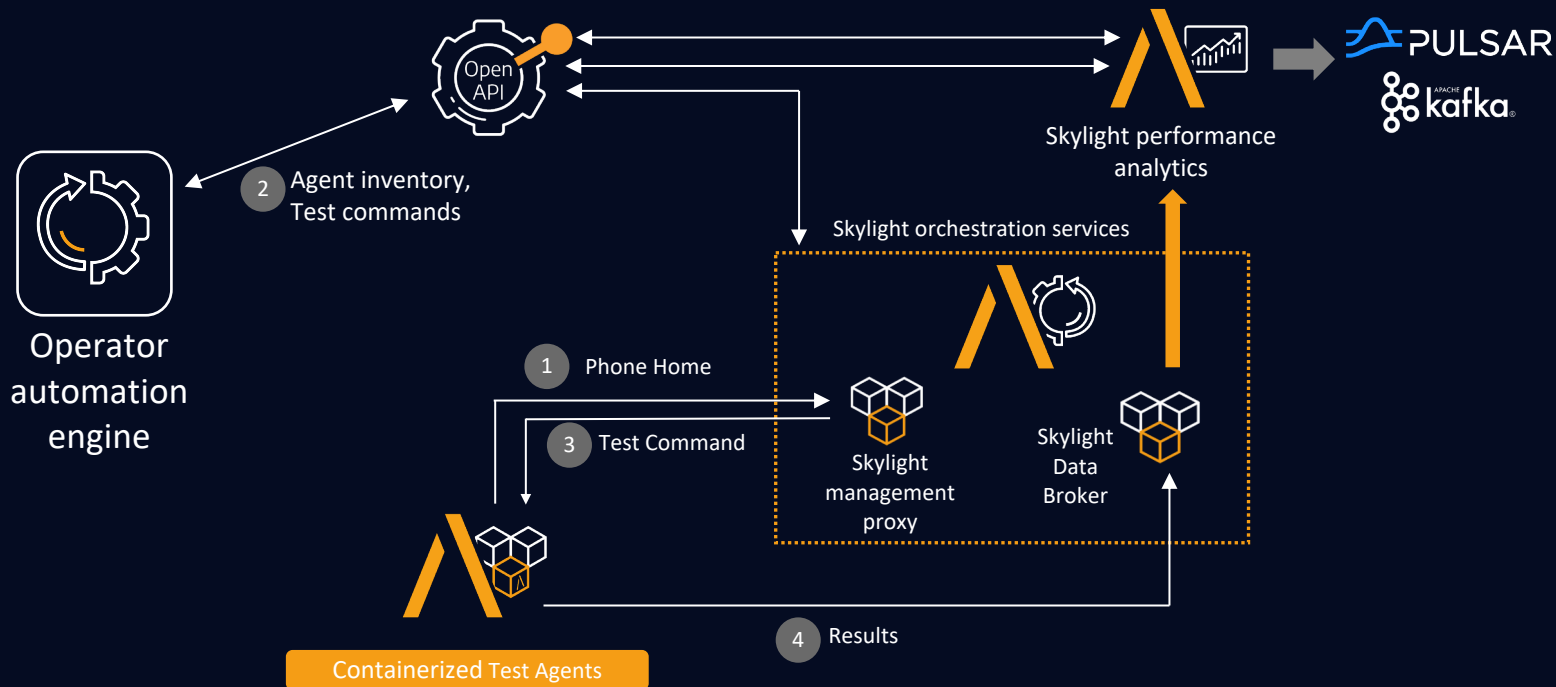

## Agents are stateless – deploy-destroy

A lighthouse with a white and dark blue striped tower stands on a rocky shore at night. A bright beam of light emanates from the top of the lighthouse, shining across the dark sky. The sea is dark with white foam from waves crashing against the rocks in the foreground.

# Skylight automation & Cisco integration

# Lifecycle and control loop of Skylight tests

# SKYLIGHT Deploy Skylight agent

- `docker pull gcr.io/sky-agents/skylight-agent-actuate-docker:r22.04`  
Freely available on Google Cloud Repository
- Started up using k8s helm charts or plain docker-compose yaml

```
services:
  demo-agent-service:
    container_name: demo-agent
    image: skylight-agent-transfer-amd64:latest
    hostname: demo-agent
    environment:
      AGENT_ID: "5ab8978e-8d32-4a41-914f-e73322d3dd8d"
      AGENT_MANAGEMENT_PROXY: "agent-rr.mycompany.net"
    volumes:
      - /home/demo/secret.yaml:/run/secrets/secrets.yaml
version: '3'
```

← name

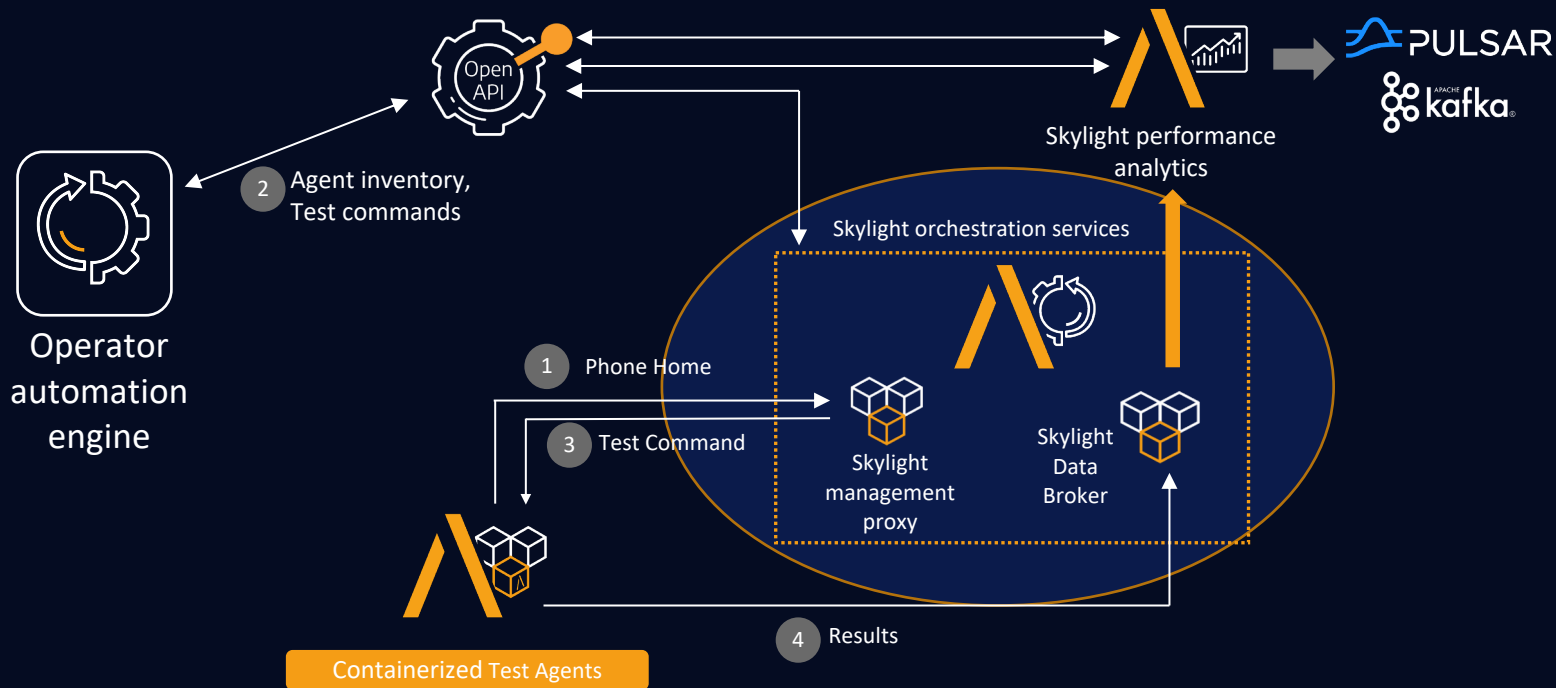

← ID

← registration point

- Soon via XR app manager:  
`Router#appmgr package install rpm accedian_actuate-22.04-XR_7.3.1.x86_64.rpm`

Agent will initialize and be ready for performing tests within seconds

# Lifecycle and control loop of Skylight tests

# SKYLIGHT Add tests / sessions

- /api/orchestrate/v3/agents/session

Adds a new test or session definition to an agent. A bulk command with a list also exists

- Example adding a new throughput test definition to an agent

```
"data": {  
  "type": "agentSessions",  
  "attributes": {  
    "agentId": " 13370a03-7213-4473-80bc-5e1ace2d25f4",  
    "session": {  
      "sessionName": "1G BS12 myRFC6349, to Montreal",  
      "sessionId": "f422344c-1bd7-4bd4-8073-773fc592e9e2",  
      "sessionType": "throughput",  
      "period": "once",  
      "throughput": {  
        "testServerAddress": "31.22.211.31",  
        "testServerPort": 5201,  
        "testReverse": false,  
        "testDurationSecs": 60,  
        "testReportIntervalSecs": 1,  
        "testParallel": 8,  
        "testDscp": 0,  
        "networkMaxRateBitsPerSec": 1000000000,  
      }  
    }  
  }  
}
```

which agentId to configure

name of the test path

test parameters

# SKYLIGHT Execute / start and stop tests

- `/api/orchestrate/v3/agents/{agentId}/command`  
Sends a command to an agent
- Example starting a throughput test in throughput mode

```
{
  "data": {
    "type": "agentCommands",
    "attributes": {
      "command": "start",
      "args": [
        {
          "type": "throughput",
          "sessionId": "f422344c-1b97-4bd4-8073-773fc592e9e2"
        }
      ]
    }
  }
}
```

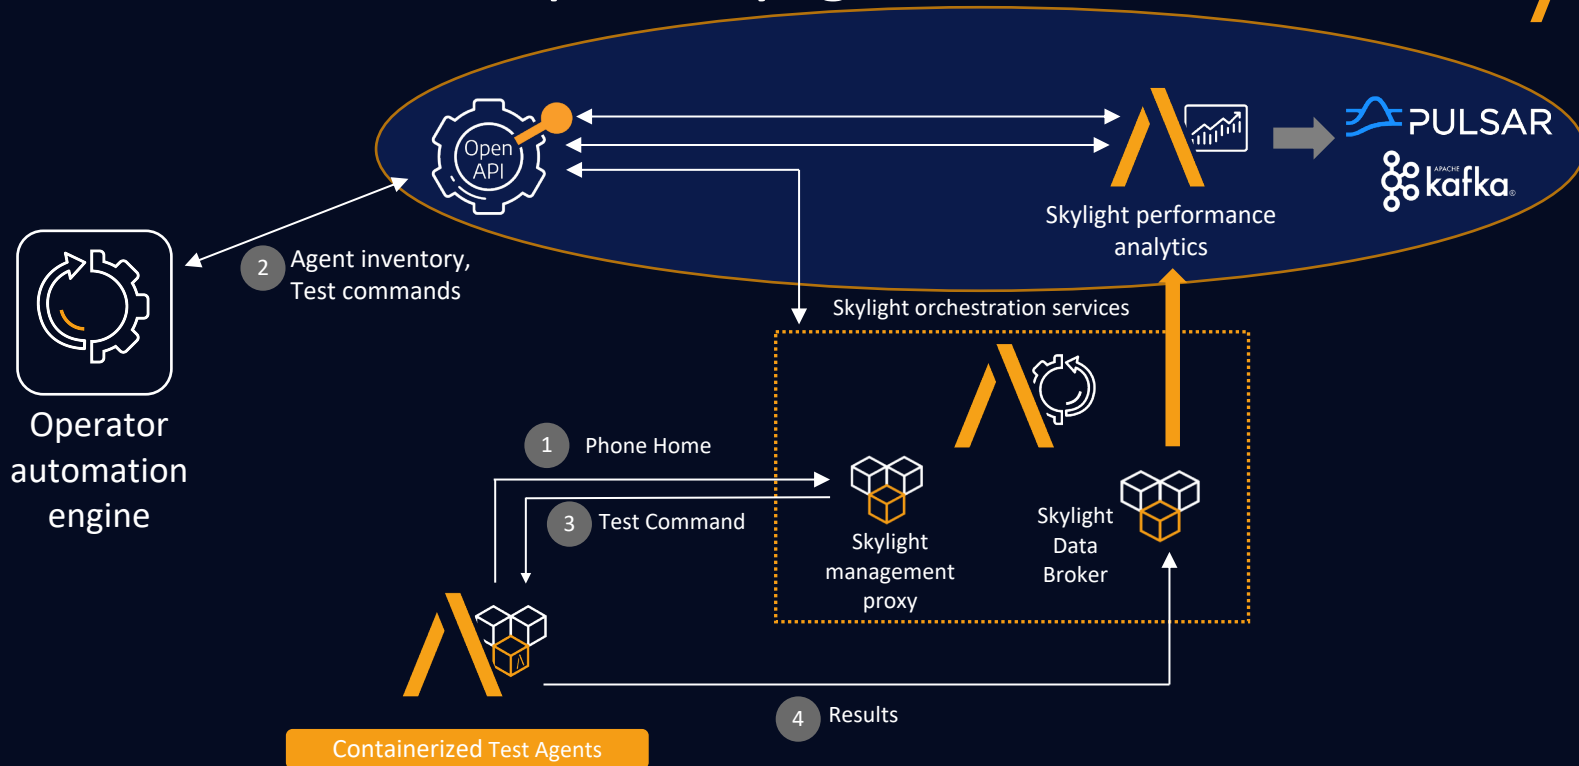

command

run a baseline test

test ID

The test will execute using the configured throughput parameters plus the parameters fetched from the baseline test as shown in the previous step

# Lifecycle and control loop of Skylight tests

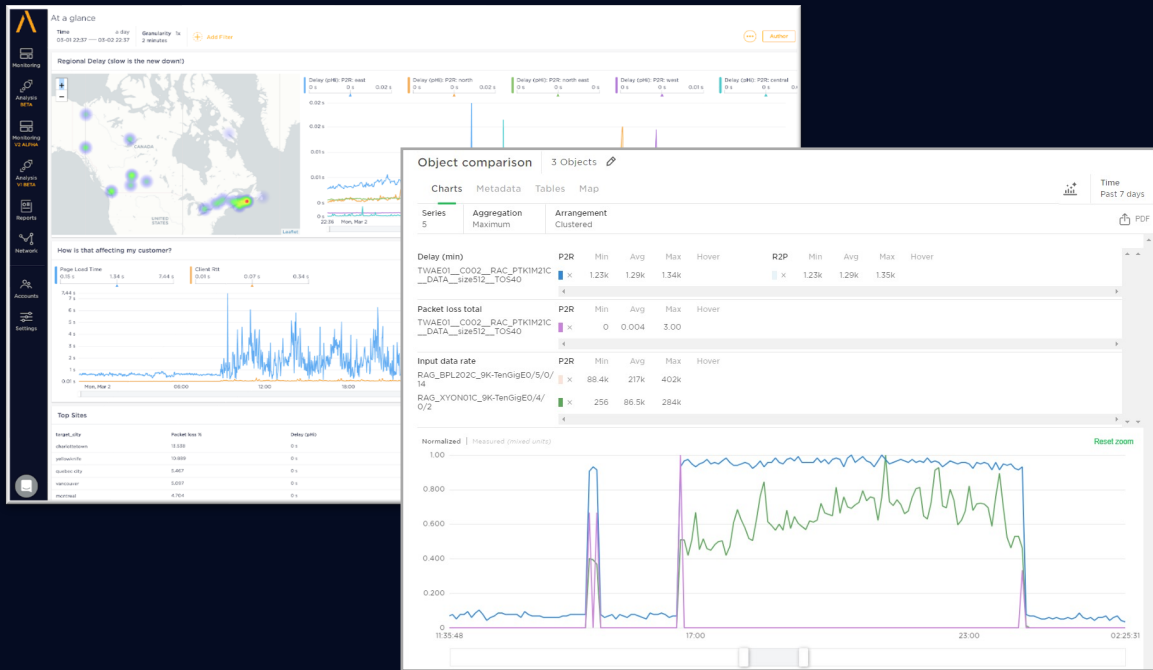

# Skylight Analytics

Cloud native engine for real-time metrics analysis, correlation, alerting and mediation

Ingestion of sensor and 3rd party metrics with data cleaning and normalization

Aggregation and alerting

Streaming support

Dashboards, drill-downs and correlation

Fully API-driven

ACCEDIAN

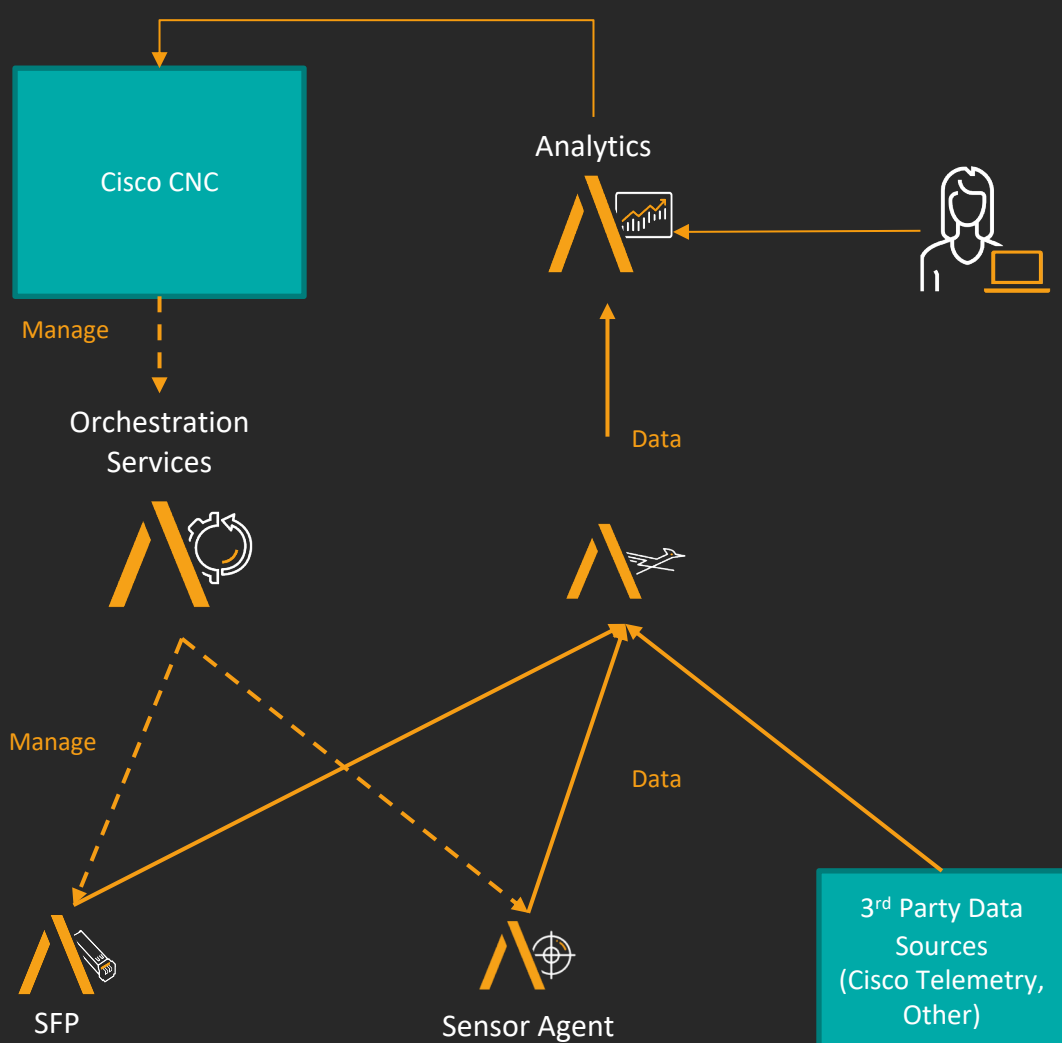

# Skylight & Crosswork Network Controller

---

# Big Picture: Skylight Performance Visibility

- Configure Skylight sensors for testing L2-L7
- Skylight Analytics provides data cleaning, normalization, aggregation and thresholding
- Collect Skylight sensor data, alerts, etc. back into CNC
- Add other data sources (Cisco telemetry, IPSLA, etc.) to get a more complete picture of service performance

# Skylight Northbound: Integration for Cisco NSO

- YANG models and RESTConf interfaces to support the following call flows
- Test Provisioning
  - NSO can provision tests with Sensor Control (VNF and PNF)
  - NSO can provision tests with Sensor Agents (CNF)
- Two test types supported currently – RFC5357 TWAMP and RFC6349 TCP throughput
- Metadata and Alert Provisioning
  - NSO can add metadata to PM sessions
  - NSO can configure alerts
- Alerting
  - Skylight can send alerts back to NSO

```
module accedian-twamp {
  yang-version 1.1;
  namespace urn:accedian:params:xml:ns:yang:accedian-twamp;
  prefix accedian-twamp;

  import ietf-inet-types {
    prefix inet;
  }

  organization
```

# Visibility and Guarantee Customer Experience

Use case example –

Reduce MTTI/MTTK leveraging Data Analytics powered by machine learning
