

NSO Update

Nils Petter Tisell
NSO Product Manager

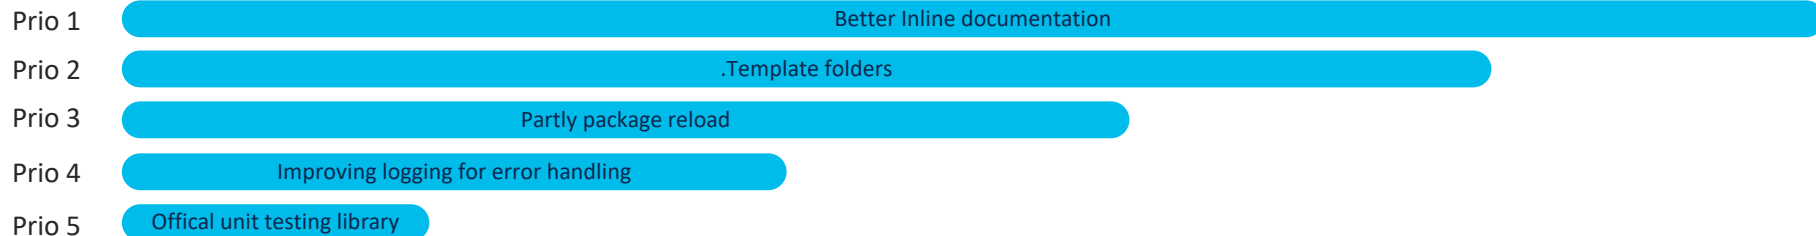

*Amidst the wires and the cables so long,
Lies a world where connections belong.
A network that hums with every beat,
Of the data that pulses through each fleet.*

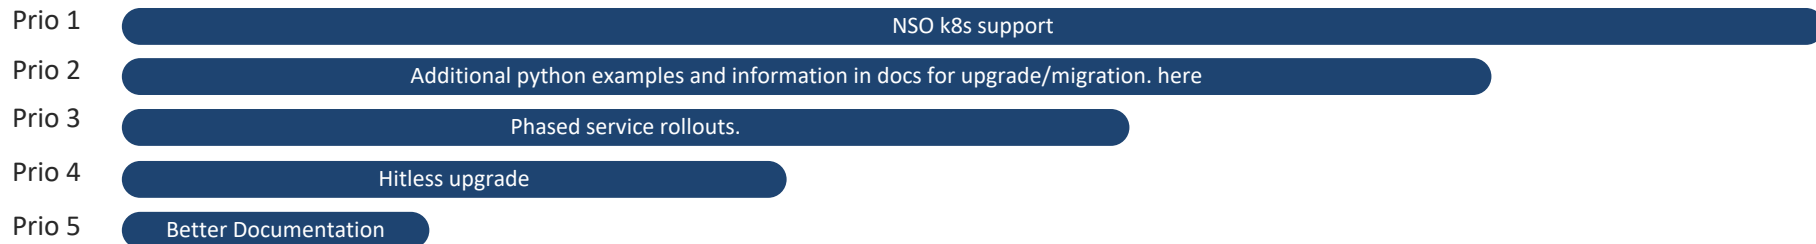

*But who orchestrates this dance so fine,
it all in perfect line?
It's Cisco NSO, the mighty king,
Of network services that we bring..*

NSO-5.8

The compiler will return an error when a tailf:link's target is under a tailf:mount-point or yangmnt:mount-point. For example, when a tailf:link target /device/device/config, /device/device/live-status, there would be an error at run-time. The issue will now be caught by yangmer at compile time.

[ENG-27571/yanger non-backwards compatible correction]
