Call Center Director Product Suite

Today's Call Centers have a vital task of managing the company's interface to their customers. Call Centers need to be effective and efficient yet maintain a high level of customer service. Managing the influx in volume that a Call Center can see from hour to hour or day to day and week to week can be challenging. Knowledge of the "statistics" to your supervisors and agents allows them to make more intelligent decisions.

Call Center Director Product Suite gives your Call Center the tools it needs. Our Agent & Queue Status XML Applications allow your agent at a glance to be able to monitor who else is available and how many calls and the oldest call in queue. Status Monitor application allows you to publish critical information to either a supervisor's monitor or a wallboard in order to keep your agents' informed.

Agent Status

Agent Status is a flexible XML application that allows your call center agents to view their status or the status of other agents directly on their IP Phone.

On the Agent's personal IP Phone display, the first row will show their current status. All the selected agents' status will scroll below the Agent's personal status. States shown are "LoggedOut", "NotReady" "Ready", "Reserved" "Work" and "Talking".

Queue Status

Queue Status is a flexible XML application that allows your Call Center agents to view the status of any selected configured queues on their IP Phone.

Status Monitor

Status Monitor is an exciting new application for creating wallboards or supervisor monitoring stations at competitive prices. This software allows you to completely customize your layout based on real time Call Center data. Status Monitor displays the data on a desktop monitor or flat panel monitor (i.e., plasma, TFT, LCD) using a Web-based application. Today's Contact Center agents and managers need to be able to view the statistics in unique ways in order to make intelligent decisions to best serve their customers and work environment. Status Monitor enables your Call Center team to be proactive in managing customers' demands and agent availability.

Status Monitor

Status Monitor web tool allows administrators to create a custom wallboard application for different devices, up to the number of license purchased. Each device can have multiple sub-panels within the main board.

This is an example of setting up a dynamic content on Queue Status Detail. Each sub-panel can be individually sized and colored.

Once you choose your size and colors, you then can choose which fields are displayed and the length of each field. After setting up the dynamic content you then can setup thresholds that will change color of the field when certain criteria have been met.

For more information on Call Center Director Product Suite please call us today at 513-645-4220 or email us at Sales@BCbD.biz. You may also visit us on the web at www.BCbD.biz.
