

Overview

This document will assist customers with the generation and use of Smart Licenses within their Enterprise License Agreement. With Smart Licensing, product instances or devices that are configured to call home to a Virtual Account will automatically consume the license quantities deposited within that Virtual Account.

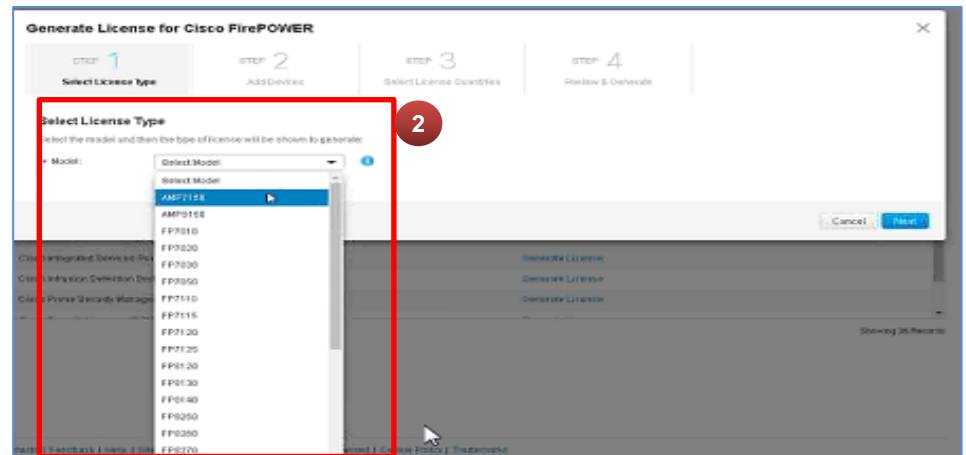

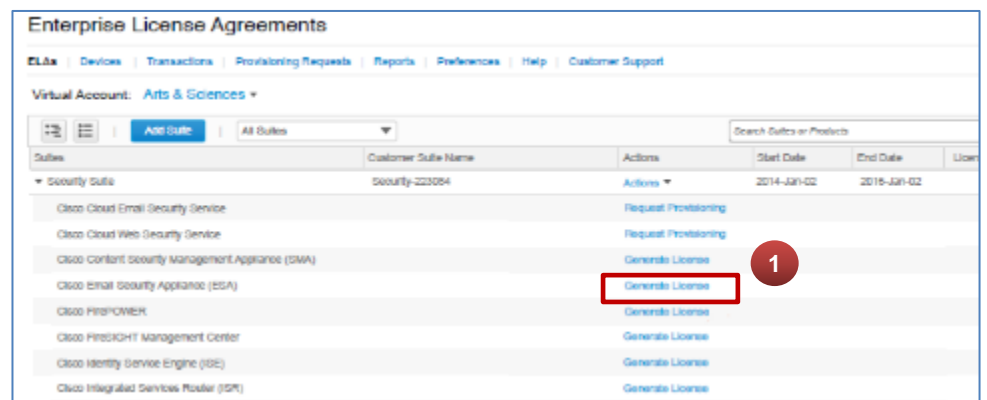

Customers will generate licenses quantities from the ELA Licensing Workspace and can configure their product instances within Cisco Smart Software Manager (Cisco SSM) to call home to a Virtual Account. Customers can also transfer license quantities between other Virtual Accounts, and can view consumption and usage of their Smart Licenses in Cisco SSM.

Part 1 – Generate Smart Licenses Quantities in the ELA Licensing Workspace

Generating a License

1 To begin, click on the **Generate License** icon in the current wizard as is.

2 In some cases, your offering might have multiple models to choose from. Select the model you desire. If your chosen license does not have multiple models, proceed to steps 3 and 4.

Traditional & Smart License

3 If you selected a product that is enabled for both traditional and smart license you will see this screen with the two radio buttons for **Traditional License** and **Smart License**. To generate a Smart License, select the **Smart License** radio button and select the target Virtual Account for the Smart License.

Note: Certain models might pre-select either Traditional License or Smart License and the user will not be able to select the alternative option.

4 If you selected a Smart Only Product, you will see this screen and can then select the target Virtual Account for the Smart License.

Note: As Smart Licenses can only be consumed from one Virtual Account, you will have the option of sending your license quantities to another Virtual Account. By default, the Virtual Account selected will be the one you are currently in

Generate License for Cisco FirePOWER

STEP 1 Select License Type | STEP 2 Add Devices | STEP 3 Select License Quantities | STEP 4 Review & Generate

Select License Type

Select the model and then the type of license will be shown to generate:

Model: FP-4110

Traditional License

License Quantities

5 The available features with their mapped SKUs will be listed for you to select. The user must enter a quantity other than 0.

6 When the "Smart License" option is selected, the visible wizard steps will remain the same but the "Add Devices" step will be skipped. This is because with Smart Licenses, a device should already be setup to call home to the appropriate virtual account.

Further instructions are provided below on how to setup a product instance or device with a Virtual Account.

Generate License for Cisco FirePOWER

STEP 1 ✓ Select License Type | STEP 2 → Add Devices | STEP 3 Select License Quantities | STEP 4 Review & Generate

Select License Quantities

Enter license quantities of the product features for the Smart License:

Part 2 – Manage License Quantities in Cisco SSM

After successfully generating a Smart License from the ELA Licensing Workspace, you may manage the product instances or devices that you would like to consume the license quantities generated in Cisco SSM. You may further transfer the generated license quantities to other Virtual Accounts and view the consumption and usage of your licenses.

Accessing Cisco SSM

- 1 To access Cisco SSM, go to <https://software.cisco.com> and click on Smart Software Licensing

Configuring a Product Instance to a Virtual Account

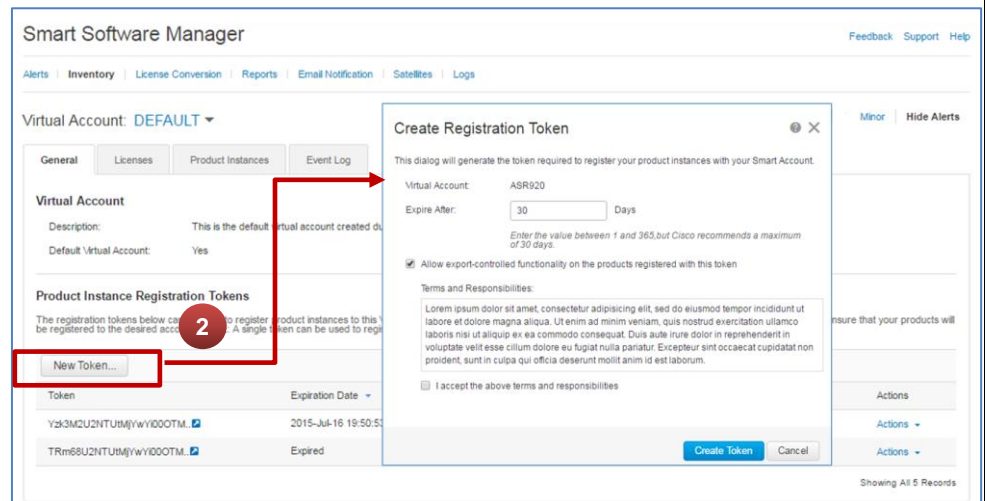

Product instance registration tokens can be used to register product instances to a Virtual Account. These tokens uniquely and securely identify the correct Smart Account and Virtual Account to ensure that products will be registered to the desired account.

If you do not have a product instance or device configured to call home to a Virtual Account, you may take the following steps to do so.

- 2 Current Registered Tokens can be found in the **Inventory** section under the **General** Tab. To create a New Token simply select the **New Token** button.

NOTE: A single token can be used to register multiple product instances.

- 3 You will have to configure your device to your specifications. One of the commands will include entering the token to register your device so that it can communicate to the Smart Software Manager. Listed is an example of a Smart Call Home configuration

```

call-home contact-email-addr sch-smart-licensing@cisco.com profile "CiscoTAC-1"
active
destination transport-method http
no destination transport-method email
destination address http
https://tools.cisco.com/its/service/oddce/services/DDCEService
no destination address http
https://tools.cisco.com/its/service/oddce/services/DDCEService
    
```

Simplifying the Cisco Software Experience

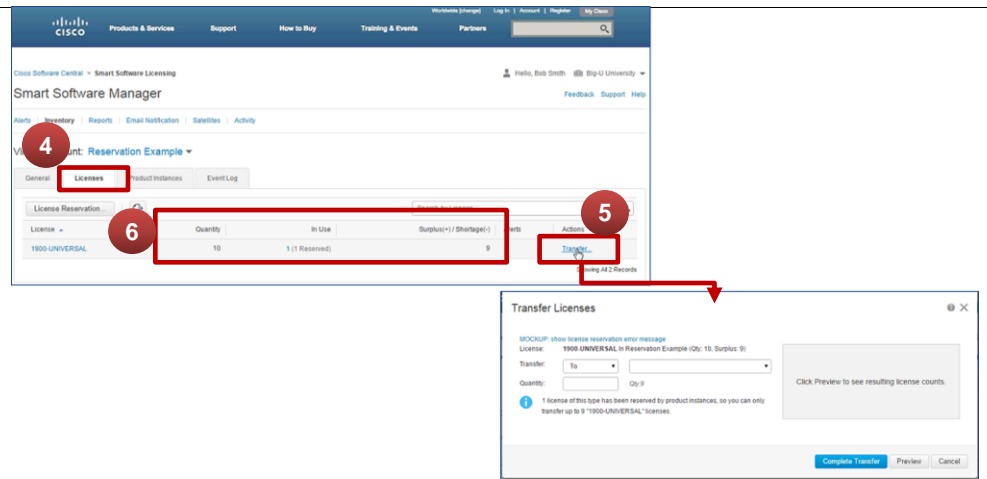

Fulfilling Smart License Entitlements from the ELA Licensing Workspace

- 4 Open a terminal window for the device and paste these commands in the Smart Software Licensing Configuration commands. Here is an example configuration.

```
a. (config)license smart enable
b. (exec)license smart register idtoken
NzKxOGQzZDEY2E3NS00MzJhLWE1NmEiMDhjMmVjM2YyYWU4LTeZODI4OTYw%0AOTcwMTh8WmtXWnh2TXkwUUp
6RTdsZiTNII5SUV6Y3loYXo5R3RqbE1pYnpM%0AMV12TTO%3D%0A
c. (config)license boot level premium
```

View Licenses

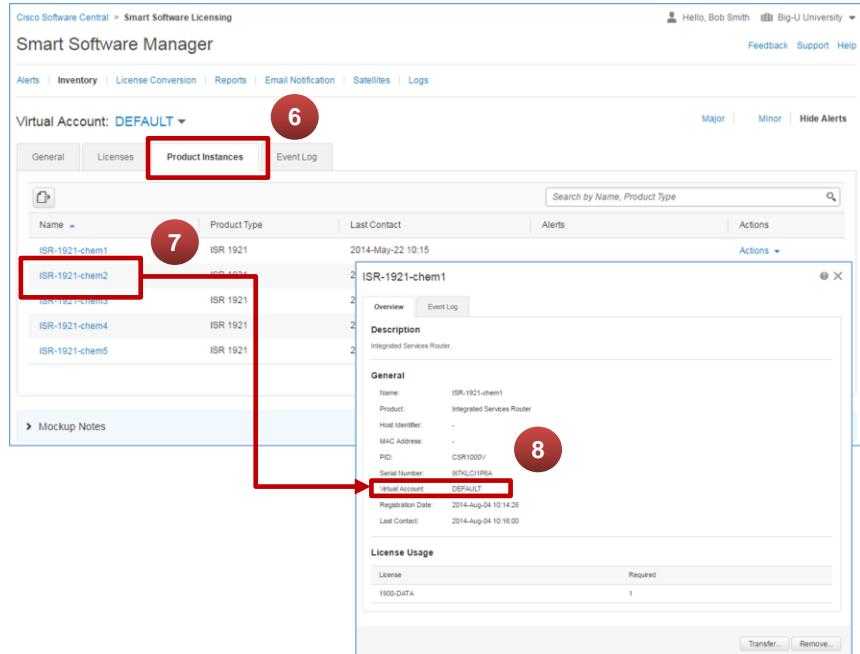

- 4 The **License** tab within the **Inventory** section will allow you to view all the licenses currently associated with your account.
- 5 Using the **Transfer** button you will be able to transfer the license to another virtual account.
- 6 You may also view the license quantities available, how many are in use, and how much shortage you might have.

Managing Product Instances

To verify your device is linked to the correct virtual account:

- 6 Click on the **Product Instances** Tab.
- 7 Select the correct **Product** from the list.
- 8 Verify the linked Virtual Account from the Pop Up Window.

Simplifying the Cisco Software Experience

Fulfilling Smart License Entitlements from the ELA Licensing Workspace

9 You may also transfer a product instance to another Virtual Account by clicking **Actions** and **Transfer** next to the Product Instance you would like to move, and select the new target Virtual Account for your product instance.

10 Similarly, you may remove the product instance from your Virtual Account by clicking **Remove**. If a Product Instance is removed, it will have to be re-registered if it is to consume any licenses.

The screenshot shows the Cisco Smart Software Manager interface. A modal dialog titled "Transfer Product Instance" is open, showing the name "brlb-cmts-07 (CBR8)" and a "Transfer To" dropdown menu. Below the dialog, a table lists product instances. A red box highlights the "Transfer..." and "Remove..." options in the "Actions" column of the table. Red circles with numbers 9 and 10 point to these options.

Name	Product Type	Last Contact	Alerts	Actions
