## 1. Purpose of document

The purpose of this document is to go through the different stages to configure manually CISCO CCM and QuesCom gateway interconnection through SIP or H.323 Trunk.

Note that this document shows in details the setup parameters, which are by default automatically configured by QuesCom Gateway wizard.

## 2. Overview

## 3. H.323 Trunk

### 3.1. Cisco CCM Trunk configuration

Select a Trunk type Inter-cluster Trunk (Non-Gatekeeper-Controlled)

The screenshot displays the Cisco Unified CM Administration web interface for configuring a Trunk. The page title is "Trunk Configuration" and the status is "Ready".

**Device Information**

Product:	Inter-Cluster Trunk (Non-Gatekeeper Controlled)
Device Protocol:	Inter-Cluster Trunk
Device Name*	Mobily_H323
Description	
Device Pool*	Default
Common Device Configuration	< None >
Call Classification*	Use System Default
Media Resource Group List	< None >
Location*	Hub_None
AAR Group	< None >
Tunneled Protocol*	None
Packet Capture Mode*	None
Packet Capture Duration	0

Media Termination Point Required  
 Retry Video Call as Audio  
 Path Replacement Support  
 Transmit UTF-8 for Calling Party Name  
 Unattended Port  
 SRTP Allowed - When this flag is checked, IPsec needs to be configured in the network to provide end to end security. Failure to do so will expose keys and other information.  
Use Trusted Relay Point\* Default

**Incoming Calling Party Settings**

If the administrator sets the prefix to Default this indicates call processing will use prefix at the next level setting (DevicePool/Service Parameter). Otherwise, the value configured is used as the prefix unless the field is empty in which case there is no prefix assigned.

Incoming Calling Party National Number Prefix	Default
Incoming Calling Party International Number Prefix	Default
Incoming Calling Party Unknown Number Prefix	Default
Incoming Calling Party Subscriber Number Prefix	Default

**Multilevel Precedence and Preemption (MLPP) Information**

MLPP Domain	< None >

## 3.2. QuesCom Gateway configuration

In this example we will use a QuesCom gateway based on v6.20. Please note that presentation differs from the next example of SIP trunk configuration which is based on QuesCom v5.20.

Create H323 trunk

The screenshot shows the QuesCom web interface for configuring a Foreign Gatekeeper. The interface includes a sidebar with navigation options such as Users & Mobility, Objects, and Services. The main content area displays the 'Foreign Gatekeeper' configuration form. The form is divided into several sections:

- Settings:** ID (CCMH323), Gatekeeper Type (H323 selected), Name (CCMH323), IP Address (192.168.195.218), Host name, Listen Port (1720), No Resp. delay (ms) (0), Default SmartAD (Q401-CS-00020313), and VoIP Profile (ND\_RAS\_H323).
- SIP registration and authentication:** Registration user name, Dialing domain, User name, Password, Localisation (International Prefix, Country Code, Area Code, National Prefix).
- Supported prefixes:** A table with columns for Prefix and Number, and a 'Prefix' checkbox.

At the bottom of the form, there are buttons for Add, Remove, Update, and Clear All. The bottom right corner of the form has a green 'SAVE' button and a red 'CANCEL' button.

# Enterprise One Number

Create a service from CCMH323 \* to GSM Pool

The screenshot shows the 'Service' configuration page in QuesCom. The 'Service enabled' checkbox is checked. Under 'Origin', 'Origin Type' is set to 'Foreign GK', 'Origin' is 'CCM323', 'Called Prefix Number' is '\*', 'Call Type' is 'Foreign Gatekeeper', and 'Enabled for' includes H323, QGP, and SIP. 'Service associated' is set to 'GSM'. 'Call Server Operations' shows LCR Support as 'None', CDR Support as 'Yes', and Cost Support as 'No'. 'VoIP Service' has 'Law Transcoding' checked and 'Quality of service(HEX)' set to 'Min Delay'. 'Switch service' is set to 'GSM' with 'Slot Balancing' checked. 'Destination' is set to 'Device Group', 'IP Address' is empty, 'Device' is 'GSM\_PDDLSmartAD', and 'Called number lookup' is 'Local'. 'Backup Mode' has 'DSP', 'Relay', 'RSVP', and 'Other' checked. 'Fax / Voice Service' has 'Max Duration (s)' set to 120.

Add the following service to route incoming GSM calls to CCM

The screenshot shows the 'Service' configuration page in QuesCom. The 'Service enabled' checkbox is checked. Under 'Origin', 'Origin Type' is 'Device', 'Origin' is '0401-C6-00020313SmartAD', 'Called Prefix Number' is '\*', 'Call Type' is 'GSM Incoming', and 'Enabled for' includes H323, QGP, and SIP. 'Service associated' is set to 'VoIP'. 'Call Server Operations' shows LCR Support as 'No', CDR Support as 'Yes', and Cost Support as 'No'. 'VoIP Service' has 'Law Transcoding' checked and 'Quality of service(HEX)' set to 'Min Delay'. 'Switch service' is set to 'GSM' with 'Slot Balancing' checked. 'Destination' is set to 'Foreign GK', 'IP Address' is empty, 'Device' is 'CCMH323', and 'Called number lookup' is 'Local'. 'Backup Mode' has 'DSP', 'Relay', 'RSVP', and 'Other' checked. 'Fax / Voice Service' has 'Max Duration (s)' set to 120.

## 4. SIP TRUNK

### 4.1. Cisco CCM Trunk configuration

#### Define SIP Trunk

## Define adequate Route pattern

## 4.2. QuesCom Gateway configuration

This example is based on QuesCom gateway v6.20. Please note that presentation differs from the previous example of H.323 trunk configuration which is based on QuesCom v6.20 is used.

### Define SIP Trunk with CCM

## Create a service from CCMH323 \* to GSM Pool

The screenshot displays the QuesCom web interface for configuring a service. The interface includes a navigation menu on the left, a top navigation bar with 'HOME', 'FILTERS', 'LOGOUT', 'SAVE', 'RESET', and 'CANCEL' buttons, and a main configuration area. The configuration area is divided into several sections:

- Service:** Service enabled
- Origin:** Origin Type:  Device  Foreign GK  CTI   
Origin: Device Group: **ccm**  
Called Prefix Number:   
Call Type: **Foreign Gatekeeper**  
Enabled for:  H323  QCP  SIP  
Fax detection:
- Destination:** Destination Type:  IP Address (H323)  Foreign GK  CTI  Device Group  
IP Address:   
Device: **GSM\_POOL (SmartIAD)**  
Balancing mode:  None  Bal.  Cycling  Sim  
Called number lookup:  Local  Nquire  External
- Service associated:** Service type: **GSM**  
Authentication Type: **None**  
Called Number Type: **Dialled Number**  
Voice Fax Mode:  Switch  VoIP  CTI Application
- Backup Mode:** Enabled for:  DSP  Relay  RSVP  Other
- Call Server Operations:** LCR Support: **None**  
CDR Support: **Yes**  
Cost Support: **No**
- Fax /Voice Service:** Voice Fax Type: **Store & Forward**  
Store & Forward Type: **FAX TO EMAIL**  
Called Number:   
Notify Receipt Type: **None**  
Notify receipt to:   
Send To:   
Acknowledge Type: **None**  
Acknowledge to:   
Max Duration (s): **0**  
Stop on DTMF: **No**
- VoIP Service:** Law Transcoding:   
Quality of service (HEX): **Min Delay** (10)
- Switch service:** Slot:  PRI  GSM  
 Any  Slot Balancing   
Port Number:  0  1  2  3  4  5  6  7  8  9  10  11  12  13  14  15  
 Any  Port Balancing
