

Release Notes for Cisco UCS Platform Emulator, Release 4.1(2cPE1)

First Published: 2020-06-15

Release Notes for Cisco UCS Platform Emulator

Cisco UCS Platform Emulator

Cisco UCS Platform Emulator is the Cisco UCS Manager application bundled into a virtual machine (VM). The VM includes software that emulates hardware communications for the Cisco Unified Computing System (Cisco UCS) hardware that is configured and managed by Cisco UCS Manager. For example, you can use Cisco UCS Platform Emulator to create and test a supported Cisco UCS configuration, or to duplicate an existing Cisco UCS environment for troubleshooting or development purposes.

About This Document

This document describes system requirements, new features, images information, known caveats and workarounds for Cisco UCS Platform Emulator, Release 4.1(2cPE1). This document also includes current information that became available after the technical documentation was published.

Use this release notes as a supplement with the other documents listed in the documentation roadmap <http://www.cisco.com/go/unifiedcomputing/b-series-doc>

Make sure to review other available documentation on Cisco.com to obtain current information on Cisco UCS Platform Emulator.

Revision History

Release	Date	Description
4.1.2cPE1	June 15, 2020	Created release notes for Cisco UCS Platform Emulator Release 4.1(2cPE1).

Cisco UCS Platform Emulator Virtual Machine Packaging

Cisco UCS Platform Emulator is packaged as a compact virtual machine (VM) with the CentOS open source Linux distribution. This VM can run a Cisco UCS Manager multichassis, multiblade simulation on a laptop or desktop computer and does not require an Internet connection. Cisco UCS Platform Emulator is delivered as a zip file and as an .ova file. The zip file includes the .vmx file. The filename of the zip file includes the

Cisco UCS Platform Emulator release number, such as Cisco_UCS_Platform_Emulator_4.1.2cPE1.zip. The file size is approximately 2 GB.

Virtual Machine Prerequisites

Before installing Cisco UCS Platform Emulator, install one of the following supported virtual machine (VM) hypervisors:

- VMware Player 4.0 and above for Microsoft Windows and Linux
- VMware Workstation 7 and above for Microsoft Windows and Linux
- VMware Fusion 4.0 and above for Mac OS X
- VMware vSphere ESXi 4.0 and above
- Microsoft Hyper-V Server
- Java Runtime Environment Version 1.7

New Hardware Features

The following item is the new hardware component:

- **Fabric Interconnect(4G-FI-HD)** - UCS-FI-64108

New Software Features

This section briefly describes the new features introduced in Cisco UCS Platform Emulator, Release 4.1(2cPE1). For detailed information about the features listed, see the documents listed in the [Related Documentation, on page 5](#) section.

Cisco UCS Platform Emulator, Release 4.1(2cPE1) includes the following new feature:

- UCSPE: OVA host OS upgraded to Cent OS 6.10(Final). (OVA template OS)

Connections to Intersight

Cisco UCS Platform Emulator does not support connection to Cisco Intersight management to avoid the use of Intersight resources by emulated devices. Intersight Device Connector has been disabled in the UCS Platform Emulator, and the device connector menu in the UI is non-functional. You can use Intersight demo environments in the Cisco demo Cloud: <https://dcloud.cisco.com/content/catalogue?search=intersight> and Cisco DevNet <https://developer.cisco.com/site/intersight/> to explore the Intersight management of UCS.

Security Fix

The following security issue was fixed in this release:

Release	Defect ID	CVE	Description
4.1(2cPE1)	CSCvq21997	None	UCSPE: [Vulnerability] Upgraded host OS in OVA to CentOS 6.10(Final).

Known Limitations

Cisco UCS Platform Emulator has the following limitations:

- **UCS C3260 connectivity**— Port channel connectivity of UCS C3260 system to fabric interconnect or fabric extender is not supported.
- **Import from a live UCS**— While importing a live UCS with UCS C3260 chassis, only one link is imported from a break out port connectivity.
- **Storage Profile**— Migration of virtual drives is not supported
- **Import from a live UCS**— While importing a Live UCS with UCS-FI-6332 or UCS-FI-6332-16UP fabric interconnect, connections to break out ports of the Fabric Interconnect are not imported.
- **Configuring break out ports**— Cisco UCS Platform Emulator does not support configuration of break out ports of UCS-FI-6332 and UCS-FI-6332-16UP Fabric interconnects.
- **Export XML**— On Google Chrome, the Export XML feature might create a blank dump due to rendering issues. Use another browser to collect the XML dump.
- **Download of stripped-down version of UCS Firmware**— Effective with UCS Platform Emulator, Release 2.2(1bPE1), only the stripped-down version of size less than 50 KB is available for download. The download of regular (non-stripped version) version is not supported anymore.
- **Firmware upgrades**—Upgrading firmware for devices manually or using service profiles or Auto-Install is a beta-feature and may display inconsistent behaviour.
- **Recommission and decommission**—Recommission and decommission of devices are not supported.
- **Domain Name Server (DNS) resolution**— DNS resolution is not available for Cisco UCS Platform Emulator. All domain names must be resolved manually using a static IP address.
- **Syslog**—Cisco UCS Platform Emulator and Cisco UCS Manager integrated with Cisco UCS Platform Emulator does not produce a syslog.
- **Data path**—Cisco UCS Platform Emulator does not emulate network data flow. The software emulates the functions that are necessary for the management plane.
- **Microsoft Internet Explorer**—Microsoft Internet Explorer does not support the Cisco UCS Platform Emulator Model Object Browser and Start-up Inventory features. To use these features, you must use a Mozilla-compatible browsers such as Mozilla Firefox or Google Chrome. Internet Explorer Version 8.0 and later supports other Cisco UCS Platform Emulator features.
- **Cut-through interfaces**—Cut-through interfaces to equipment such as IPMI and SNMP, are not supported. Servers in a Cisco UCS domain contain integrated management controllers (CIMCs), each of which supports an IPMI interface. The fabric interconnect components of Cisco UCS support an SNMP interface. However, because both fabric interconnects and CIMC are considered to be endpoints of the Cisco UCS

management system, these interfaces are cut-through interfaces that bypass Cisco UCS Manager, the central management system.

- **Serial over LAN, FTP, TFTP, Telnet**— Similarly to SNMP and IPMI interfaces, serial over LAN, TFTP, FTP, and Telnet access (through user-facing or management-plane-facing Ethernet interfaces) is not available because they bypass the management software and are considered cut-through access. SSH is supported only to the Cisco UCS Platform Emulator management IP through the config user for Cisco UCS Manager CLI access.
- **Keyboard/Video/Mouse (KVM)**— KVM is a cut-through interface. Cisco UCS Platform Emulator does not support KVM because there are no physical servers attached to the emulation system to which KVM could connect. Launching the KVM console does not display an error message.
- **Emulation of high-availability failover**— No failover scenario is supported. If one management process dies, the other does not take over.
- **AA-based authentication (LDAP, RADIUS, TACACs)**— In emulation mode, Cisco UCS Manager accepts security configuration changes, but does not enforce local or remote password authentication. Any username and password combination can successfully log in to the Cisco UCS Manager GUI with administrator privileges. If a local user is created with a role and locale, Cisco UCS Platform Emulator enforces role, privilege, and locale definitions for the user logging in, allowing an end user to test how roles, privileges, and locales function in Cisco UCS Manager.
- **Remote monitoring (SNMP, Syslog, Call Home, Smart Call Home)**— Cisco UCS Platform Emulator does not support remote monitoring of Cisco UCS Manager on any interface except the Cisco UCS Manager XML API. You can configure SNMP (traps or gets), local or remote syslog, Call Home, and Smart Call Home remote monitoring in Cisco UCS Platform Emulator but you cannot send or query data through those interfaces.
- **Cisco UCS Manager database backup and restore**— Cisco UCS Platform Emulator does not support full- state back up or restore configurations from within Cisco UCS Manager. If a user imports a system backup which consists of switch configurations such as VLAN, CallHome, and so on, the import operation fails.
- **Capability catalog**— Cisco UCS Platform Emulator does not support updating the capability catalog in Cisco UCS Manager. Cisco UCS Platform Emulator supports only the original capability catalog.

Open Caveats

This section lists the open caveats.

Bug ID	Symptom	Workaround
CSCvb43848	Occasionally, disks and DIMMs of chassis and racks are not imported.	Add the components manually.
CSCva87412	Association of a service profile to UCSC-C3K-M4SRB/UCSC-C3X60-SVRNB fails with an error message: Another UCSM operation on the adapter 0/0/0 is in progress.	Reinsert the server.

CSCuy38172	Firmware for server BIOS and CIMC may fail to upgrade.	None.
CSCva35700	Fans are not displayed in the Cisco UCS Manager for rack servers and modular servers.	None.
CSCuy69146	While configuring the second level boot order, an error message - <code>version not supported</code> , is displayed.	None.
CSCuy69171	While configuring the virtual media for a server, an error message - <code>version not supported</code> , is displayed.	None.
CSCuy89163	While UCSB-EX-M4-1/2 servers are being discovered, an error message - <code>slot resolution</code> , is occasionally displayed.	Remove the chassis and reinsert in Cisco UCS Platform Emulator.
CSCuz17266	Fans of the fabric interconnects on the fabric interconnect focus page do not match the configuration from a Live UCS.	None.

Related Documentation

System Requirements

The management client must meet or exceed the following minimum system requirements:

- HTML 5 supported web browsers:
 - Microsoft Internet Explorer 11 or higher
 - Mozilla Firefox 45 or higher
 - Google Chrome 57 or higher
 - Apple Safari version 9 or higher
 - Opera version 35 or higher
- Microsoft Windows 7, Apple Mac OS X v10.6, Red Hat Enterprise Linux 5.0 or higher operating systems.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, see What's New in Cisco Product Documentation at: <http://www.cisco.com/c/en/us/td/docs/general/whatsnew/whatsnew.html>

Subscribe to *What's New in Cisco Product Documentation*, which lists all new and revised Cisco technical documentation, as an RSS feed and deliver content directly to your desktop using a reader application. The RSS feeds are a free service.

This document is to be used in conjunction with the documents listed in the "Related Documentation" section.
