SIP Trunking designs vary widely depending on several IT and business factors.

Join us as we cover several important technical design considerations that can make your rollout easier, cost-effective, and more flexible over the long term.

This deep dive webinar, presented by SIP architects with hundreds of successful deployments to their credit, can help your IT team reduce risk while improving the speed, reliability, and flexibility of your SIP network.

This technical event will address:

- Realizing the benefits of SIP in a multi-vendor environment
- Keys to interoperability
- Understanding the three models of SIP Trunk Deployment
- Identifying your best available path
- SIP Trunking and branch architectures for maintaining future flexibility
- Lean design models for various branch location missions
