

# JABBER MRA DETAILED CALL FLOW

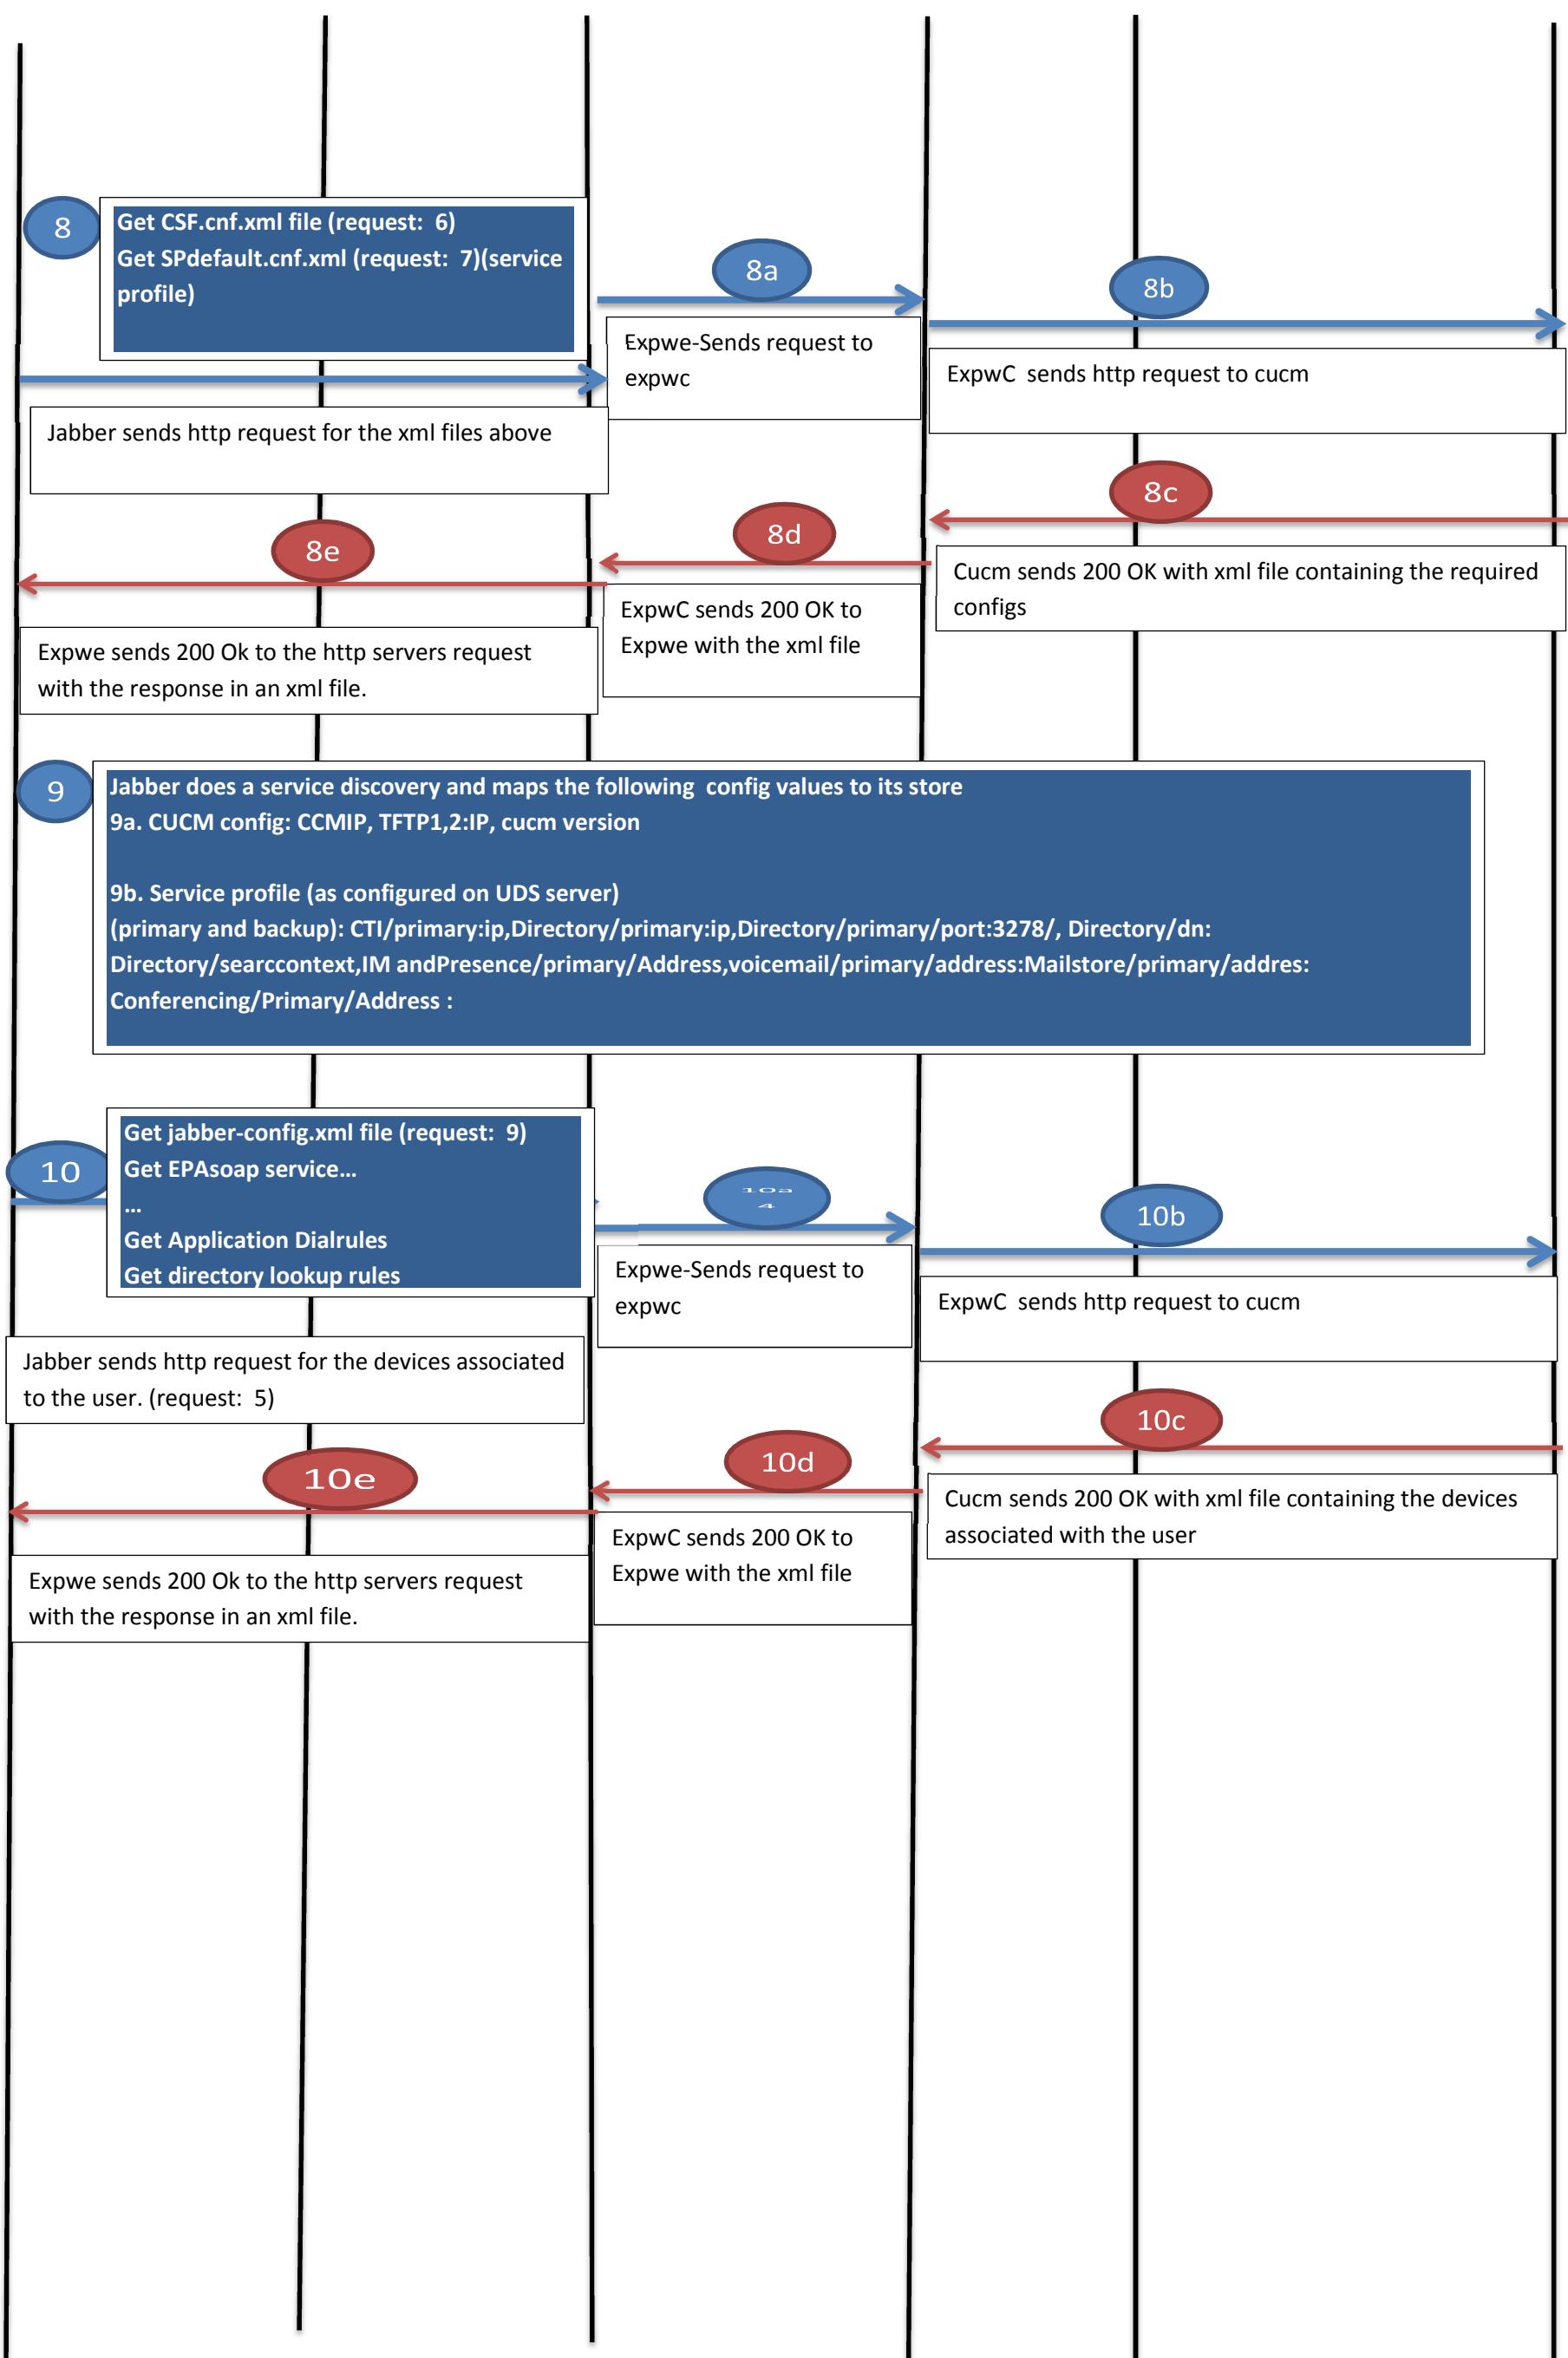

This document details the call flow involved with Jabber mobile remote access feature. It delves into the underlying elements of each phase of how jabber discovers services, interacts with expressway-e server, registers with CUCM etc. This document provides a great insight into deploying and troubleshooting the Jabber MRA

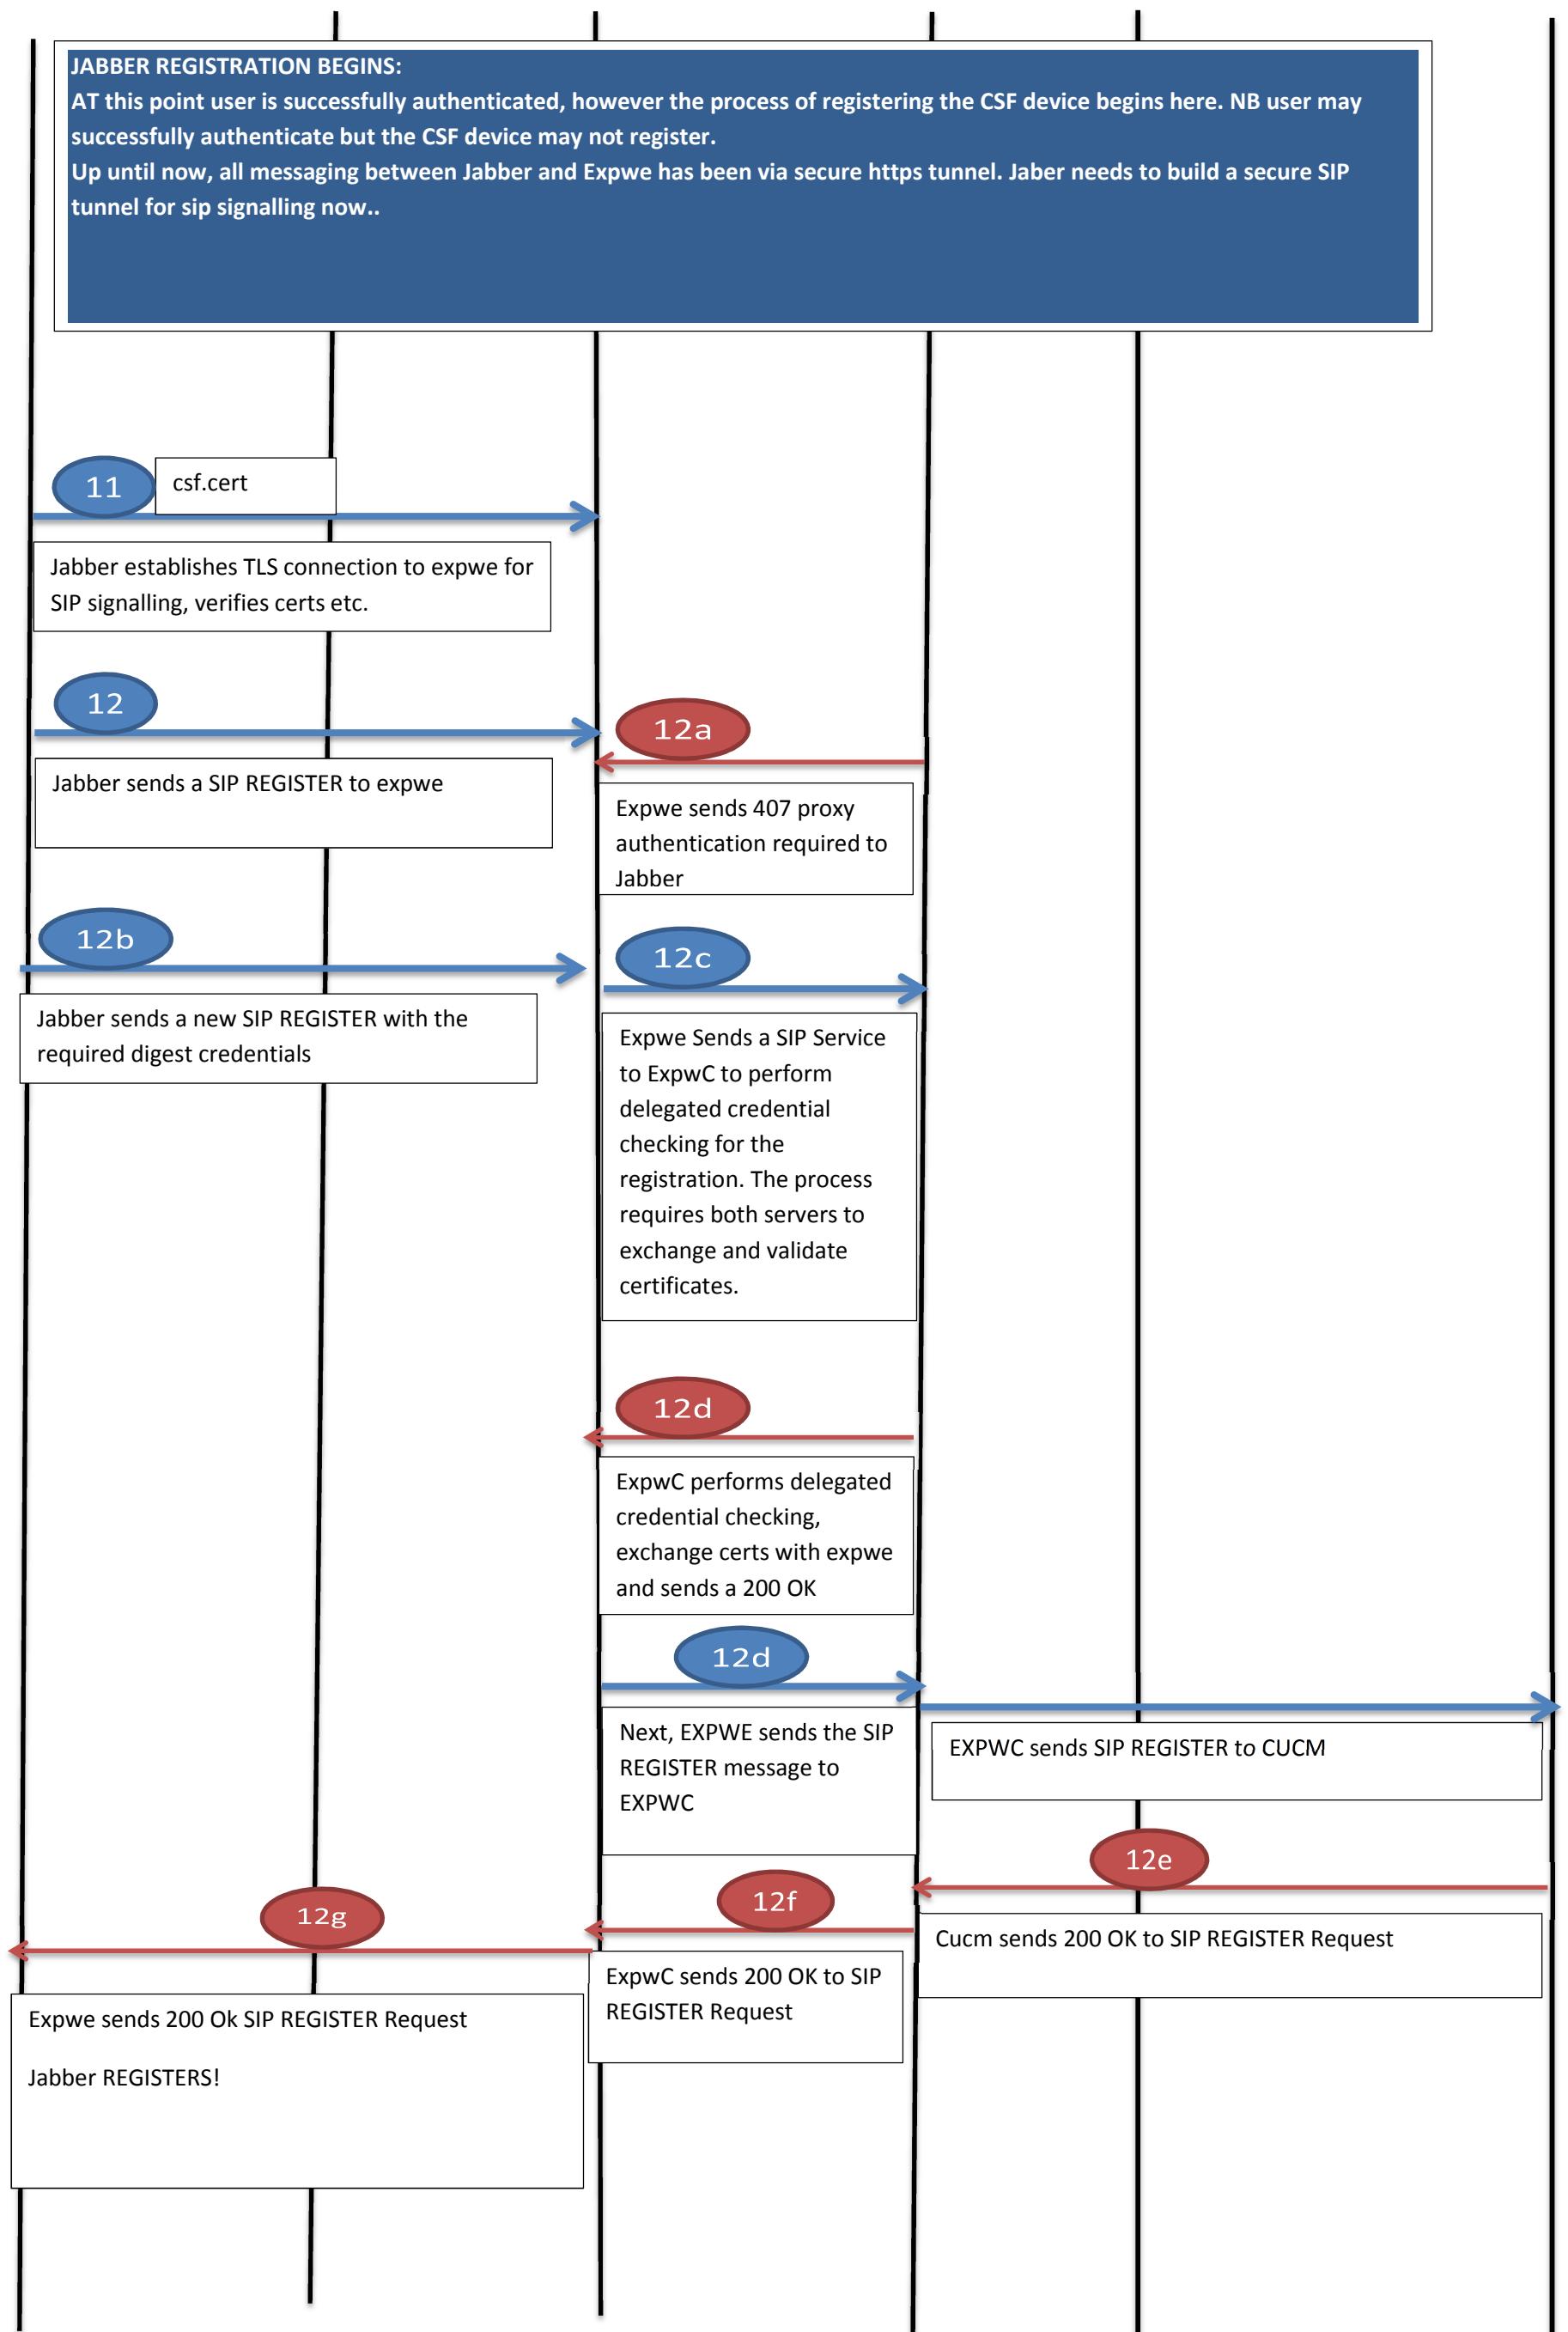

## Contents

|  |    |
|--|----|
| 1. DNS SRV Query.....  | 6  |
| 2. SECURE HTTP CONNECTION (TLS CONNECTION).....  | 6  |
| 3. Get_Edge_Config .....   | 6  |
| 3a. Expw-E sends HTTP get edge config to Expway-C.....   | 6  |
| 3d. Expw-C sends a HTTP 200 OK to expw-E and the resulting edge_server_config details in an XML format as shown below:.....                                | 7  |
| 3e. Expw-e sends HTTP 200 OK to jabber.....  | 7  |
| 4. Get UDS request/response .....  | 8  |
| 4a.EXPW-E receives request and sends it to EXPW-C02.....   | 9  |
| 4b.Expw-C02 sends the request to CUCM .....  | 9  |
| 4e. Next EXPW-E receives response from Expw-C02 and sends 200 OK with the xml config to Jabber.....  | 9  |
| 5. User Home cluster Discovery .....   | 10 |
| 5a. Expw-E receives a Get ClusterUser?username=user from Jabber.....   | 10 |
| 5b.Expw-E sends request to Expw-C and gets response back from Expw-C .....   | 10 |
| 6. Servers Query.....  | 11 |
| 6a.Expw-E receives http request from Jabber .....  | 11 |
| 6d.Expw-C sends 200 OK response from cucm to Expw-E.....   | 11 |
| 6e.Jabber gets a 2000 OK from Expw-E .....   | 11 |
| 7. Devices .....   | 11 |
| 7a. Expw-E sends https request to Expw-C, Expw-C c forwards to cucm, cucm sends 200 K with xml config and Expw-E sends 200 OK with xml config file....     | 12 |
| 7e. Jabber receives 200 OK to http request for devices.....  | 12 |
| 8. Get CSF XML configuration file .....  | 12 |
| 8. Service profile configuration.....  | 13 |
| 9. Jabber does a service discovery for the service profile and stores configuration its config store.....  | 14 |
| 10. Jabber-config.xml.....   | 14 |
| 10. Jabber requests application dial rules and gets response .....   | 14 |
| 10. Jabber requests application Directory Lookup rules and gets response .....   | 14 |
| 11. SIP TLS Connection for sip signalling.....   | 14 |
| 12. Device Registration .....  | 15 |
| 12a. Expw-E sends a 407 proxy authentication required .....  | 15 |
| 12d. After delegation credential checking is done and certificates verification is complete in the process Expw-E sends the Registration request to Expw-C | 17 |
| 12f. Expw-E gets a 200 Ok from EXPW-C .....  | 17 |

## 1. DNS SRV Query

Jabber sends SRV query to DNS server for the domain user attempts to login with eg [mac.donald@uclab.com](mailto:mac.donald@uclab.com)  
Excerpts from jabber logs are show below:

- a. [csf.dns] [dns::mapFromWindowsDNSResult] - \*----\* DNS query \_cisco-uds.\_tcp.uclab.com. has failed: DNS name does not exist.
- b. [csf.dns] [dns::DnsUtils::executeSRVRecordQuery] - About to make DNS SRV record query '\_cuplogin.\_tcp.uclab.com.'
- c. [csf.dns] [dns::mapFromWindowsDNSResult] - \*----\* DNS query \_cuplogin.\_tcp.uclab.com. has failed: DNS name does not exist.
- d. [csf.dns] [dns::DnsUtils::executeSRVRecordQuery] - About to make DNS SRV record query '\_collab-edge.\_tls.uclab.com.'
- e. [csf.dns] [dns::mapFromWindowsDNSResult] - \*----\* DNS query \_collab-edge.\_tls.uclab.com. has succeeded.

Jabber has successfully received SRV records for collab edge. Hence Jabber needs to send a get\_edge\_config, however because this is sent over a secure http tunnel (https), jabber needs to setup a TLS connection to Expressway-E

## 2. SECURE HTTP CONNECTION (TLS CONNECTION)

Jabber sets up a TLS connection to expressway-E before sending edge https request. Excerpts of certificate exchange and verification shown below:

```
--  
--  
2014-09-01 21:59:13,624 DEBUG [0x000002bc] [netutils\src\http\CurlHttpUtils.cpp(261)] [csf.httpclient] [http::CurlHttpUtils::curlSSLCallback] - fqdn : uclabexpwe01.uclab.com

'valid'
```

## 3. Get\_Edge\_Config

Once the https tunnel is setup jabber proceeds to request edge configuration from Expressway-E

```
csf.edge] [edge::RecentlyFailedServers::isRecentlyFailed] - server [uclabexpwe01.uclab.com] has not recently failed  
[csf.edge] [edge::GlobalEdgeStateImpl::attemptServer] - Attempting request with host name:uclabexpwe01.uclab.com, port:8443  
[csf.httpclient] [http::BasicHttpClientImpl::execute] - Edge policy enforced successfully with transformed Url:  
https://uclabexpwe01.uclab.com:8443/dWNsYWluY29t/get\_edge\_config?service\_name=\_cisco-uds&service\_name=\_cuplogin
```

```
csf.httpclient] [http::CurlHttpUtils::configureEasyRequest] - *----* Making HTTP request to:  
https://uclabexpwe01.uclab.com:8443/dWNsYWluY29t/get\_edge\_config?service\_name=\_cisco-uds&service\_name=\_cuplogin.
```

## 3a. Expw-E sends HTTP get edge config to Expway-C

```
2014-09-01T20:59:13+00:00 uclabexpwe01 traffic_server[11402]: UTCTime="2014-09-01 20:59:13,777" Module="network.http.trafficserver"  
Level="DEBUG": Detail="Sending Request" Txn-id="368" Dst-ip="127.0.0.1" Dst-port="34306" Tunnel-dst-host="uclabexpwc02"  
HTTPMSG:  
|GET http://vcs_control.uclab.com:8443/dWNsYWluY29t/get_edge_config?service_name=_cisco-uds&service_name=_cuplogin HTTP/1.1  
Authorization: xxxxx  
Host: vcs_control.uclab.com:8443  
Accept: */*
```

User-Agent: Jabber-Win-879  
X-Forwarded-For: 10.106.4.73  
Via: https/1.1 vcs[0A6A0451] (ATS)  
5. ExpwC performs SRV query

### 3d. Expw-C sends a HTTP 200 OK to expw-E and the resulting edge\_server\_config details in an XML format as shown below:

```
<?xml version='1.0' encoding='UTF-8'?>
<getEdgeConfigResponse version="1.0">
<serviceConfig><service><name>_cisco-phone-tftp</name><error>NameError</error></service>
<service><name>_cuplogin</name><server><priority>0</priority><weight>0</weight><port>8443</port><address>cimp-pub.uclab.com</address></server>
<server><priority>0</priority><weight>0</weight><port>8443</port><address>cimp-sub.uclab.com</address></server></service>
<service><name>_cisco-uds</name><server><priority>0</priority><weight>0</weight><port>8443</port><address>uclabcucm-sub.uclab.com</address></server>
<server><priority>0</priority><weight>0</weight><port>8443</port><address>uclabcucm-pub.uclab.com</address></server></service>

<edgeConfig><sipEdgeServer><server><address>uclabexpwe01.uclab.com</address><tlsPort>5061</tlsPort></server>
<server><address>uclabexpwe02.uclab.com</address><tlsPort>5061</tlsPort></server></sipEdgeServer>
<sipRequest><route>&lt;sip:10.106.4.85:5061;transport=tls;zone-id=1;directed;lr&gt;</route>
<route>&lt;sip:10.106.4.80:5061;transport=tls;zone-id=1;directed;lr&gt;</route></sipRequest>
<xmppEdgeServer><server><address>uclabexpwe01.uclab.com</address><tlsPort>5222</tlsPort></server>
<server><address>uclabexpwe02.uclab.com</address><tlsPort>5222</tlsPort></server></xmppEdgeServer>
<httpEdgeServer><server><address>uclabexpwe01.uclab.com</address><tlsPort>8443</tlsPort></server>
<server><address>uclabexpwe02.uclab.com</address><tlsPort>8443</tlsPort></server></httpEdgeServer><turnEdgeServer>
<userUdsServer><server><address>uclabcucm-pub</address><tlsPort>8443</tlsPort></server></userUdsServer></edgeConfig></getEdgeConfigResponse>
```

### 3e. Expw-e sends HTTP 200 OK to jabber

+++Jabber receives 200 OK from expw-E+++

```
[csf.httpclient] [http::CurlHttpUtils::getResponseCode] - Http Response Code = [200] for request [1].
[csf.httpclient] [http::executeImpl] - *----* HTTP response from:
https://uclabexpwe01.uclab.com:8443/dWNsYWluY29t/get_edge_config?service_name=_cisco-uds&service_name=_cuplogin[1] -> 200.
```

10.

++++Next Jabber sends Devices request for the user, before this happens jabber must authenticate the user again the CCMIP address.. as shown below..  
2014-09-01 21:59:26,593 DEBUG [0x00000a8c] [src\config\CCMCIPClient.cpp(54)] [csf.ecc] [ecc::CCMCIPClient::fetchDevices] - Result is OK getting httpResult

```

**NB: This process of delegated credential checking is very crucial to jabber registering with CUCM.**

**If the certificate exchange fails, the jabber wont register, hence the user will not have any softphone or desk phone control..**

"Example of failure is shown below:

**+++Here Jabber complains that the Expw-E cert is not supported. (this is because the CA used MD5 algorithm to sign certificates, which expressway no longer supports). Once this happens, Expw-E-e does not proceed to send the SIP REGISTER message to Expw-C.+++**

```
