UCCX 11.5 Web Services Feb 2, 2017 3:48 AM

Good Morning all. Been experimenting with AXL web services within CUCM 10, and wanted to enquire if a similar facility was available within UCCX11.5, and if so what the endpoint URL typically is? Thanks in advance

Similar facility is available in CCX. Unlike CUCM AXL which is SOAP based WebServices, CCX is exposing RESTful webservices for configurations. Please find more details here: [Cisco DevNet: Express Configuration API - Overview](#)
