API Help: Get List for Prompt Files and Folder Nov 24, 2016 6:27 AM

I'm trying to run the **get List for Prompt Files and Folder** GET API to retrieve all the names and paths of my prompts.

https://my-server/adminapi/prompt/en_GB/

It's returned the values of the folders inside that directory but my prompts are stored in a few different folders. Does anyone know if there's a way of getting the API to return all .wav files, regardless of the folder they are in?

This just avoids the need to run a separate request for each one of my folders. E.g.

https://my-server/adminapi/prompt/en_GB/Folder1/
https://my-server/adminapi/prompt/en_GB/Folder2/
https://my-server/adminapi/prompt/en_GB/Folder3/

Many thanks
Rob

Re: API Help: Get List for Prompt Files and Folder Nov 25, 2016 10:04 AM

The API returns all the folders and files in the directory specified.

Eg. https://my-server/adminapi/prompt/en_GB/ would return Folder1,Folder2,Folder3 etc and File1,File2,File3 etc.

As Config REST APIs are for machine to machine communications (not mainly for manual invocation), it is very easy to write a custom application which uses this API to traverse the directory structure by checking the 'Folder' Tag returned and invoke the same API on that 'Folder' and so on.

So a convenience version for manually invoking and listing all the files recursively in a giver folder does not exist.
