**UCCX API to get Application list and real time call couts** Jan 29, 2016 10:54 PM

Hi,

I am trying to use UCCX Config Express API to get all the list of applications created in system and the active call - real time for a custom monitoring dashboard purpose.

Can someone please help to understand feasibility of this. if yes, please redirect to me with the correct documentation.

Thanks,

JP

Hey.

You can get all the realtime stats for CSQ here

<http://<UCCX IP>:9080/realtime/VoiceIAQStats>

Im don't think you can get the application stats in realtime.

If you want to see the schema for realtime stats you can see it here (version 10 + )

<http://<UCCX IP>:9080/realtime/schema>
