Modify Campaign State - results in Method Not Allowed Nov 19, 2015 9:19 AM

I'm trying to use the adminapi to set a campaign state from disable to enabled using:

<https://<server-IP-address>/adminapi/campaign/3/state/enable>

I receive the following XML response:

```
<?xml version="1.0" encoding="UTF-8" standalone="yes"?>
<apiErrors>
  <apiError>
    <errorData>Method Not Allowed</errorData>
    <errorMessage>The method specified in the Request-Line is not allowed for the resource identified by the
Request-URI</errorMessage>
    <errorType>405</errorType>
  </apiError>
</apiErrors>
```

What am I doing wrong, here?

Response to normal adminapi campaign query is successful:

<https://<server-IP-address>/adminapi/campaign/3>

Response:

```
<?xml version="1.0" encoding="UTF-8"?>
<campaign>
  <self>https://<server\_snipped>/adminapi/campaign/3</self>
  <campaignId>3</campaignId>
  <campaignName>OutboundIVR-Test</campaignName>
  <enabled>>false</enabled>
  <description>Testing Outbound Dialer</description>
  <startTime>00:00</startTime>
  <endTime>23:59</endTime>
  <timeZone>Central Standard Time</timeZone>
  <campaignType>IVR</campaignType>
  <dialerType>PROGRESSIVE</dialerType>
  <pendingContacts>0</pendingContacts>
  <typeSpecificInfo>
```

Modify Campaign State - results in...

```
<oblvrProgressive>
  <campaignCallingNum><stuff_snipped></campaignCallingNum>
  <maxDialAttempts>2</maxDialAttempts>
  <callbackTimeLimit>2</callbackTimeLimit>
  <treatLowVolAsVoice>true</treatLowVolAsVoice>
  <noAnswerRingLimit>40</noAnswerRingLimit>
  <abandonedCallWaitTime>2</abandonedCallWaitTime>
  <retryNoAnswerDelay>4</retryNoAnswerDelay>
  <retryBusySignalDelay>4</retryBusySignalDelay>
  <retryCustAbandonedDelay>0</retryCustAbandonedDelay>
  <retryDialerAbandonedDelay>0</retryDialerAbandonedDelay>
  <applicationTrigger name="199999">
    <refURL><stuff_snipped>/adminapi/trigger/199999</refURL>
  </applicationTrigger>
  <numDedicatedPorts>1</numDedicatedPorts>
  <linesPerPort>1.0</linesPerPort>
  <ansMachineTreatment>TRANSFER_TO_IVR</ansMachineTreatment>
</oblvrProgressive>
</typeSpecificInfo>
</campaign>
```

Campaigns and Triggers are functioning when enabled. Campaigns become disabled daily after midnight. I want to write a script that will re-enable them.

Check the parameter you are sending. You have the correct URL path, but some parameters that are expected are not being provided.
