**Access windows filesystem from UCCX 9.X** Jun 17, 2014 6:04 AM

Is it possible to access dll's and applications running on Windows environment from UCCX 9.X system using IVR scripts?

thx

Question is not clear.

In UCCX 9.X, the out of the box mechanism is HTTP requests and DB steps - to talk to the outside world. However, one can write custom java code to do RMI etc. But I am not sure if there is any way to invoke dll's and applications directly.

Note that CCX 9.X is built on a Linux OS.

Let us know if there is any specific question.
