**DBwrite step Error** Apr 23, 2018 12:08 AM

Hi Everyone !

I am writing a simple survey script to store the customer response through post call survey concept.

my requirement is put forward couple of questions and accept the feedback from the customer and stored in external  SQL Database.

I am facing some issues to implement the script and getting error in DBwrite step.. as I am beginner to scripting so I don't have an idea how to create the DBstep.. please find my script and let me know the problem,

Please find the attached script and error screen shots

Thanks in advanced.
