

# How to enhance your collaboration workflows across apps

Product Management Team – Webex Strategic Integrations

September 22, 2021

# What is an Integration?

An integration connects Webex capabilities to one or more third-party applications to enable both applications to work together by:

- Sharing and storing copies of data
- Accessing partner functionality from Webex interface or Webex functionality from partner interface
- Integrating flow of activities between Webex and other systems

# Why Integrate?

## Streamlined Workflows

---

Minimize context switching between apps and lead to **increased user productivity**

## Richer Insights

---

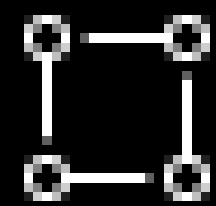

Aggregate relevant data generated across applications and make it available for **analytics**.

## Customer Satisfaction

---

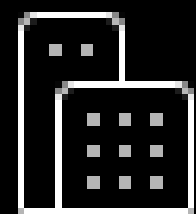

More productivity and efficiency make **customers happier**.

# Webex Integration Themes

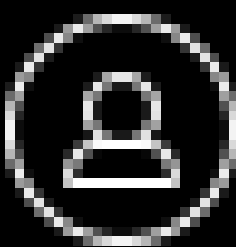

## Deep Integrations

Custom implementation to [unify experiences](#) between two applications such as OneDrive and Webex

## Verticals

Custom solutions with features tailored to a [specific vertical](#) such as Healthcare, Education etc.

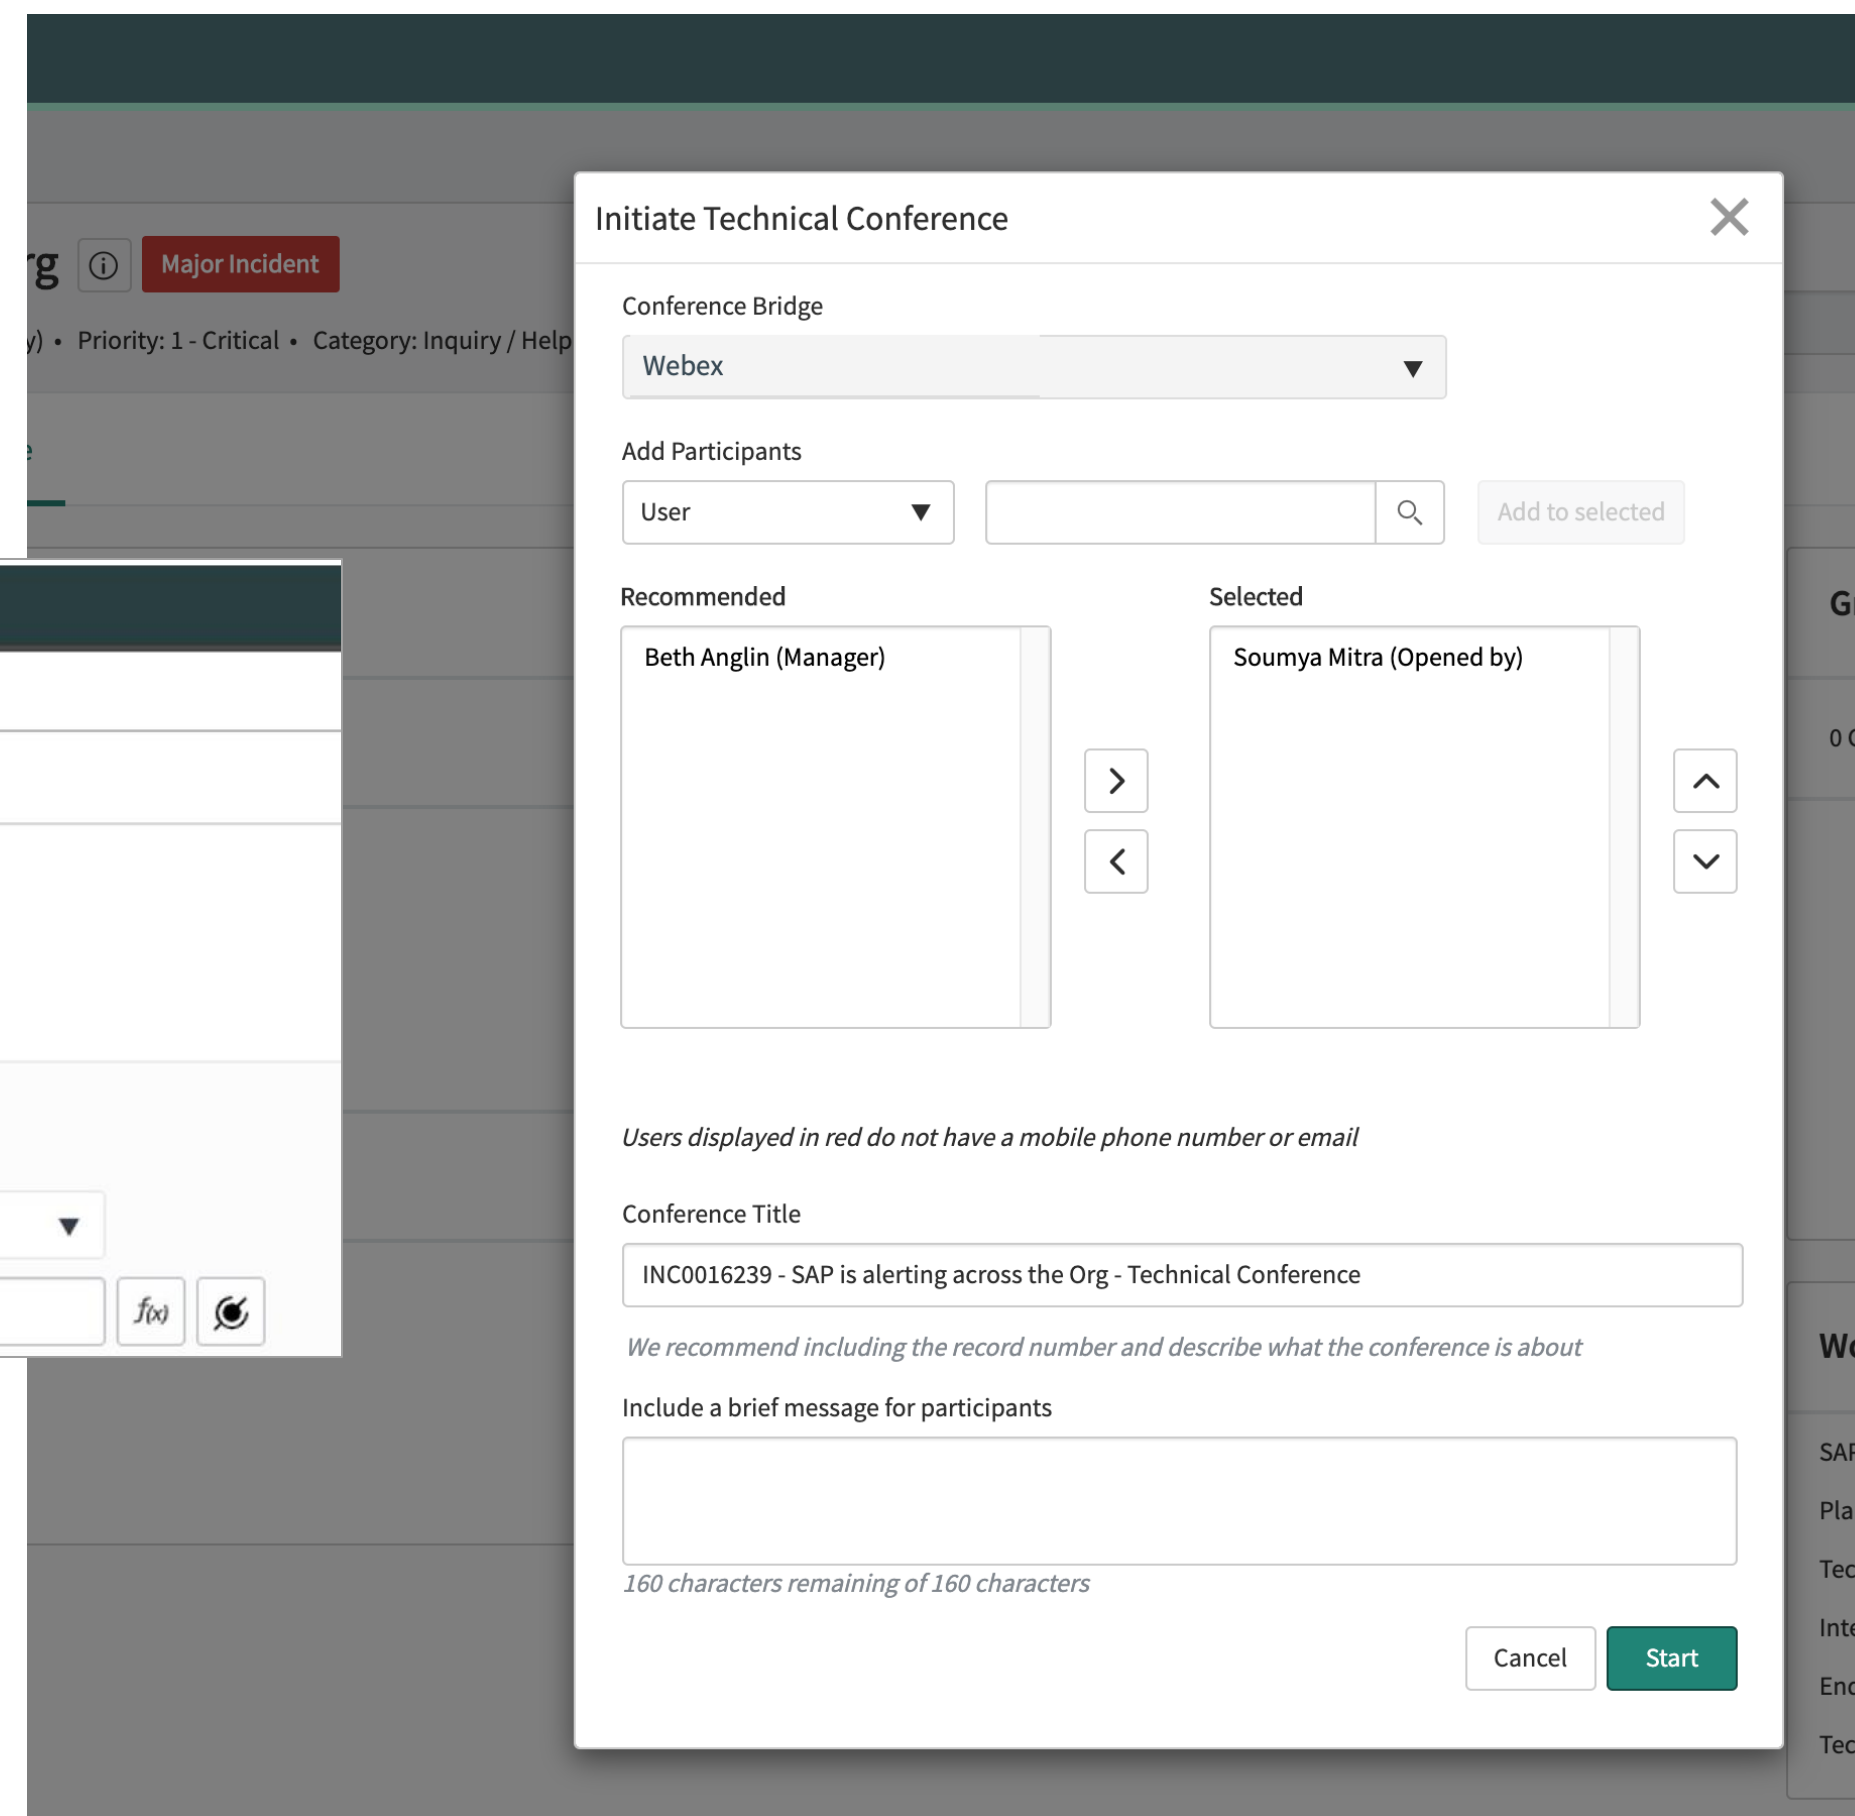

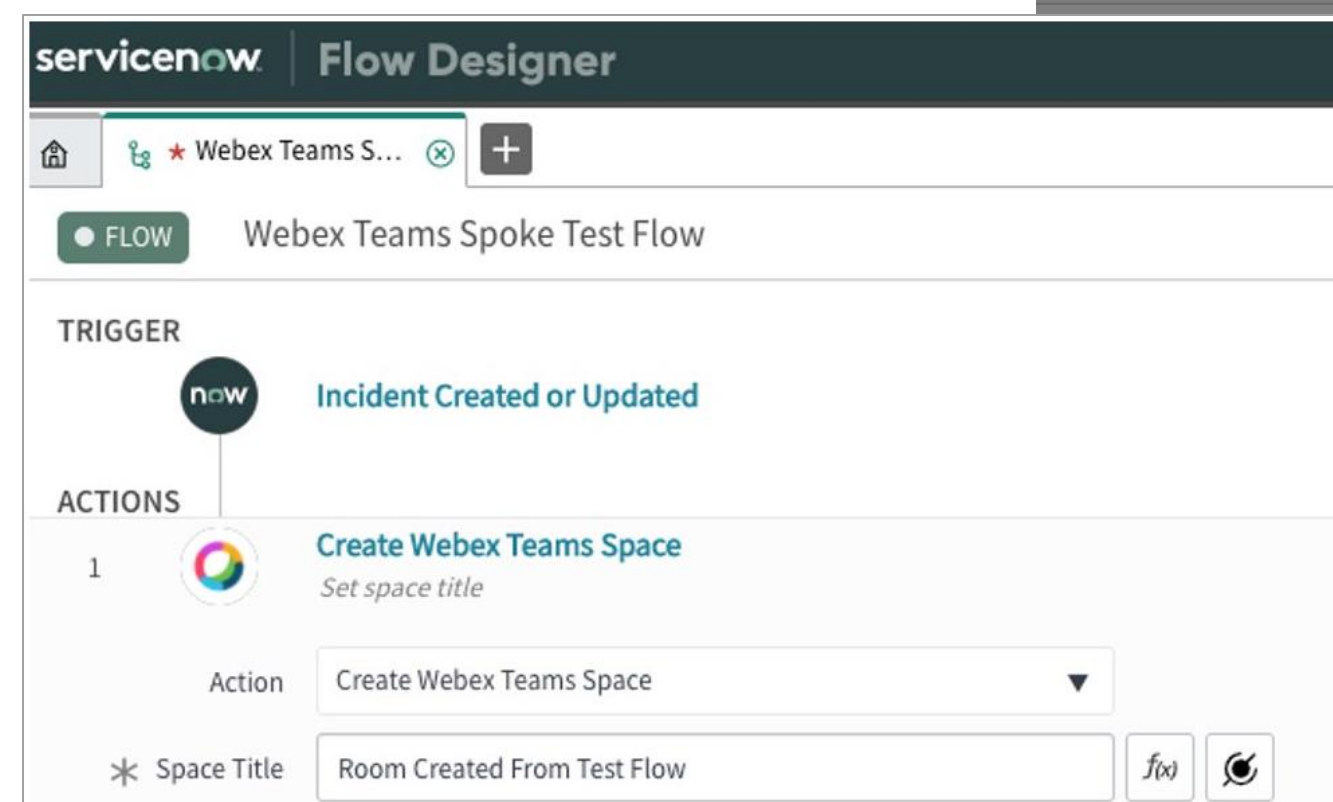

## Functional Operations

Custom solutions tailored to specific [operations](#) such as Incident Management for DevOps and IT Operation Teams

# Webex + CRMs

# ServiceNow

Major Incident Management  
Collab-related actions in workflows

Leverage the power of Webex for your support workflows

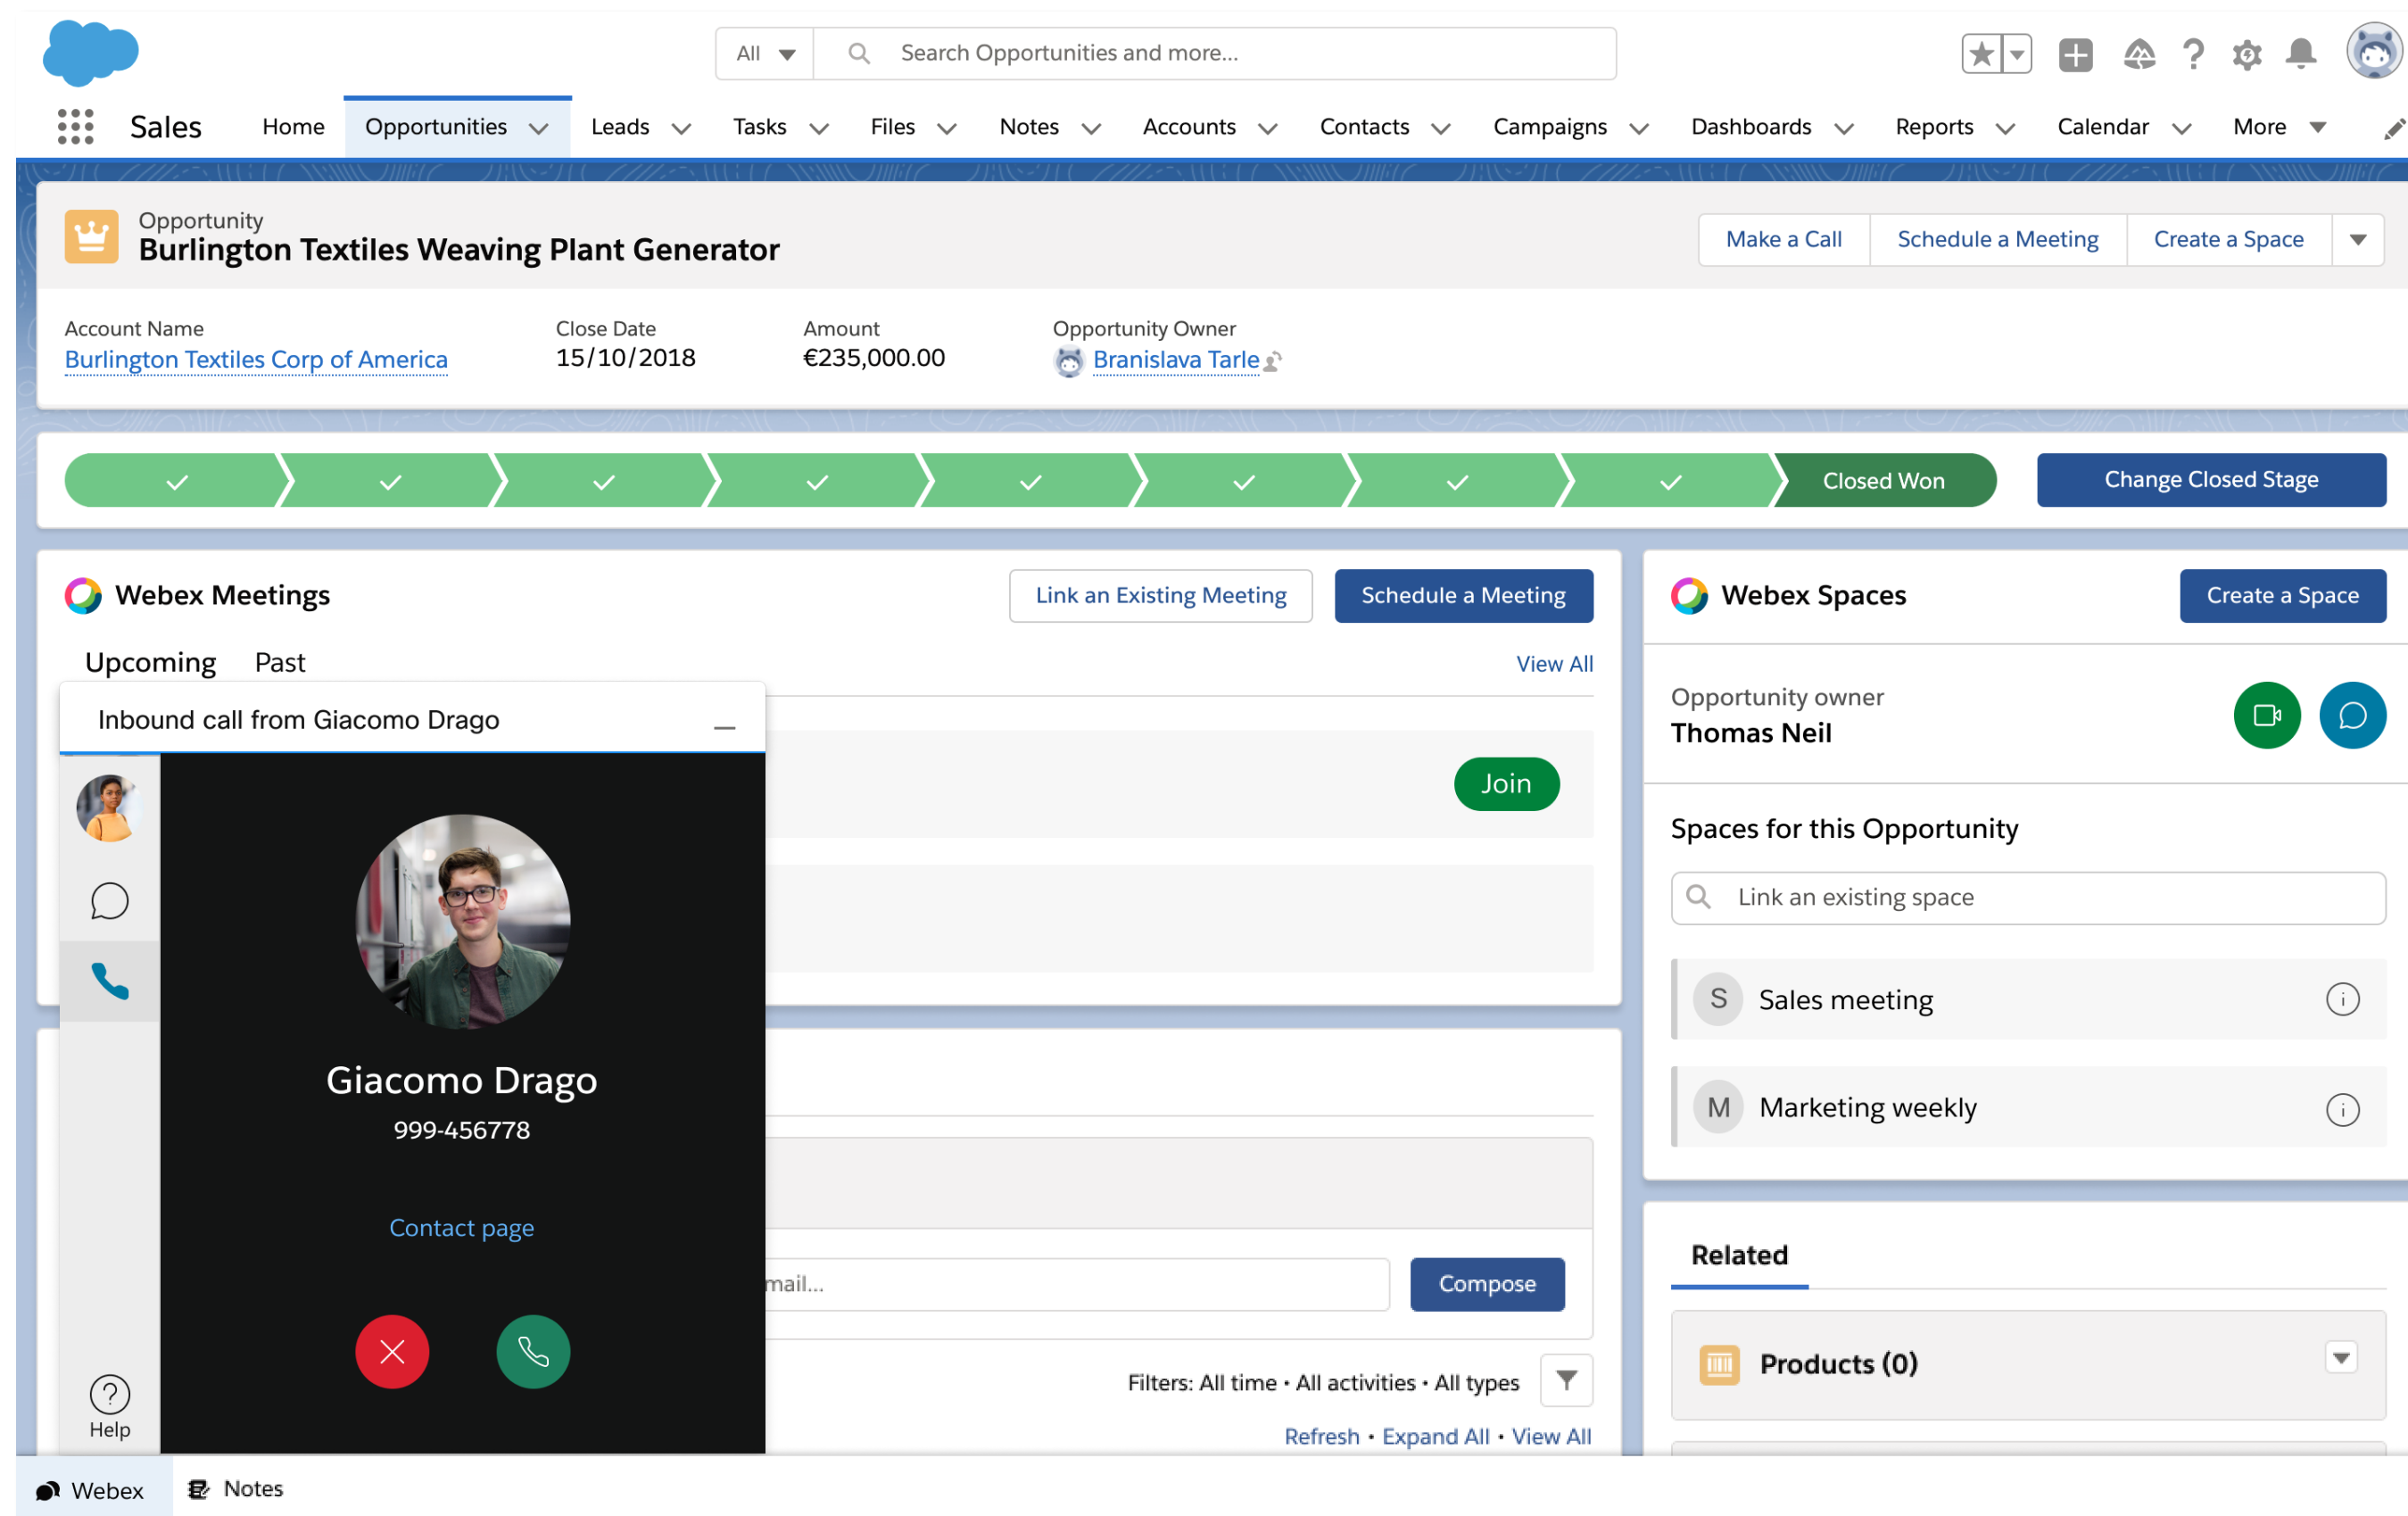

- Include collaboration actions in support workflows
- Manage Major Incidents by communicating via Webex Messaging and Meetings

## How to Enable

Customers download and install the Webex App from the ServiceNow app marketplace. It's free.

# Salesforce

Sales workflow support  
Incident management

## Power of Webex delivered where Sales and Service professionals' work

- Meetings, Messaging, Calling tied to Salesforce records
- Consolidate all the interactions that matter throughout the customer lifecycle

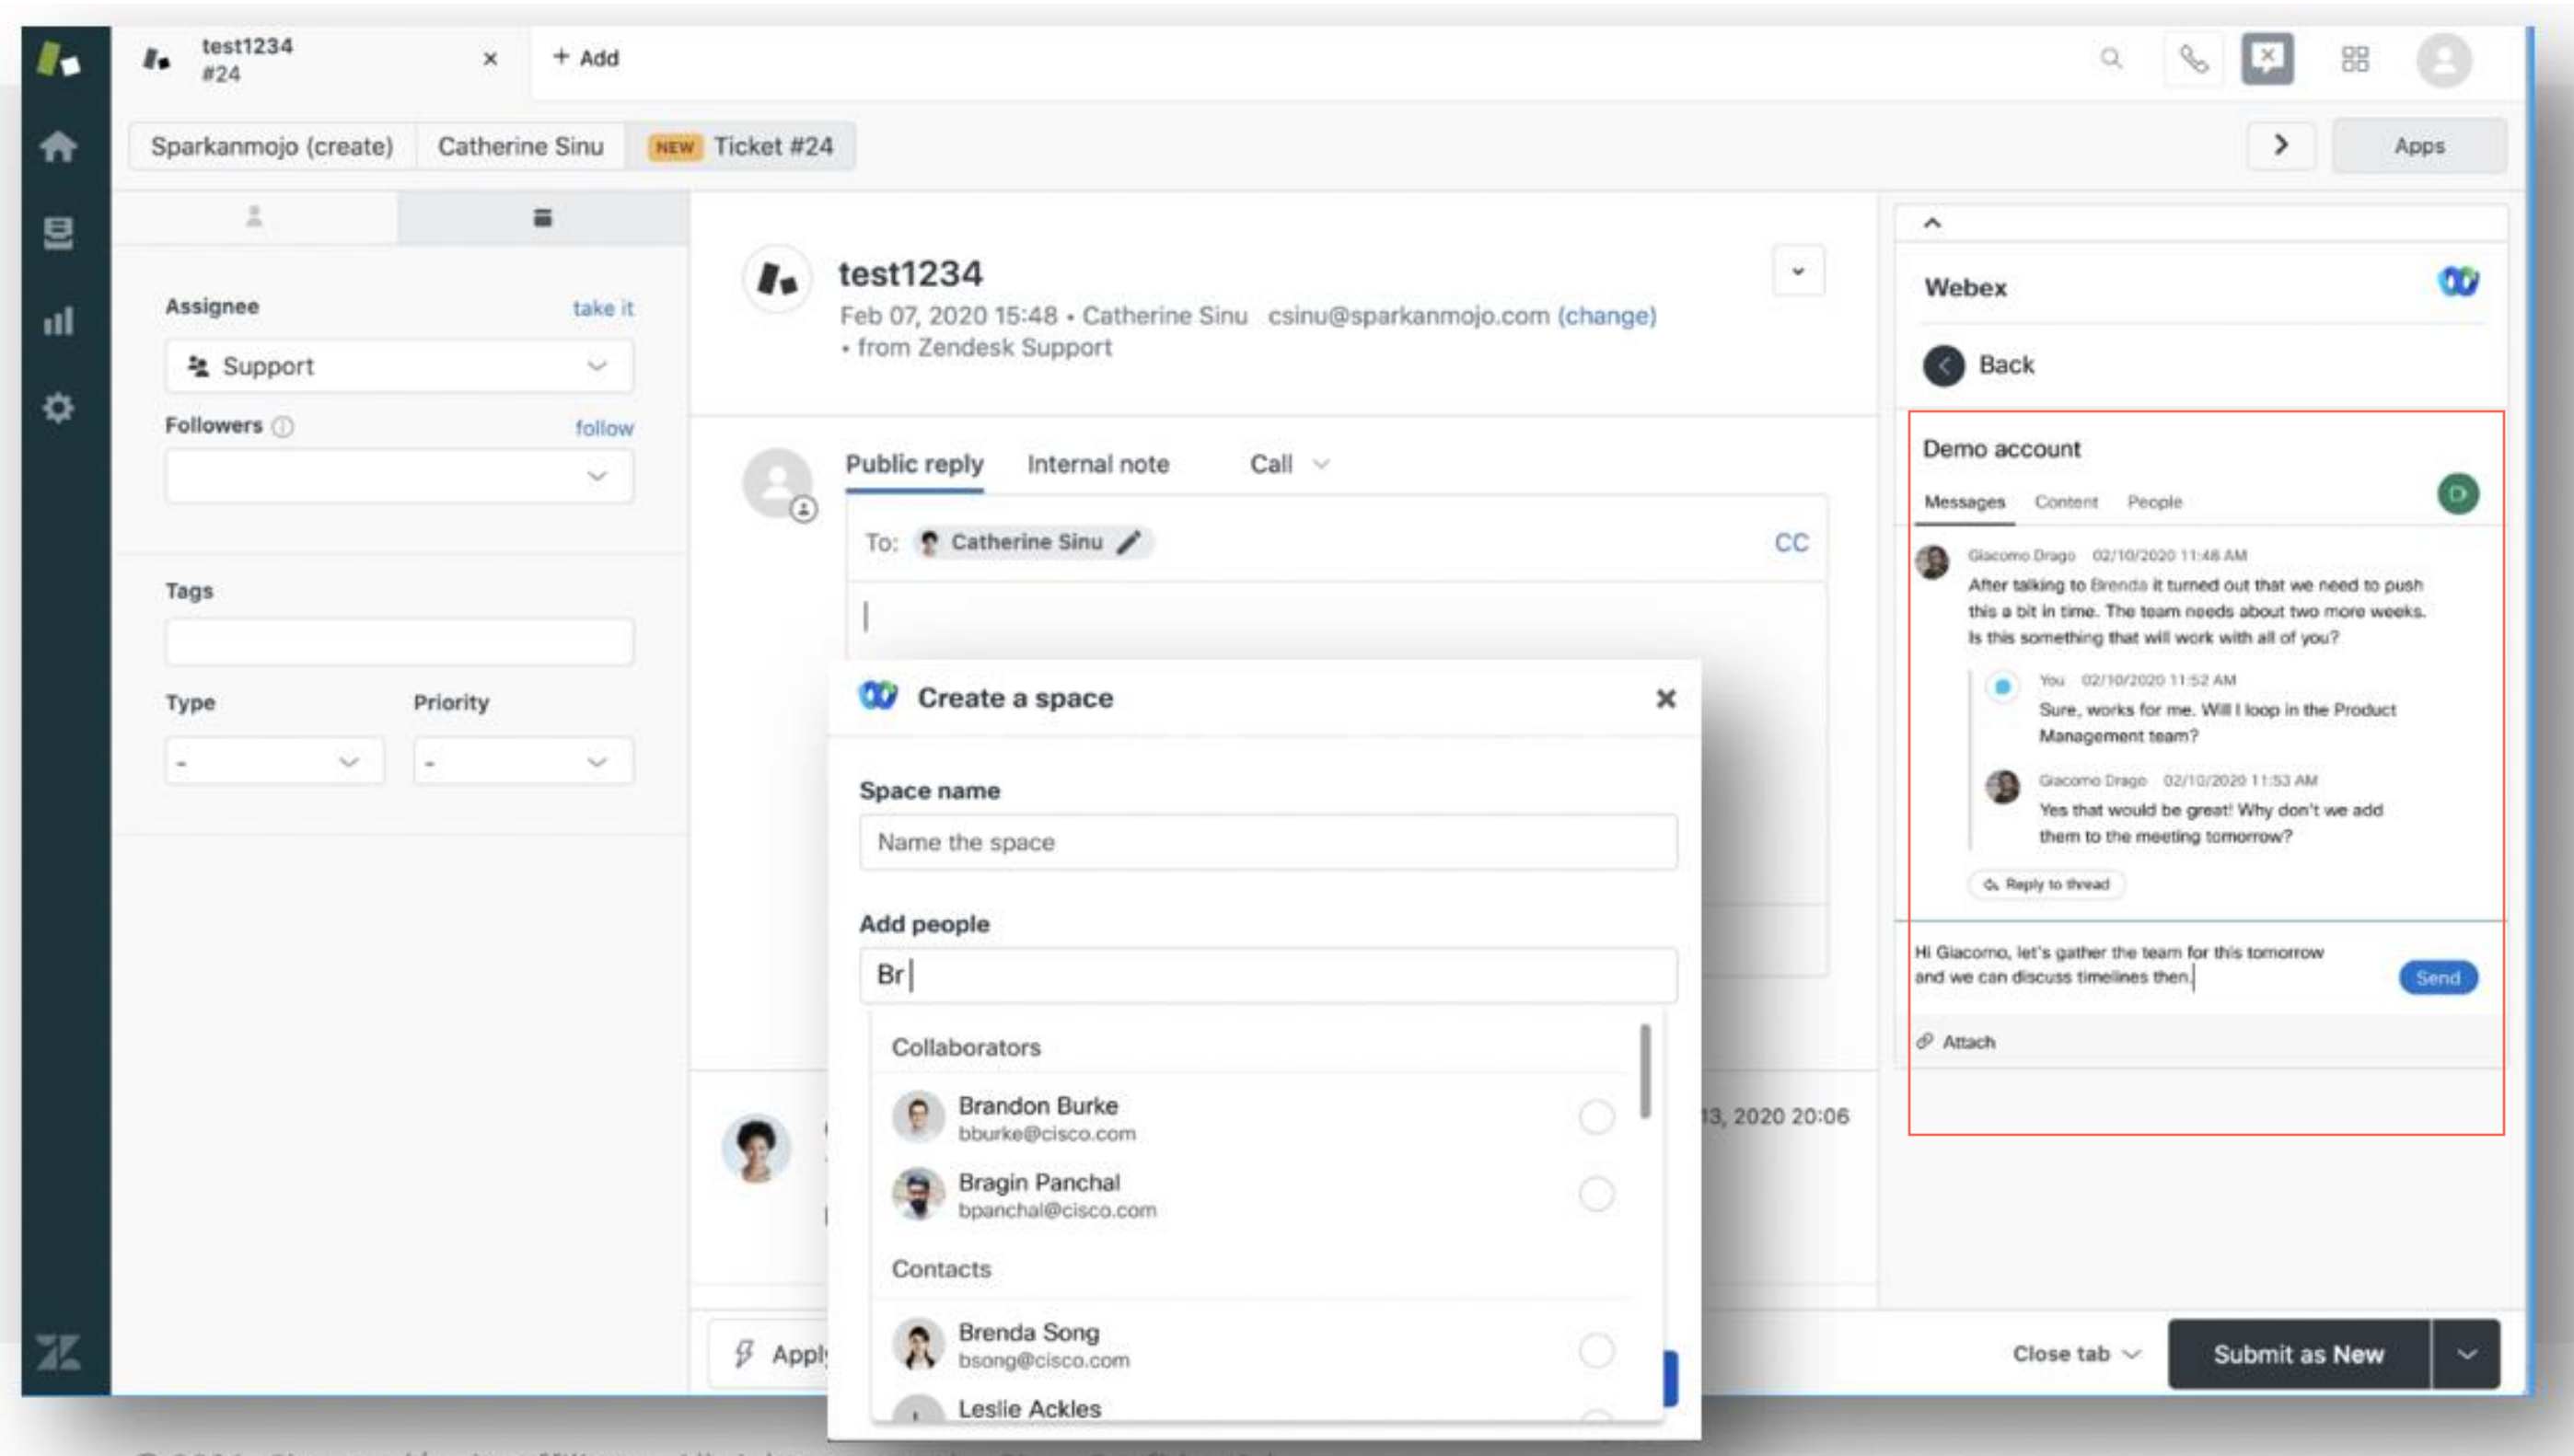

## How to Enable

Customers download and install the Webex App for Salesforce from the Webex AppHub

# Incident Management Workflows: Zendesk and Jira

Users can easily create a Webex space or start, schedule, and join a meeting for incident management

- Agents can start or schedule Webex meetings from the incident ticket
- Collaborators can join Webex meetings from the ticket
- For existing or new incident tickets, agents can create multiple spaces per incident
- Agents can name the spaces and invite any collaborators into the spaces
- Agents can link and unlink Webex spaces to the incident ticket
- At ticket resolution, collaborators can access any spaces' conversations and artifacts

**Continuous collaboration to increase team alignment and productivity**

- Simplify communications to get to ticket resolution faster
- Easily invite the right people into the conversation
- Quickly find all conversations and documentation associated with a ticket

## How to Enable

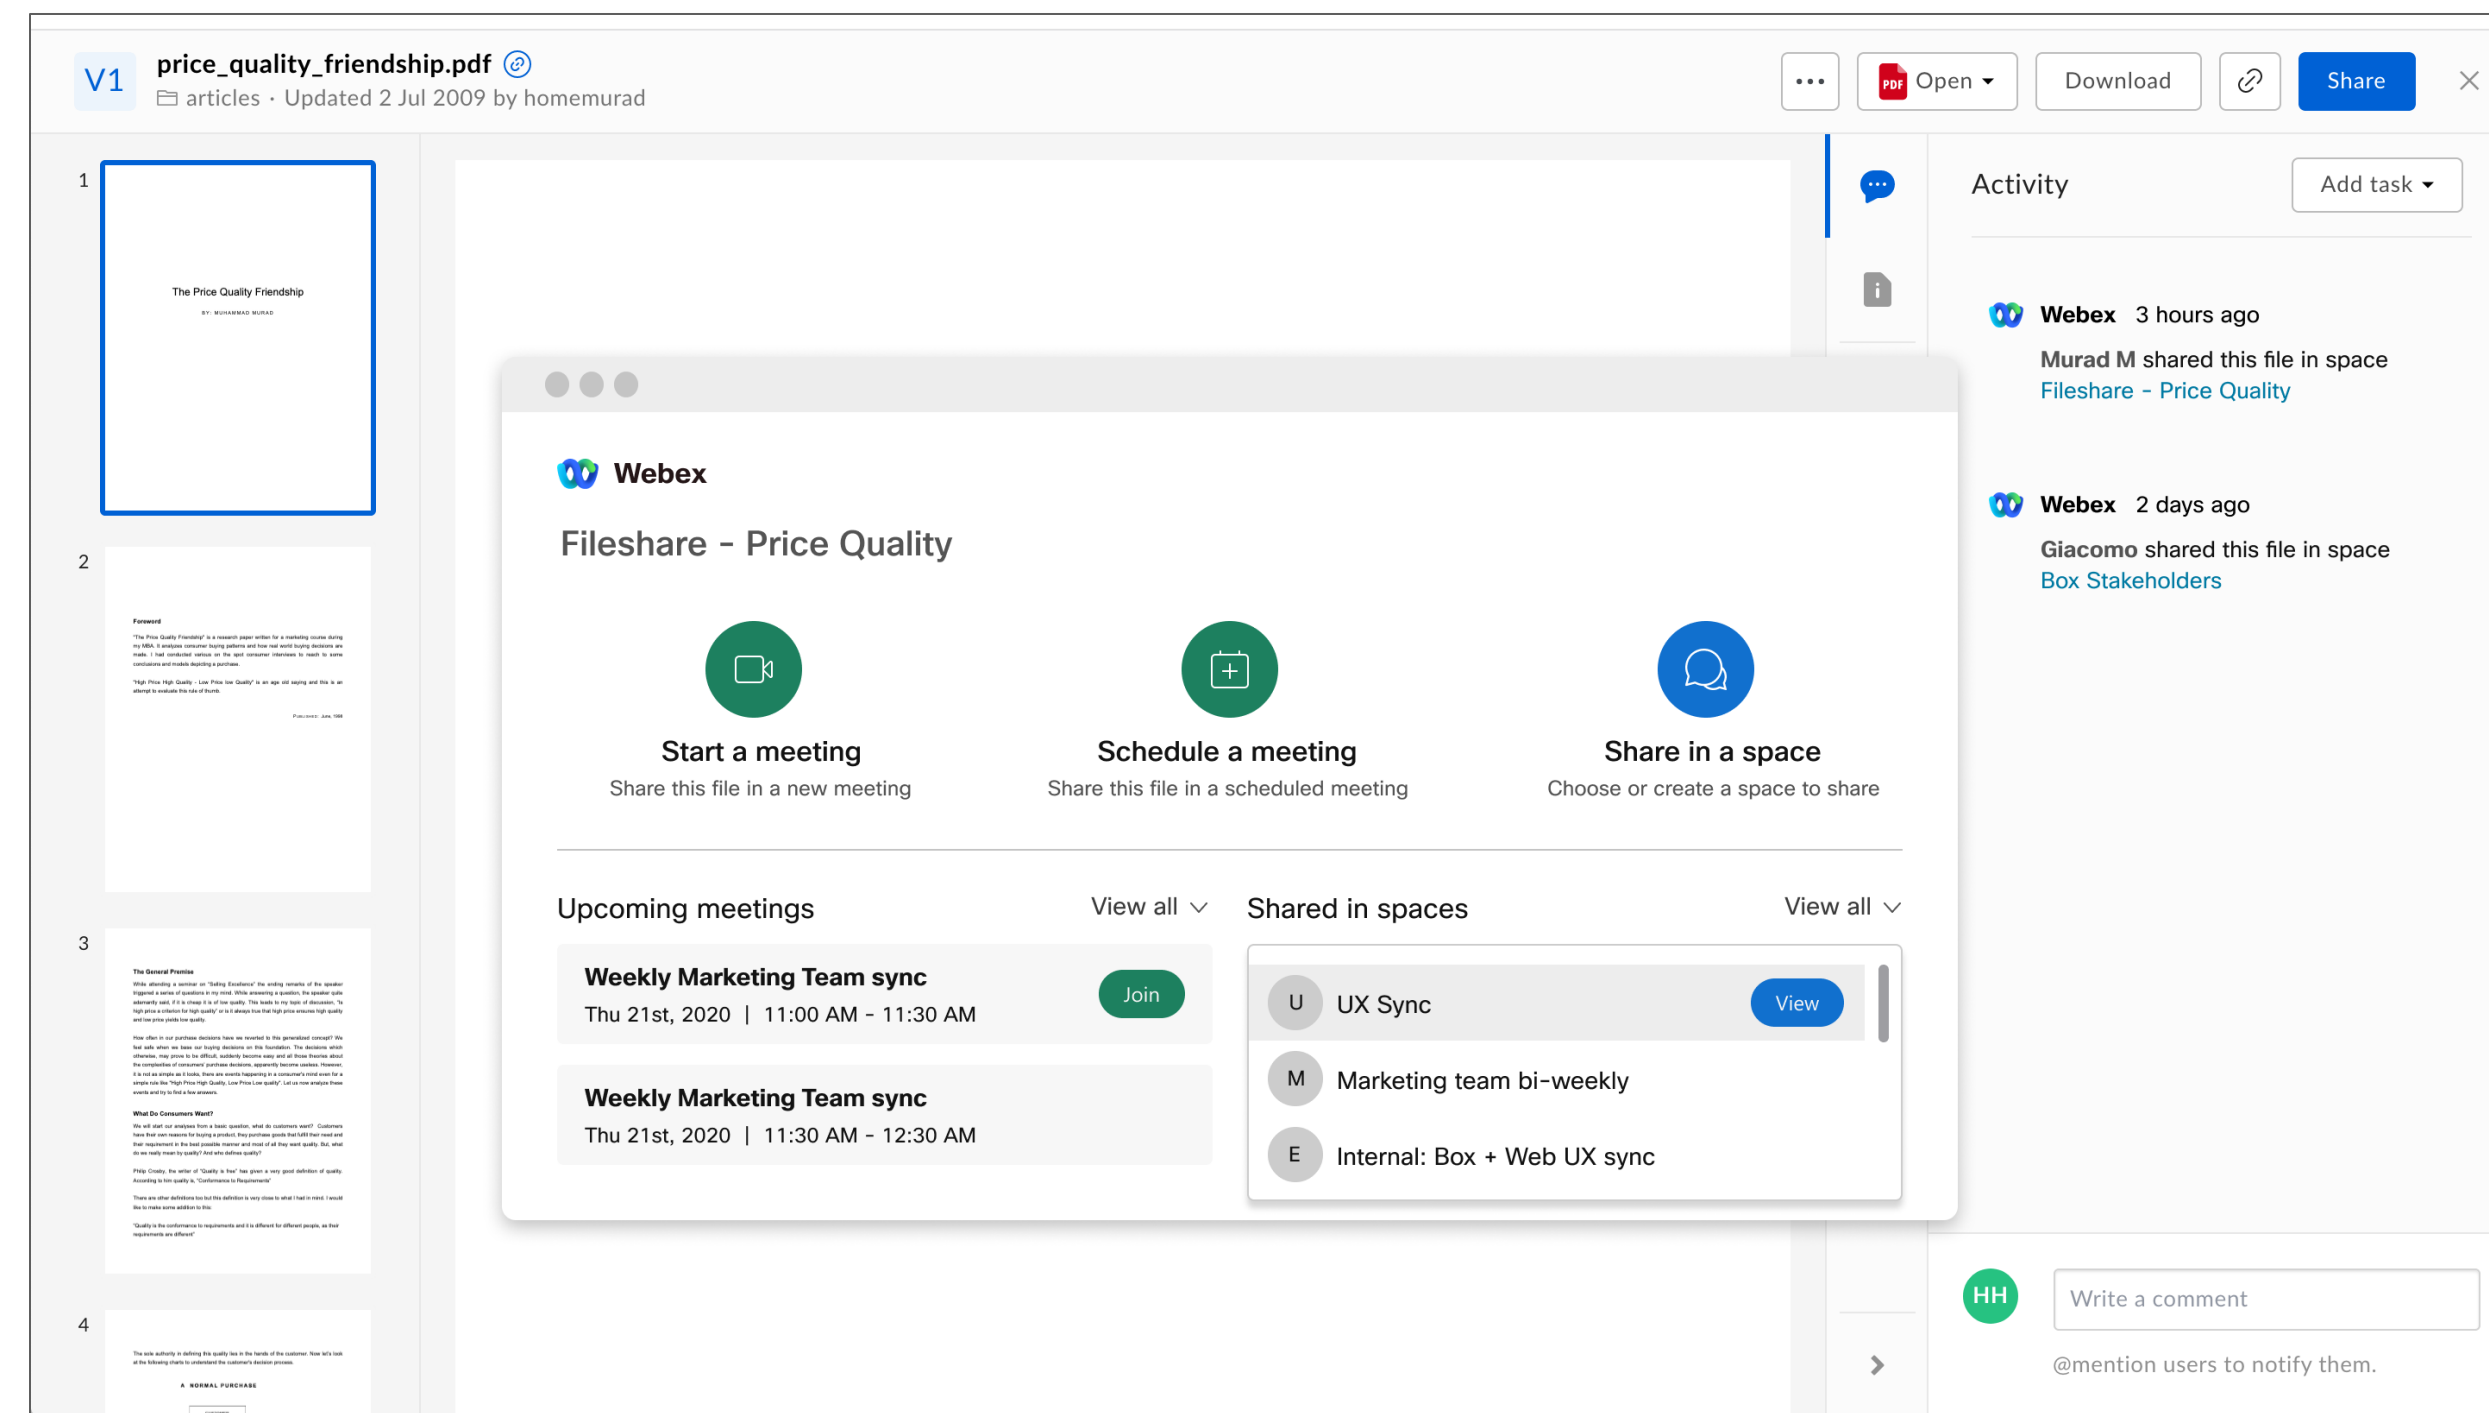

- Zendesk Admin installs Zendesk or Jira Webex App
- Webex Admin enables the Zendesk or Jira integration for their Webex site

# Webex + ECM

# Box

With the *Share in Webex* app for Box, you can:

- Start, Schedule or Join a Webex Meeting from Box
- Create a Webex space or Share in existing Webex space directly from Box
- Quickly access Box files from Webex meeting invites
- Easily add users from org to a meeting or new space created within Box

## Value Prop

- Simple click to meet face-to-face with file collaborators and **get to final approved file version faster**
- Find information easily with a **single unified view** for files, conversations, recordings, transcripts.

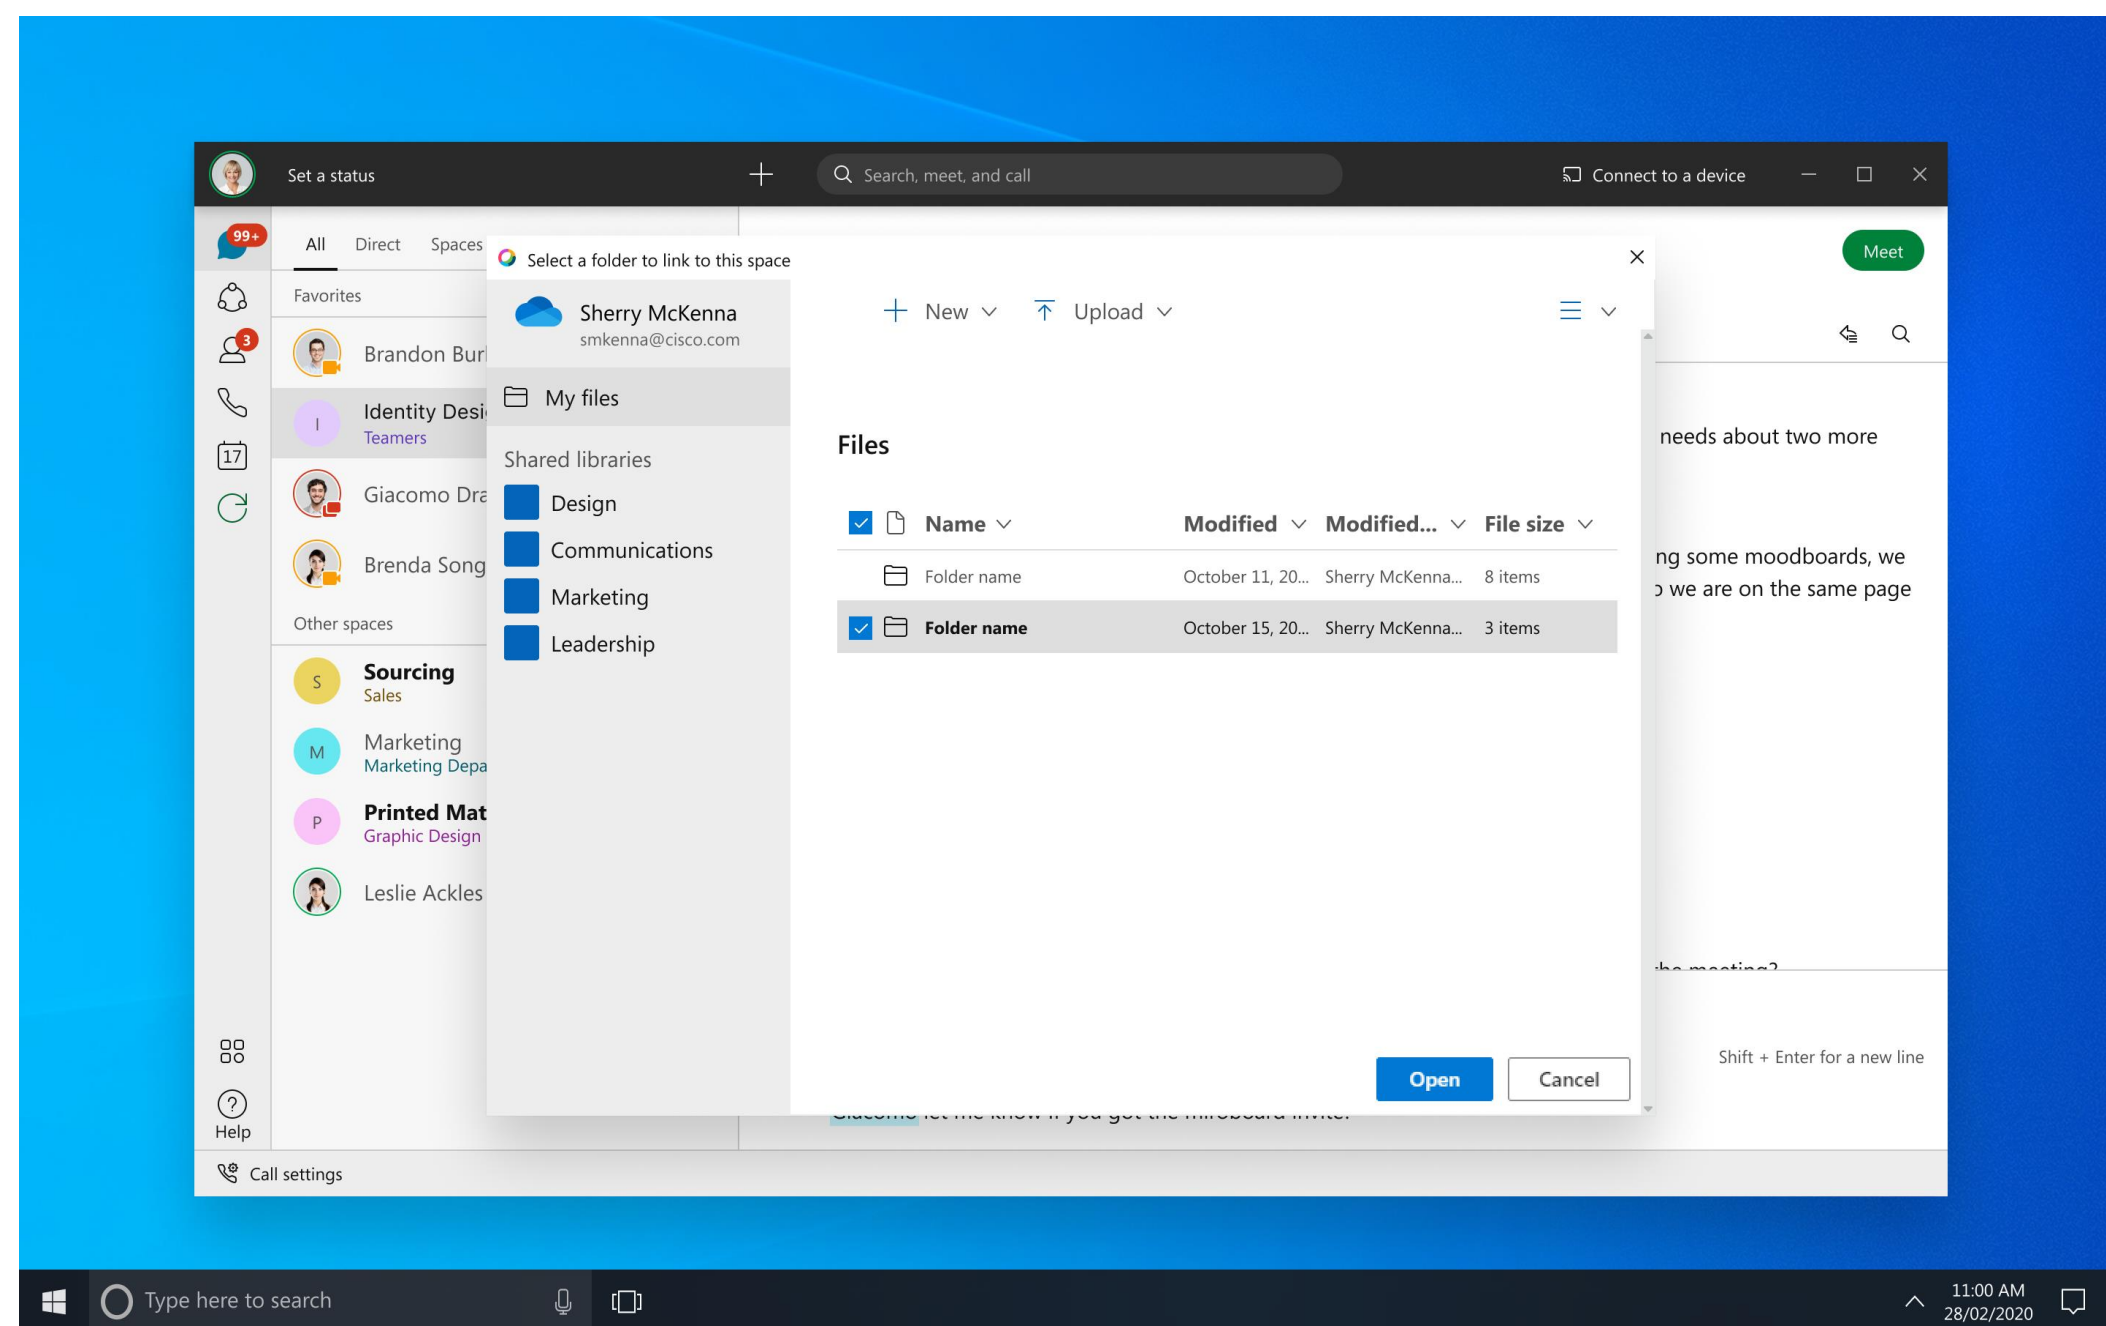

## How to Enable

- Enterprise: Box Admin enables "Share in Webex" app within Box Admin Console
- Self-Signup : Box user adds Apps from Box marketplace.

# Enterprise Content Management (ECM)

OneDrive, SharePoint Online, BOX, Google Drive file collaboration in Webex

- Share files in a space from any of the supported ECM partners
- Users in the space see thumbnails of shared files which they can open and view/edit inside Webex itself
- Admins can control ECM at an org or user level, and they can enable select ECMs for the org. Admins can also disable native Webex storage if at-least 1 ECM is enabled.
- **OneDrive/SharePoint online users can even choose to easily share files with people in a space from both Desktop and Mobile**
- **OneDrive and SharePoint users can also choose to link folders manually or create teams backed by groups on Microsoft 365, and keep membership and content access in-sync between the MS365 groups, SharePoint site and Webex spaces(team)**
- **Improved and quick process for users to connect to ECM accounts while sharing or viewing files**

Sharing and working on documents together is an integral collaboration experience.

- Reduce app context switching by working on documents from within Webex
- Reduce file sprawl and ensure teams can continue with their workflow of using content management tools within Webex

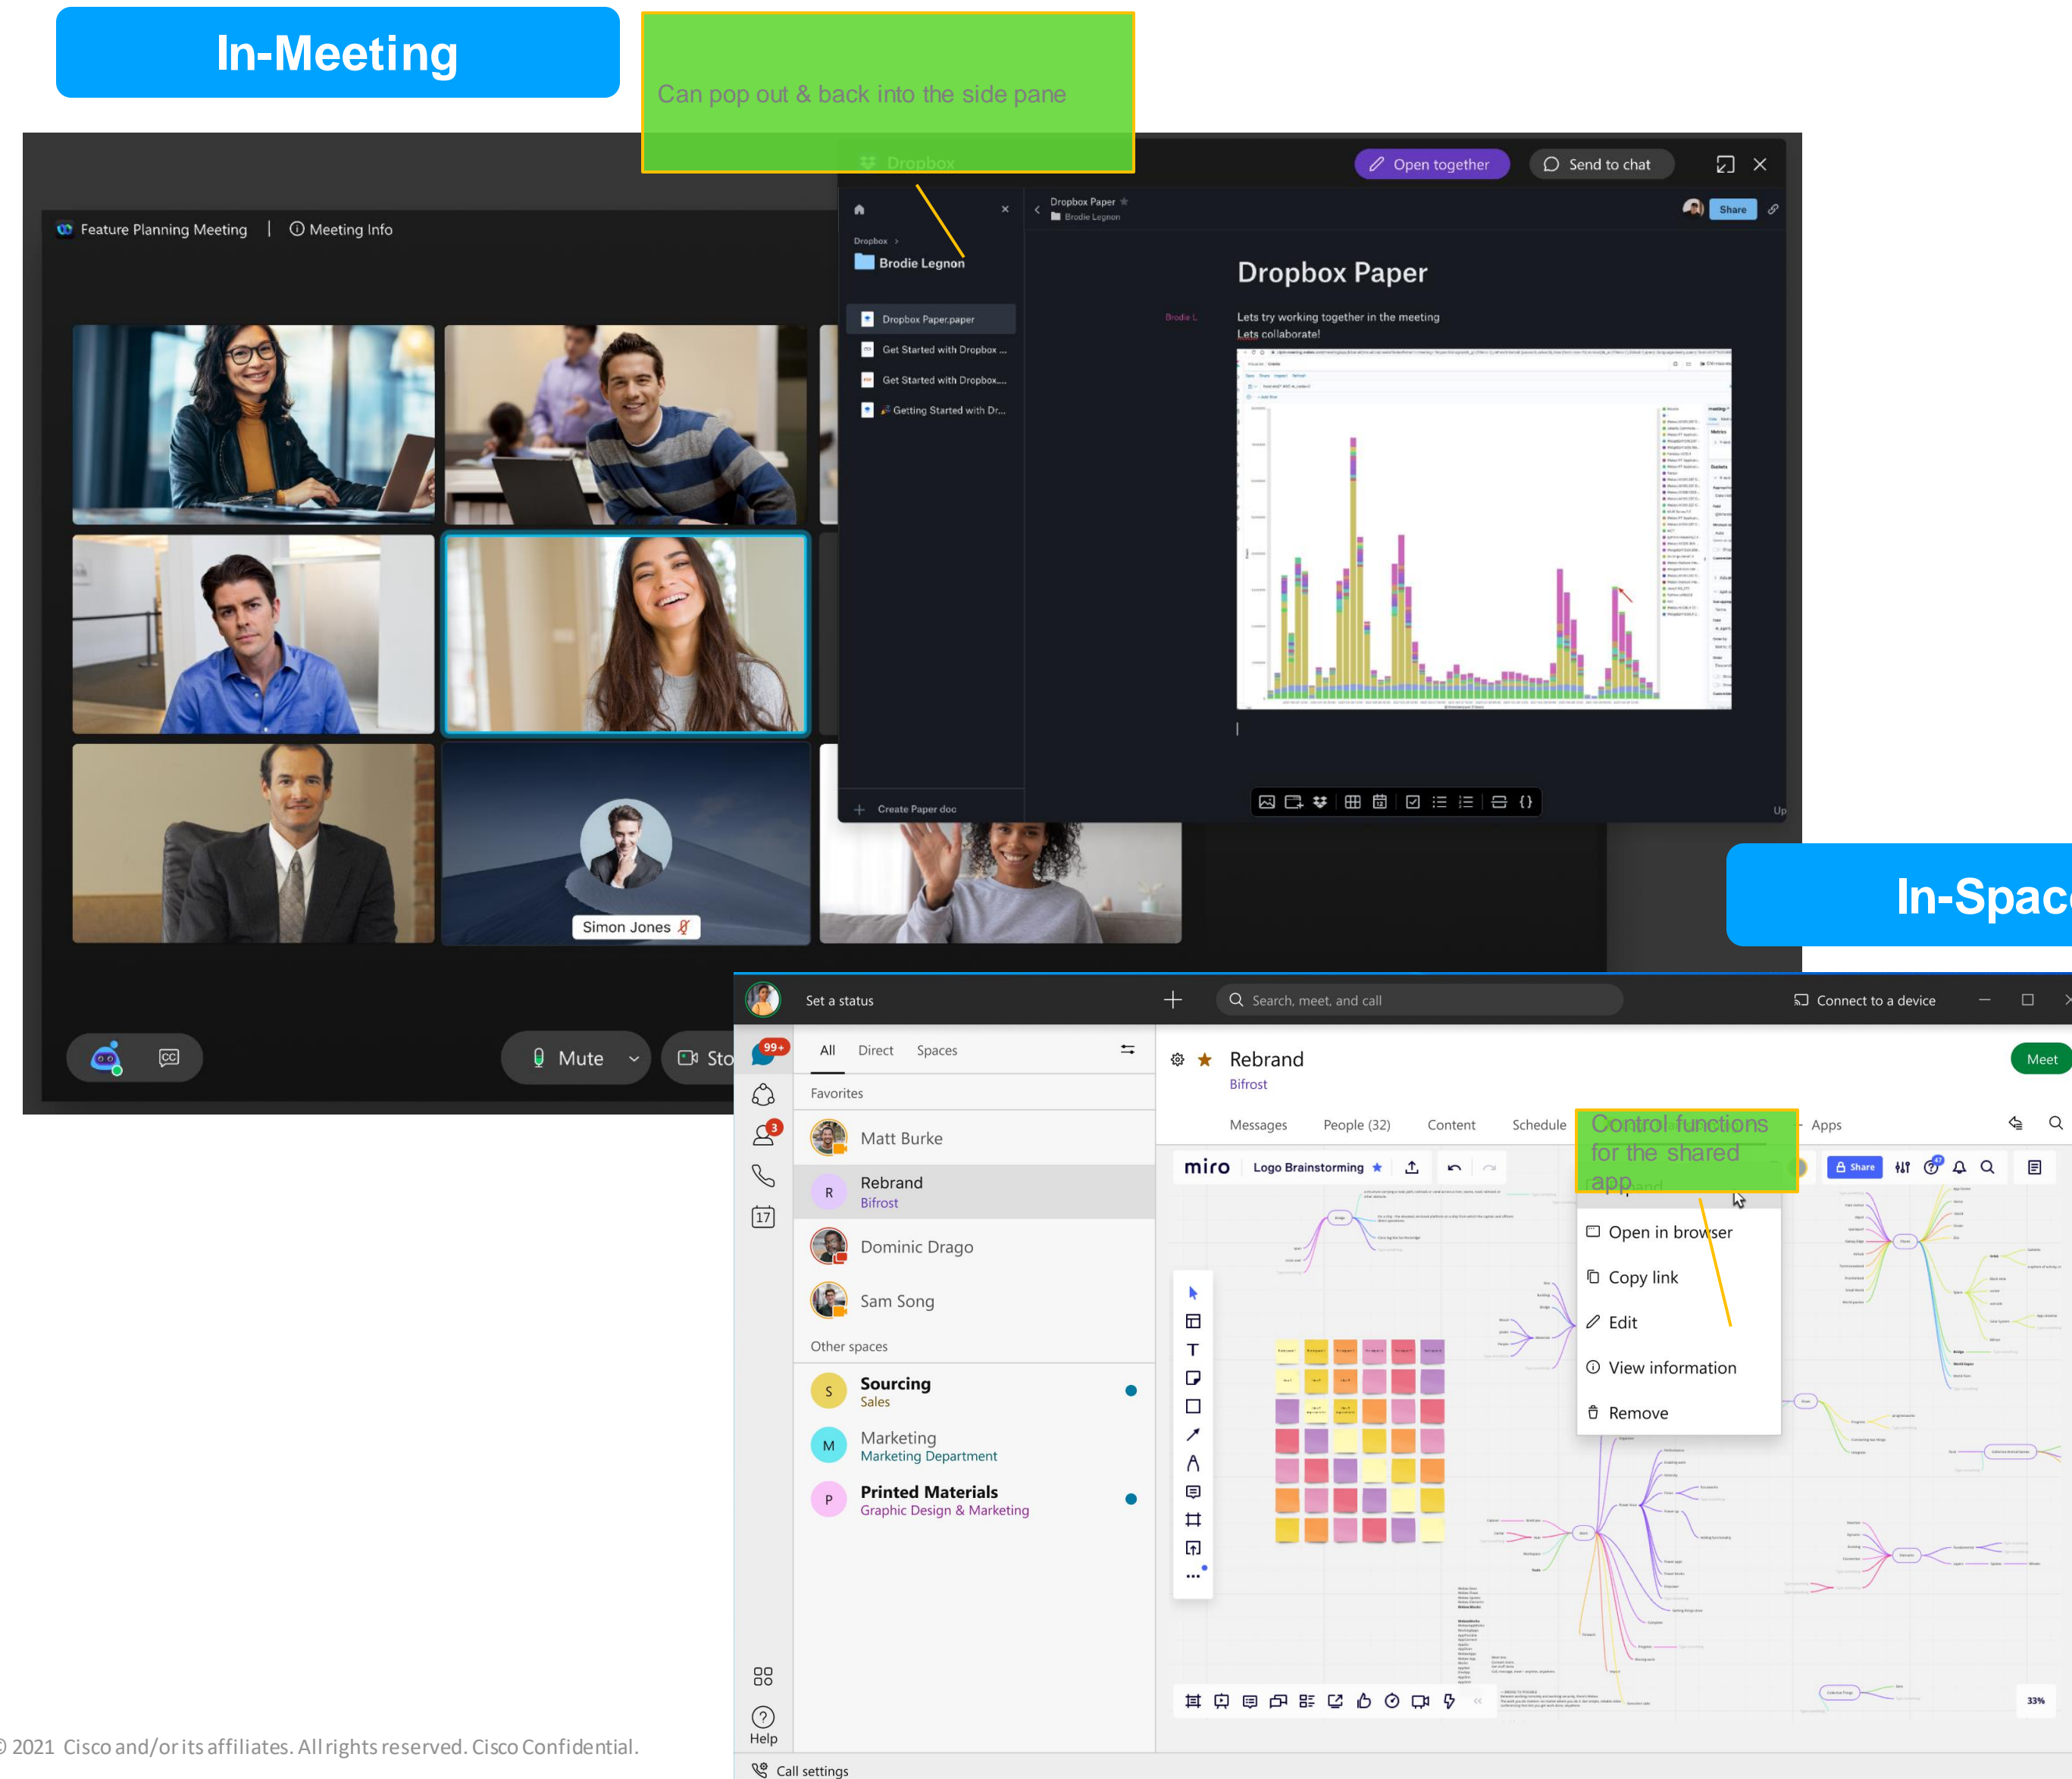

## How to Enable

Admins need to login to Control Hub -> Messaging -> Content Management Settings

# Webex + Visual Collaboration

# Embedded Apps

13

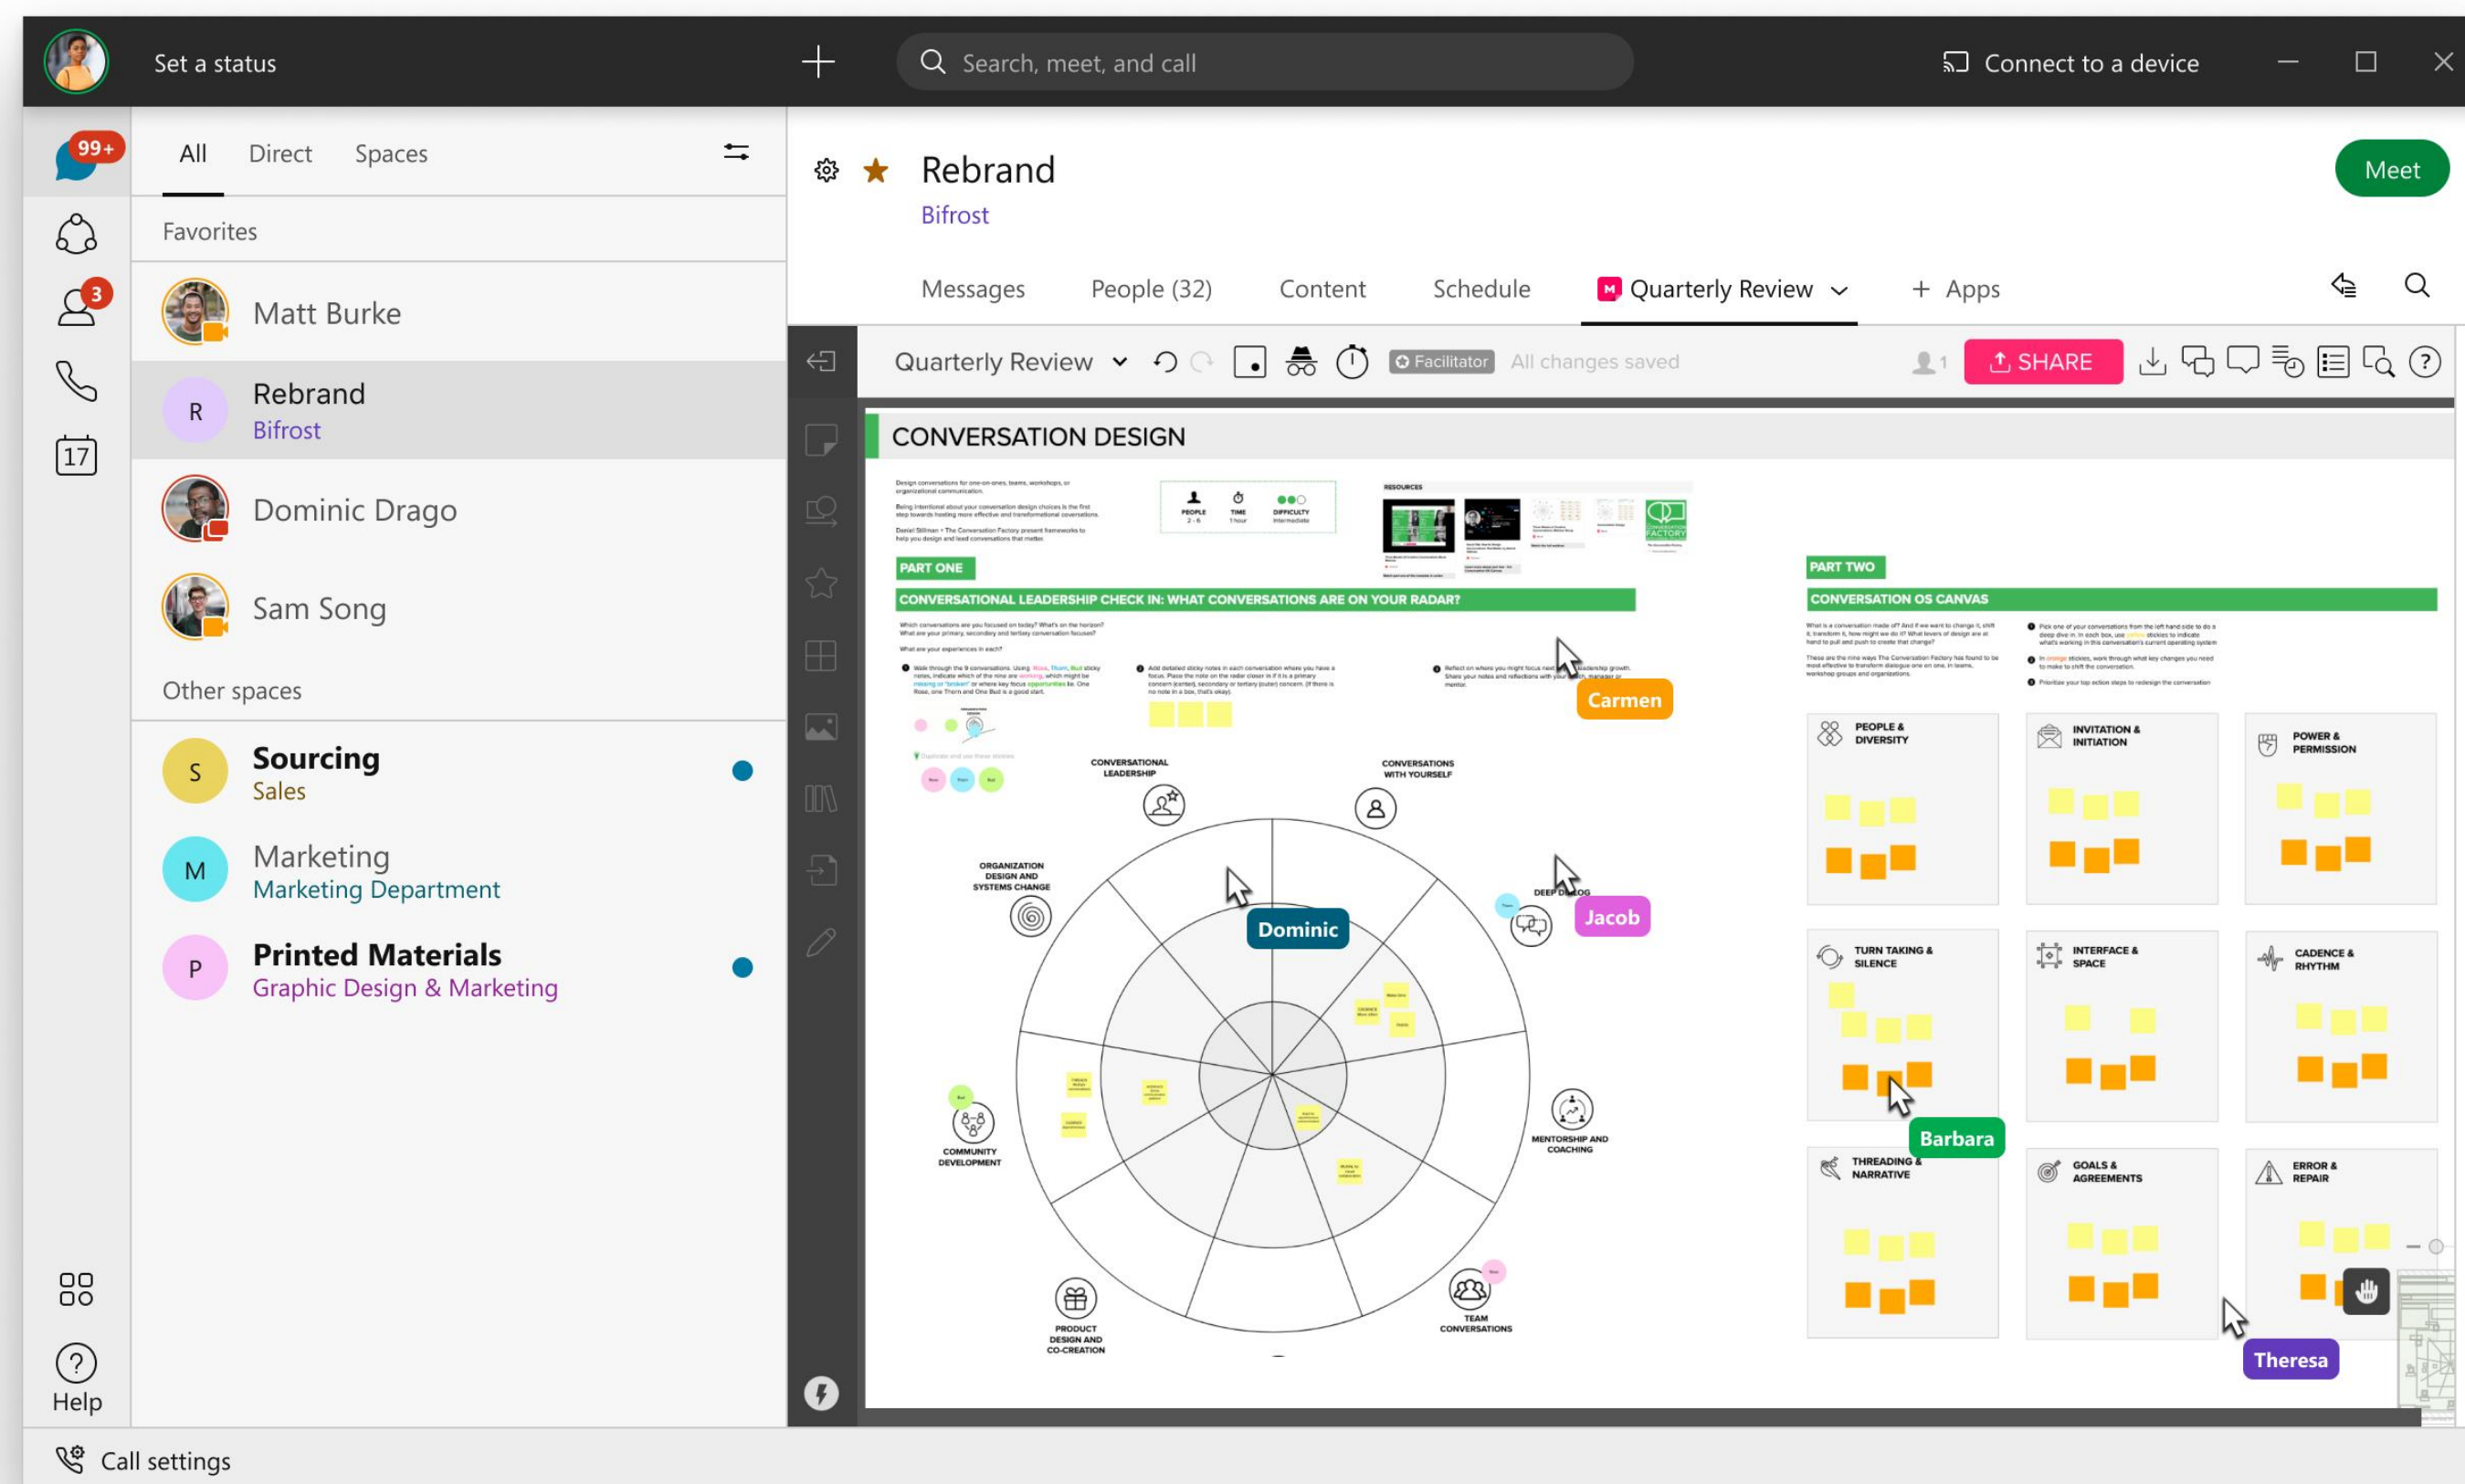

## Value Prop

- Focused - minimize app context switches
- Customized - embedded apps enable collaboration workflow

## Availability:

- In-space and In-meetings
- Left pane-Coming soon

# Mural and Miro as Embedded Apps

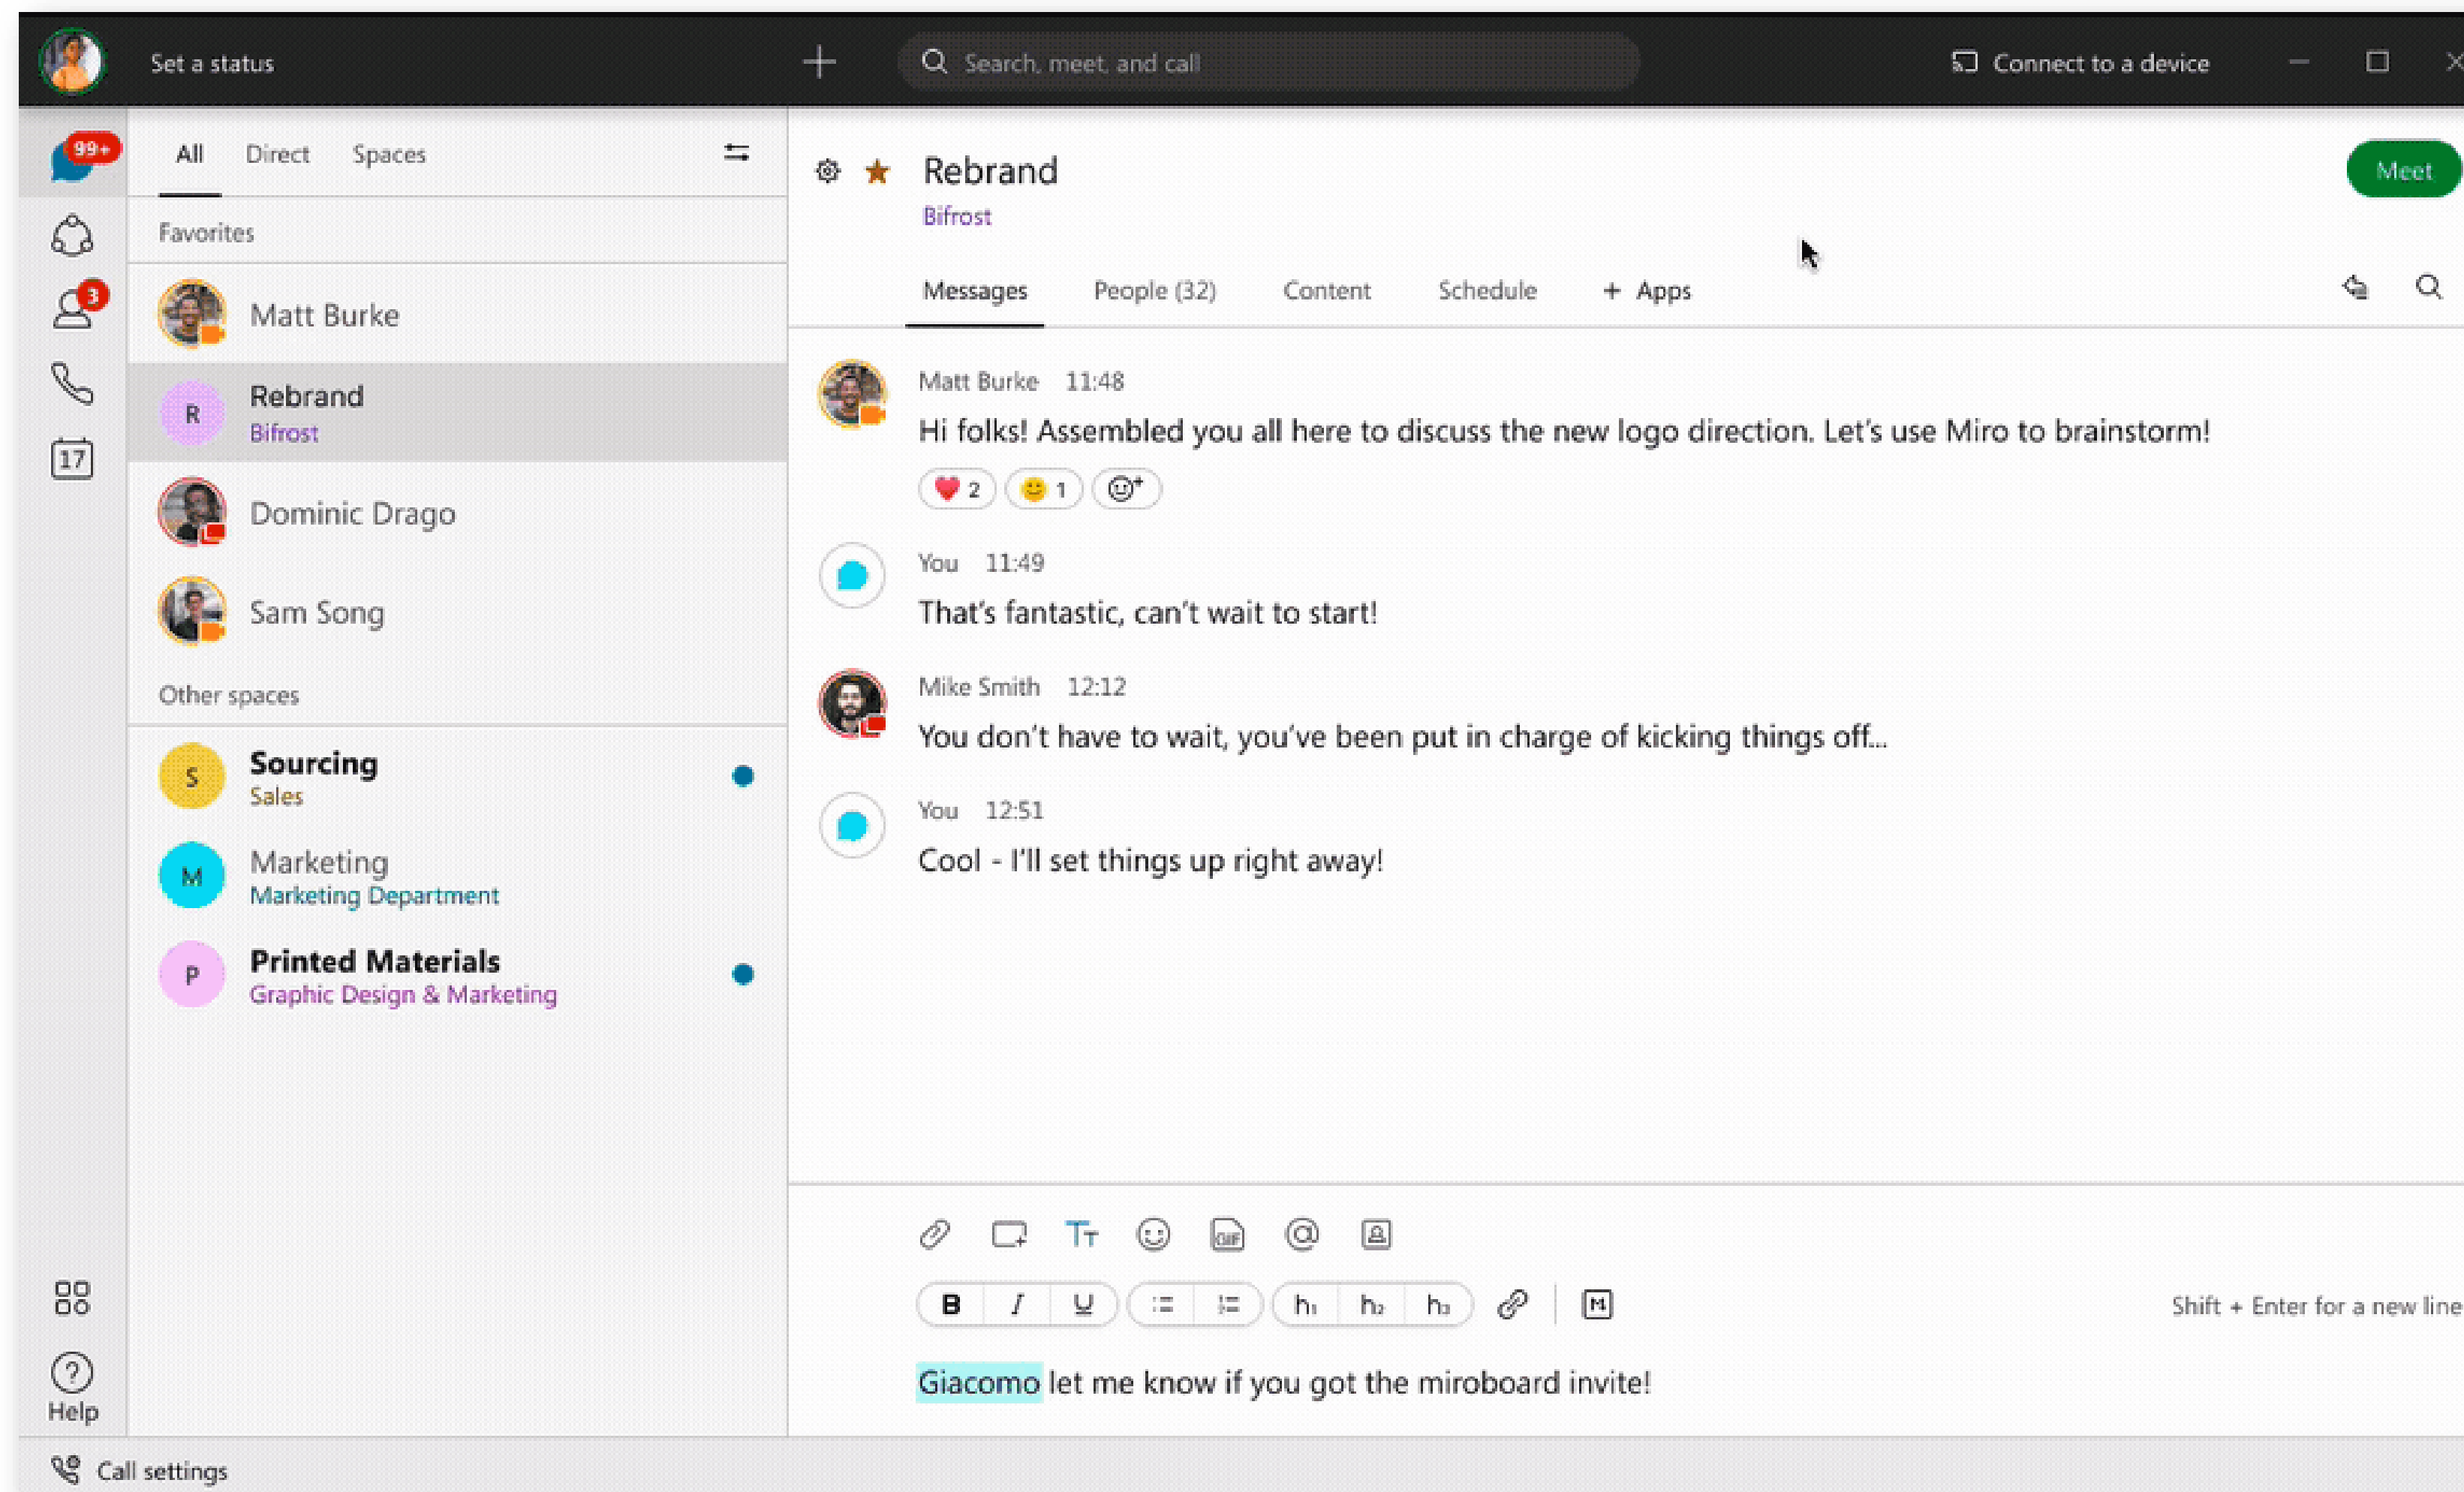

## Value Prop

- Extend creative collaboration beyond the boundaries of a meeting or in person session
- Co-create on the same canvas from multiple entry points
- Quick access to collaboration visual content right from within a space

**How to Enable**  
All customers are enabled by default if they have CH->Apps->Tabs enabled
