Overview

Cisco WebEx Telepresence is a cost-effective, easy-to-use, subscription-based service that provides high-definition video and voice communications across the Internet, making video collaboration both affordable and accessible. WebEx Telepresence enhances communications within your organization and across company boundaries by enabling connection to other WebEx Telepresence users, compatible H.323/SIP-based video devices, and Public Switched Telephone Network (PSTN) landline and mobile phone users.

With its low monthly subscription cost, usability features, and expert technical support, WebEx Telepresence is the ideal solution to help enable businesses to take advantage of the benefits of visual collaboration.

Supported devices

You can use the following Cisco devices with a WebEx Telepresence subscription:

- Cisco IP Video Phone E20
- Cisco TelePresence Quick Set SX20
- Cisco TelePresence System Quick Set C20
- Cisco TelePresence System Codec C40, C60, and C90
- Cisco TelePresence System Profile 42-inch, 52-inch, 55-inch, and 65-inch
- Cisco TelePresence System EX60 and EX90
- Cisco TelePresence System MX200 and MX300
- Cisco TelePresence VX Clinical Assistant
The Profile series 52-inch is no longer being offered for sale.

You can also use the Cisco Jabber Video service to make and receive WebEx Telepresence video and audio calls directly from your Windows or Mac computer.

For information on using Jabber Video, see the Jabber Video User Guide for Windows or Mac. This guide contains information on using the other devices listed here.

**Key terms**

**Video number/video address (assigned and custom)**

Every bridge and device (whether assigned to a room or a user) in your WebEx Telepresence subscription is automatically assigned a video number. A video number is a 10-digit number in the format 1234567890. You use the video number in the following circumstances:

- **Device activation.** When you activate a WebEx Telepresence device, you enter the video number and an activation code.

- **Inbound audio-only calls.** Every WebEx Telepresence subscription includes the ability to receive inbound audio calls from landline or mobile phones, as well as other video devices that have outbound audio calling enabled. These phones and devices dial a device’s 10-digit video number to call it.

- **Outbound audio-only calls.** If your WebEx Telepresence subscription includes the optional VoIP out feature, you can make outbound audio calls to other devices by dialing that device’s 10-digit video number.

- **If your subscription includes the VoIP out feature, you can also make audio calls to VoIP landline and mobile phones by dialing a 10-digit phone number from your device.**

For WebEx Telepresence Premium subscriptions, each device also receives an assigned video address. You dial a video address to make a video call to another device or to join a bridge. The assigned video address format for a device is the 10-digit video number followed by @webex.com: [video number]@webex.com. For example, if the device’s video number is 1234567890, the assigned video address is 1234567890@webex.com.

You cannot change a device’s assigned video address. However, for any device, you can create a custom video address in the format [display name]@webex.com, where [display name] is any name you choose that is not already in use. A custom video address lets you create a way to make a video call that is easier to dial and/or remember than the assigned video address.

Unlike devices, personal bridges and WebEx Telepresence bridges use a single video address only. Although this video address is assigned, it is not based on the video number.

**Cisco WebEx Telepresence bridge/personal bridge**

As part of your WebEx Telepresence subscription, each user receives a unique personal bridge. This feature enables users to set up a bridge that other WebEx Telepresence devices and Jabber Video users can join for a conference call. See Use your personal bridge for information.

Your company can also purchase a separate, optional WebEx Telepresence bridge subscription that enables conference participation with both other WebEx Telepresence devices and Jabber Video users, as well as all standards-based SIP or H.323 video devices and standard PSTN landline or mobile telephones (for audio
only). See the Cisco WebEx Telepresence bridge Quick Reference Guide for information.
Activate your device

Before you begin

- Make sure you have your video number and activation code. These were included in the Cisco WebEx Telepresence subscription information you received from orders@telepresence.webex.com.

- Make sure that the device has an Internet IP connection, and that Domain Name System (DNS) services are available.

- Check the software version for your device:
  - Cisco IP Video Phone E20: Press Home > navigate to the Menu tab > System information.
  - Cisco TelePresence System Codec C series and SX series devices with Cisco TelePresence Touch: Tap More > Settings > System Information.
  - Cisco TelePresence System Codec C series, SX series, and VX series devices with TRC5 remote: Press Home > Settings > System Information.
  - Cisco TelePresence System EX60, EX90, MX200, and MX300: Tap More > Settings > System Information.

Currently, the minimum required software version for the E20 is TE4.1.1. For all other devices, the minimum required software version is TC5.1.0.

If the software version is current, continue with the following procedure. If the version is not current, see Upgrade your device software for instructions.
Then follow the activation steps for your device:

- Cisco IP Video Phone E20
- C series and SX series devices with Cisco TelePresence Touch
- C series, SX series, and VX series device with the TRC5 remote
- Cisco TelePresence System EX60, EX90, MX200, and MX300

During activation, your device screen displays the term Cisco TelePresence Callway. This is the former name of the WebEx Telepresence service.

Cisco IP Video Phone E20

1. Press Home, and then press ▶ or ◄ to highlight the Menu tab.
2. Press ◀ or ▶ to scroll to and highlight Startup wizard. Press ✓.
3. Press ◀ or ▶ to highlight the Video Infrastructure field.
5. Use the keyboard to enter the subscription video number and activation code in the appropriate fields.
6. Highlight Continue and press ✓.

C series and SX series devices with Cisco TelePresence Touch

1. Tap More and navigate to Settings > Administrator Settings > Network Settings > Provisioning.
2. Tap Start and select Cisco TelePresence Callway.
3. Enter the subscription video number and activation code in the appropriate fields.
4. Tap Register, and then tap OK.

C series, SX series, and VX series device with the TRC5 remote
1. Press \( \hat{m} \), and then press \( \uparrow \) or \( \downarrow \) to highlight Settings. Press \( \sqrt{\} \).

2. Press \( \uparrow \) or \( \downarrow \) to highlight Administrator settings, and then press \( \sqrt{\} \).

3. Press \( \uparrow \) or \( \downarrow \) to highlight Advanced configuration, and then press \( \sqrt{\} \).

4. Press \( \uparrow \) or \( \downarrow \) to highlight Provisioning, and then press \( \sqrt{\} \).

5. Press \( \uparrow \) or \( \downarrow \) to highlight Mode, and then press \( \sqrt{\} \).

6. Press \( \uparrow \) or \( \downarrow \) to highlight Callway, and then press \( \sqrt{\} \).

7. Enter the subscription video number and activation code in the appropriate fields.

8. Select Continue.

9. Highlight Finish and press \( \sqrt{\} \).

Make a test video call

1. Tap More and navigate to Settings > Administrator Settings > Network Settings > Provisioning.

2. Tap Start and select Cisco TelePresence Callway.

3. Enter the subscription video number and activation code in the appropriate fields.

4. Tap Register, and then tap OK.

Cisco TelePresence System EX60, EX90, MX200, and MX300

- To verify two-way audio and video connectivity, dial test@webex.com. This connects you to a mirroring service that lets you see video and hear audio of yourself with a three-second delay.
Video and audio calls

Make a video call to a contact

Cisco IP Video Phone E20
1. Press Home, and then press ▶ or ◀ to highlight the Directory menu.
2. Press ▲ or ▼ to scroll to and highlight the contact, and then press √.
3. Press √ again to dial.

Cisco TelePresence Quick Set SX20, Quick Set C20, Codec C40, Codec C60, Codec C90, VX Clinical Assistant, and Profile Series using Codec C Series touchscreen
1. Tap Contacts.
2. Tap Directory or Favorites.
3. Scroll to the contact and tap the contact name.
4. Tap Call to dial.

Cisco TelePresence System EX60, EX90, MX200, and MX300
1. Tap Contacts.
2. Tap Directory or Favorites.
3. Press ▼.
2. Scroll to and highlight the contact you want, and then press √.
3. Press √ again to dial.
3. Scroll to the contact and tap the contact name.
4. Tap Call to dial.

Make a video or audio call to a video address or number

Follow the procedures below to make a video or audio call to a Cisco WebEx Telepresence device, a standards-based SIP or H.323 video device, or PSTN landline or mobile phone by dialing a video address, video number, or 10-digit phone number.

⚠ To make an audio call to a landline or mobile phone, your WebEx Telepresence subscription must include the optional VoIP out feature.

For instructions on making a call to a contact from your contact list, see Make a video call to a contact.

---

Cisco IP Video Phone E20

1. Press Home.
2. In the Search or Dial field, enter one of the following:
   - To make a video call to another WebEx Telepresence device: Enter the 10-digit video number or the video address. For the video address, you do not need to include “@webex.com” or “@jabber.com.”
   - To make a video call to a SIP or H.323 video device: Enter the full video address, including “@company.com.”
   - To make an audio call to a landline or mobile phone: Enter the 10-digit phone number. You do not need to enter 1.
3. Press ▼ to highlight the number or address you just entered.
4. Press √ to select the highlighted entry, and press √ again to dial.
Cisco TelePresence Quick Set SX20, Quick Set C20, Codec C40, Codec C60, Codec C90, and Profile Series using the Codec C Series touchscreen

1. Tap **Call**.

2. In the **Search or Dial** field, enter one of the following:
   - To make a video call to another WebEx Telepresence device: Enter the 10-digit video number or the video address. For the video address, you do not need to include “@webex.com” or “@jabber.com.”
   - To make a video call to a SIP or H.323 video device: Enter the full video address, including “@company.com.”
   - To make an audio call to a landline or mobile phone: Enter the 10-digit phone number. You do not need to enter 1.

3. Tap **Call**.

Assistant, and Profile Series using Codec C Series TRC5 remote

1. Press  Home, and then select the **Turn keyboard on** softkey by pressing the second function button from the left.

2. Press  arrow to highlight the **Enter contact** field.

3. In the **Enter contact** field, enter one of the following. To enter characters, press  arrow, or  arrow to move the highlight on the keyboard, and then press  select to select the highlighted character.
   - To make a video call to another WebEx Telepresence device: Enter the 10-digit video number or the video address. For the video address, you do not need to include “@webex.com” or “@jabber.com.”
   - To make a video call to a SIP or H.323 video device: Enter the full video address, including “@company.com.”
   - To make an audio call to a landline or mobile phone: Enter the 10-digit phone number. You do not need to enter 1.
4. After you have completed entering all the characters, press √ to select the entry, and then press √ or ✉ to dial.

Cisco TelePresence System EX60, EX90, MX200, and MX300

1. Tap Call.
2. In the Search or Dial field, enter one of the following:
   - To make a video call to another WebEx Telepresence device: Enter the 10-digit video number or the video address. For the video address, you do not need to include “@webex.com” or “@jabber.com.”
   - To make a video call to a SIP or H.323 video device: Enter the full video address, including “@company.com.”
   - To make an audio call to a landline or mobile phone: Enter the 10-digit phone number. You do not need to enter 1.
3. Tap Call.

For information on tasks you can complete while on a call, such as muting the microphone or turning the camera on or off, see Other tasks available for your device and look for the section about your device.

Use your personal bridge

Your WebEx Telepresence subscription includes the personal bridge feature, which enables you to set up a bridge that other WebEx Telepresence users can join for a conference call. Note the following regarding the personal bridge feature:

- You can use your personal bridge to set up a conference with other WebEx Telepresence devices and Cisco Jabber Video users only. Other standards-based SIP or H.323 devices, as well as landline and mobile phones, cannot join a personal bridge conference.
If your company purchases an optional WebEx Telepresence bridge subscription, you can use a WebEx Telepresence bridge to set up a conference with standards-based SIP and H.323 devices and landline and mobile phones, as well as other WebEx Telepresence devices and Jabber Video users. See the Cisco WebEx Telepresence bridge Quick Reference Guide for information.

- For Jabber Video subscriptions, a personal bridge conference can include up to 6 participants. For WebEx Telepresence Premium subscriptions, a personal bridge conference can include up to 9 participants. This number includes the host.

- Each device is assigned a unique personal bridge address in the format [display name].mybridge@webex.com, which appears as the first entry (My bridge: XXX) in the device’s contact list. To start the conference, the host dials his or her own personal bridge address.

- Each other party must dial the host’s personal bridge address to join the conference.

- If the host leaves the conference, the call continues, but other users cannot join the call unless the host rejoins.

1. If you are the host, create and send an invitation to the devices you want to join the conference. Be sure to include your personal bridge address.

2. To start the conference, the host selects the My bridge: XXX entry from his or her device contact list.

3. After the host has started the conference, other WebEx Telepresence and Jabber Video users can join the conference by dialing the host’s personal bridge address.

4. If other users attempt to join the conference before the host has started it, these users hear a message that they cannot join the bridge without the host present, and the call disconnects.

Use the IP Dialing IVR

WebEx Telepresence is based on the SIP signaling protocol and uses Uniform Resource Identifier (URI)-style addressing for video calls. When a WebEx Telepresence device initiates a video call to another device, it addresses the second device with a unique identifier in the form [display name]@domain.com.

Some video devices do not use the SIP signaling protocol, however, and others do not use URI addressing. One class of such video devices uses the H.323 signaling protocol and can be identified by a unique IP address in the form A.B.C.D.

The IP Dialing Interactive Voice Response (IVR) tool allows you to call an H.323 video device by IP address.

1. Dial ip to connect to the IP Dialing IVR.

2. Follow the audio and text prompts.

3. Select 1 to begin the IP dialing process.

4. Enter the IP address. Enter the * character in place of a period; for example, for the IP address 203.174.20.80, enter 203*174*20*80.

If you enter the IP address incorrectly, you need to start the dialing process over at step 1. You can’t fix errors in the IP address.
5. When you finish entering the IP address, select #.
6. Select # again to dial.

</tr>
</tbody>
</table>

**i** You must be able to reach the device from the Internet.
## Calling scenario

### Make a video call to a standards-based H.323-complaint device using an IP address

1. **Dial ip.**
2. Follow the IVR prompts (select option 1 for IP dialing).
3. Enter the IP address (using * for periods) and press #.
4. Press # again to dial.

You must be able to reach the H.323 device from the Internet.

---

**Tip:** WebEx Telepresence devices cannot be uniquely identified by an IP address. You need to use a video address to call a WebEx Telepresence device.

### Call a North America-based landline or mobile phone number

1. **E20:** Home > Search or Dial > enter the 10-digit number > ▼ to highlight the number > ✔ to select the number > ✔ to dial.

**Touchscreen:** Call > Search or Dial > enter the 10-digit number > Call.

**Remote:** 🏠 > Turn keyboard on > navigate to the Enter contact field > enter the 10-digit number > ✔ to select the number > ✔ to dial.

---

**Tip:** You do not need to prefix the number with a 1.

### Call the 911 emergency number

WebEx Telepresence does not support 911 emergency calling.

### Call a special phone number (premium services, collect calls, operator service)

WebEx Telepresence does not support special phone numbers, such as operator service calls, 411 (directory service) calls, 9xx (premium service) calls, or collect calls.

### Call an international number

WebEx Telepresence does not support outbound international calls. Only US and Canada landline or mobile numbers are supported at this time.

However, if you purchased an international calling card service from another service provider, you can dial its toll-free phone number from your WebEx Telepresence device. Follow the instructions provided by your international service provider to make a call once you are on the IVR.
### Calling scenario
Join a Cisco WebEx Telepresence bridge for your company

Dial the pre-assigned custom WebEx Telepresence bridge video address (for example, `companyx.bridge@webex.com`). See the [Cisco WebEx Telepresence bridge Quick Reference Guide](#) for information.

### Calling scenario
Call in to a Cisco WebEx conference

There is currently no interworking between WebEx Telepresence and Cisco WebEx. Therefore, if a WebEx Telepresence device calls in to a Cisco WebEx conference, other users can hear the WebEx Telepresence participant as audio-only; they cannot see video.

### Calling scenario
Tasks to complete the call

**Call into a multi-party video call using multiway**

WebEx Telepresence does not currently support the multiway feature for multiparty video. Instead, the following options are available for multiparty video calls:

- Each WebEx Telepresence subscription includes the personal bridge feature, which allows up to 6 or 9 participants (including the host) to join in a conference (see [Use your personal bridge](#)).

- If your company purchases an optional WebEx Telepresence bridge subscription, up to 6 or 12 participants can join in a conference. See the [Cisco WebEx Telepresence bridge Quick Reference Guide](#) for information.

- The Cisco TelePresence System Codec C40, Codec C 60, Codec C90, Profile Series, and Cisco TelePresence System EX90 devices have the capability to use the optional MultiSite feature to host multiparty video calls on the device itself.

Contacts

With its support for placing and receiving video calls to and from standards-based H.323 and SIP video devices, or incoming audio calls from PSTN landline or mobile phones, Cisco WebEx Telepresence allows you to expand your personal network of video contacts.

For instructions on making a video call to a contact, see Make a video call to a contact.

Find a contact

1. On your device, open the directory or phone book.
2. In the Enter contact or Search or Dial field, begin entering the name of the entry.
3. When the entry appears in the search results, select it.

Add a contact

Cisco IP Video Phone E20

1. Press Home, and then press ▶️ or ◀️ to highlight the Directory menu.
2. Press ◀️ to highlight Add new contact, and then press ✓.
3. Enter the name and the video number or video address in the appropriate fields.
4. (Optional) To add the new contact to the Favorites list, make sure Favorite is set to Yes.
5. Highlight Save and press ✓.
Cisco TelePresence Quick Set SX20, Quick Set C20, Codec C40, Codec C60, Codec C90, and Profile Series using Codec C Series touchscreen

You cannot add a contact directly to any device using the touchscreen. You can, however, assign a directory or call history entry as a favorite.

1. Tap Contacts.
2. Tap Directory or History.
3. Scroll to the contact and tap the contact name.
4. Tap Add to favorites.
5. Edit the entry as needed and tap Save.

You can also add a contact to My contacts from your call history list or your phone book.

1. Press ☐ or Call history.
2. Press ▼ to highlight the entry you want, and then press ✓.
3. Press ▼ to highlight Save to my contacts, and then press ✓.
4. The contact appears with the name and video address already entered. Edit either or both if needed.
5. Highlight Save and press ✓.

Cisco TelePresence System EX60, EX90, MX200, and MX300

You cannot add a contact directly to an EX60, EX90, MX200, or MX300. You can, however, assign a directory or call history entry as a favorite.

1. Tap Contacts.
2. Tap Directory or History.
3. Scroll to the contact and tap the contact name.
4. Tap Add to favorites.
5. Edit the entry as needed and tap Save.

Cisco TelePresence Quick Set SX20, Quick Set C20, Codec C40, Codec C60, Codec C90, VX Clinical Assistant, and Profile Series using Codec C Series TRC5 remote

You can use the remote to add a contact to My contacts.

1. Press ☐, and then press ✓ to display My contacts.
2. Press ▼ to highlight Add new contact, and then press ✓.
3. In the Name field, enter a name for the contact.
4. In the Number/URI field, enter either of the following:
   - The assigned video address in the format [video number]@webex.com.
   - The custom video address (if the WebEx Telepresence user created one) in the format [display name]@webex.com.
5. Highlight Save and press ✓.

</table>
For most customers, the steps described in the Setup chapter provide all the information you need to activate your Cisco WebEx Telepresence service. However, in some rare situations you may need to upgrade your device software before you can activate your WebEx Telepresence service. This chapter describes that process.

This chapter also describes troubleshooting steps, including performing a factory reset and running the Line Quality Test tool, that you can try if your WebEx Telepresence service does not work properly after activation.

Upgrade your device software

Before you begin

- Make sure you have your WebEx Telepresence device video number and activation code.

- Depending on your IP address type (DHCP or static) implementation and your service activation method, you may also need a terminal client that supports Secure Shell (SSH2) connectivity. Windows users can download a client such as PuTTY (available from chiark.greenend.org.uk/~sgtatham/putty). Mac users can use the default terminal emulator included on their computer.

Download and install the software

1. Turn on your device and connect it to the network.

2. Do one of the following:

   - If your device uses DHCP (that is, if it obtains an IP address automatically), the device obtains an IP address.

   - If your device requires a static IP address, navigate to the settings and enter the appropriate IP address, subnet mask, default gateway, and DNS server. The settings menu varies according to the device.

   - Be sure to write down the IP address of the device.
3. If your device uses DHCP, locate the IP address for your device by doing one of the following:
   - Cisco IP Video Phone E20: Press Home > navigate to the Menu tab > System Information.
   - Cisco TelePresence System Codec C series and SX series devices with Cisco TelePresence Touch: Tap More > Settings > System Information.
   - Cisco TelePresence System Codec C series, SX series, and VX series devices with TRC5 remote: Press Home > Settings > System Information.
   - Cisco TelePresence System EX60, EX90, MX200, and MX300: Tap More > Settings > System Information.

4. From a computer on the same network as your device, open a web browser and enter http://[device IP address]. This opens a web page displaying information about your software version.

5. If you are prompted for a username, enter admin.

6. By default, the password is blank. If you created a password, enter it.

7. Make a note of the currently installed software version.

8. If your device software does not meet the minimum required version, or if you need to change the installed software version for any reason, go to http://www.cisco.com/cisco/software/navigator.html?mdfid=280789323&flowid=22081.

9. Click your device at the top of the screen.

   For the Cisco TelePresence System EX60, click the EX90 entry.

10. Click Download and follow the onscreen instructions.

11. On your device system information page, click Upgrade Software.

12. Click Browse and navigate to the folder where you downloaded the software.

13. Highlight the software file and click Install Software or Upgrade.

   Please wait while the device restarts. This may take up to 5 minutes.

### Perform a factory reset

If the WebEx Telepresence service does not work as expected after activation, you can perform a factory reset on your device, as described in the appropriate section:

- Perform a factory reset: Cisco IP Video Phone E20
- Perform a factory reset: Cisco TelePresence System Codec C series, SX series, and VX series devices
- Perform a factory reset: Cisco TelePresence System EX60, EX90, MX200, and MX300

### Perform a factory reset: Cisco IP Video Phone E20

You can perform a factory reset directly from your device:

1. Navigate to the Home menu.
2. Press **, press Presentation, and then press ##.

You can also perform a factory reset using your ssh-capable terminal client:

1. Using ssh, log in to your device as admin.
2. By default, the password is blank. If you created a password, enter it.

3. Enter `xCommand SystemUnit Configuration ResetToFactoryDefaults Settings: All`.

Perform a factory reset: Cisco TelePresence System Codec C series, SX series, and VX series devices

You can perform a factory reset using your ssh-capable terminal client:

1. Using ssh, log in to your device as `admin`.
2. By default, the password is blank. If you created a password, enter it.
3. Enter `xCommand SystemUnit FactoryReset Confirm: Yes`.

For the Quick Set C20 device, you can perform the factory reset directly from the device:

1. Turn off the device.
2. Press and hold the **power** button on the back of the device until the power indicator turns red.
3. Release the **power** button, and then press it twice within five seconds.

Perform a factory reset: Cisco TelePresence System EX60, EX90, MX200, and MX300

You can perform a factory reset using your ssh-capable terminal client:

1. Using ssh, log in to your device as `admin`.

Use the Cisco WebEx Telepresence Line Quality Test Tool

If the WebEx Telepresence service does not work as expected after activation, you can run the Line Quality Test Tool: The tool verifies that your Internet connection supports the WebEx Telepresence service.

Before you begin

Make sure that your web browser is Java-enabled and has Java Runtime Environment (JRE) 1.5 or above installed. To run the Line Quality Test tool using Internet Explorer (IE) on a 64-bit Windows machine, make sure that you select the 32-bit version of IE and 32-bit Java Runtime Environment. On a typical Windows 7 64-bit machine, IE displays two entries in the Start menu. Select **Internet Explorer**, not **Internet Explorer (64-bit)**.

Run the tool

   - The first time that you run this tool, you may see a popup message that prompts you to run the application. Click **Run** to enable the Cisco-provided Java applet to run on your PC.

2. Click **Start**. The tool performs a series of tests to determine available bandwidth, ability to connect to the WebEx Telepresence data center, and firewall compatibility, and conducts a test simulation.
To run more comprehensive tests, click Additional options and check the Run comprehensive tests box.

3. The tool displays each step of the test and shows green checkmarks to indicate successful tests. To see detailed test progress information, click Show details.

For tests that are not successful, the tool displays the issues that were discovered and actions to take to resolve these issues. After you take action to resolve the issues, run the tool again.

4. After the test has completed, the tool displays the results, including the expected video quality. If the tool finds issues related to the network connection, it displays a notification that you can click to get additional details.

5. (Optional) Do one of the following:
   - To run the test using an alternate data center, or to run a comprehensive test, click Run again.
   - To provide more information and submit the results for support review, click Submit additional information. Enter the required information, including your name, contact phone number, contact email, and company name, and then click Send.

If you need to contact support, please include the reference number shown in the lower-left corner of the screen (for example, Test reference: XHK8QI).
Additional Resources/Support

Additional resources about devices

For additional device resources, including User Guides and Administrator Guides, do the following:

1. Go to www.cisco.com and click Support.
2. In the Enter Product Name field, enter your device name and click Find.
3. In the search results list, click the link for your device.
4. A list of documents available for your device appears on the screen. Click the document you want.

Contacting Cisco WebEx Telepresence Support

Cisco WebEx Telepresence offers both web-based and phone support to help answer your questions or resolve an issue. You can access support resources in the following ways:

- Website: https://supportforums.cisco.com/community/netpro/small-business/webextelepresence
- Phone: 1-877-533-4246 (US toll-free)

You can also engage in interactive, ongoing discussions with the WebEx Telepresence experts, and obtain additional information about the WebEx Telepresence service, by visiting the WebEx Telepresence Support Community website at https://supportforums.cisco.com/community/netpro/small-business/webextelepresence.

With a Cisco.com user ID, you can post your own questions or respond to questions that other users have posted. For additional help, see our
library of documents that include answers to your most frequently asked questions and troubleshooting information. Come back often as we continue to update our library with the latest information.

Before you contact support, please make sure you have the following information:

**For all support requests**

- Subscription number
- Administrative contact name and email address
- Company name as registered with the WebEx Telepresence service

**For billing and account management requests**

- Company support passcode (required)
  - Never send your passcode in email.
- Company address as registered with the WebEx Telepresence service

**For issues with placing or receiving video or audio calls**

- Date and time of the video or audio call (if you cannot remember the exact date and time, please make a new call and make a note of this information)
- Calling number (specify whether it is on WebEx Telepresence)
- Called number (specify whether it is on WebEx Telepresence)
- Cisco WebEx Telepresence bridge number, if the issue is related to WebEx Telepresence bridge service
