Get VeraSMART Call Accounting Software for FREE
Available to Cisco Unified Communications 500 Series Customers

VeraSMART® gathers information from the Cisco® UC 500 Series platform and makes it available for comprehensive analysis, reporting, and integration with other enterprise data sources. VeraSMART provides hard data for making informed business decisions that can help businesses drive expense reduction and cost avoidance — resulting in an increase in bottom line performance.

VeraSMART analyzes telecom expenses, team productivity, as well as trunk and system utilization. This powerful reporting engine sifts through thousands, even millions, of call records with remarkable speed.

VeraSMART Call Accounting highlights:
- Powerful and flexible reporting engine
- Measure productivity and identify ways to decrease telecom expenses
- Boost revenues by ensuring trunking is optimized
- Tracks emergency calls and suspicious calling activity
- Isolates important telecom metrics in seconds
- 3D dashboards monitor key data trends
- Support for VMware® ESX Virtual Server
- Quickly export reports as HTML or ASCII delimited text for hassle-free use in applications such as Microsoft® Excel®
- Easy setup wizards and context-sensitive help
