

Cisco Support Community Expert Series Webcast:

Configure and Troubleshoot Wired and Wireless Networks Using Cisco Prime Infrastructure

Tejas Shah
Sr. Technical Consulting Engineer

April 2nd, 2013

Cisco Support Community – Expert Series Webcast

- Today's featured expert is Cisco Technical Marketing Engineer **Tejas Shah**
- Ask him questions now about *Cisco Prime Infrastructure*

Tejas Shah

Been in Network Management for over
10+ years at cisco

Topic: Configure and Troubleshoot Wired and Wireless Networks Using Cisco Prime Infrastructure

Event Date: April 2nd, 2013

Panel of Experts

Beecher Adams
Product Mgr

Mark King
Product Mgr.

Chris McGuyer
Business Development Mgr.

Thank You for Joining Us Today

Today's presentation will include audience polling questions

We encourage you to participate!

Thank You for Joining Us Today

If you would like a copy of the presentation slides, click the PDF link in the chat box on the right or go to

Or, <https://supportforums.cisco.com/docs/DOC-31564>

Thank You for Joining Us Today

Everyone who joins today's webcast will receive:

125 Cisco Preferred Access Points!

Polling Question 1

**How familiar are you with Prime Infrastructure?
(choose one)**

- a) I'm hearing about Prime Infrastructure for the first time**
- b) Somewhat Familiar**
- c) I have heard about it, but not evaluated it yet**
- d) I'm currently evaluating it in our test lab**
- e) I'm currently using it in our product infrastructure.**

Submit Your Questions Now!

Use the Q&A panel to submit your questions. Experts will start responding those

Cisco Support Community Expert Series Webcast:

Configure and Troubleshoot Wired and Wireless Networks Using Cisco Prime Infrastructure

Tejas Shah

Sr. Technical Marketing Engineer

April 2nd, 2013

Agenda

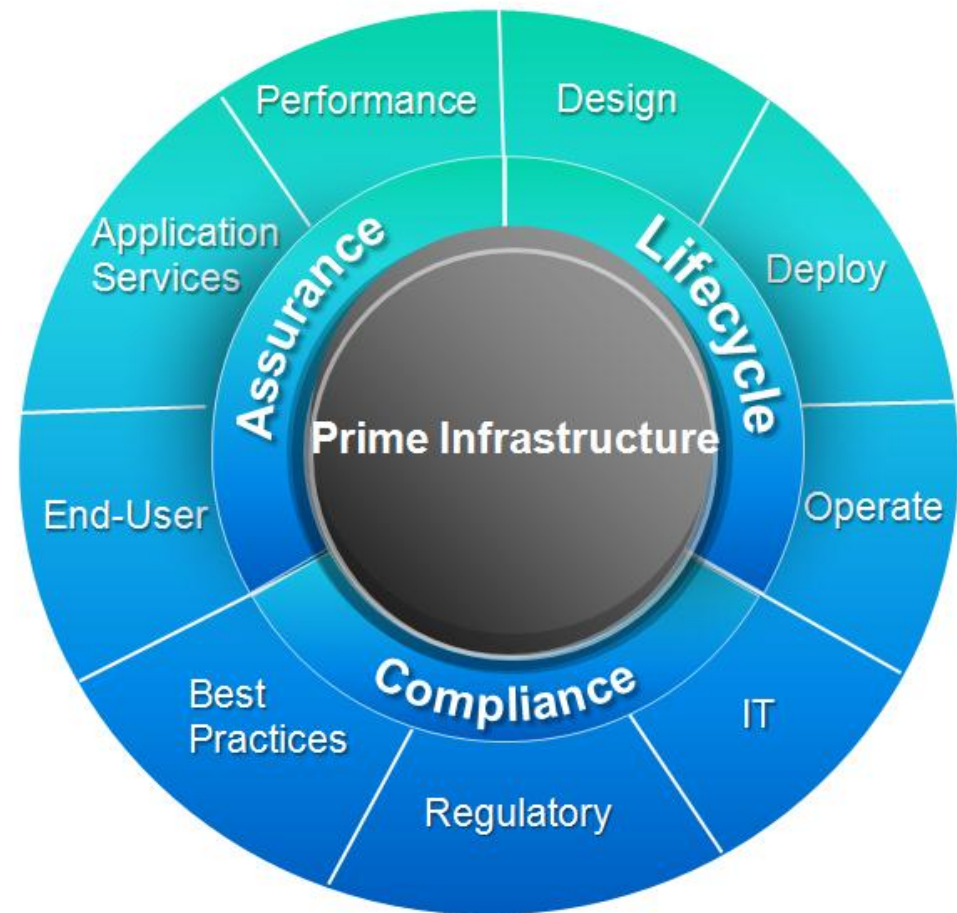

- **Overview of Prime Infrastructure**
- **Leveraging Prime Infrastructure for Designing and Deploying Configurations**
 - **Wired Devices**
 - **Wireless Devices**
- **Troubleshooting using Prime Infrastructure**
 - **Wired Infrastructure**
 - **Wireless Infrastructure**

Overview of Prime Infrastructure

Prime Infrastructure – Functional Overview

- ✓ A single integrated solution for comprehensive **lifecycle** management of wired/wireless access, campus, and branch networks
- ✓ Automates **compliance** with regulatory requirements, Cisco and IT best practices
- ✓ Utilizes rich performance data for end-to-end network visibility to **assure** application delivery and optimal end-user experience

Lifecycle Management for Wired/Wireless

- Lifecycle approach provides an easy and efficient way to manage a complex wired and/or wireless network by simplifying the day-to-day operational tasks associated with managing the network infrastructure for all Cisco devices including; routers, switches, wireless controllers, access points and more.
- Stages in this Life Cycle approach:
 - Design
 - Deploy
 - Operate
 - Report
 - Administration

Leveraging Prime Infrastructure for Designing and Deploying Configurations

Config Management - Overview

- Automated configuration archive
 - Backup all configurations out of the box
 - Backup vlan.dat which holds all the VLAN information on IOS devices
- Design configuration templates
 - For Wired as well as Wireless devices
 - Any type of templates from Simple configuration push to advanced dynamic decision making templates.
 - Uses standard Velocity Template Language (VTL)
- Design Day0/Day1 templates using intuitive wizards.
- Simple operational config changes using Device Work Center
- Deploy simple features or advance technology using out of the box templates within the product.

Configuration – Design & Deploy

```
snmp-server community public RO
snmp-server community private RW
snmp-server host 192.168.138.188
logging on
logging host 192.168.138.188
```

CLI Templates –
Simple, yet fully-customizable

	Name	Group
1	Configure De...	CLI Templates/Sys
2	Configure Log...	CLI Templates/Sys

Composite Templates –
Consolidate like CLI templates

Device Role

- Spoke
- Hub

Model based Templates –
Deploy Advanced Technology

- TrustSec Limited t
- TrustSec Capable l
- TrustSec Hardware
- TrustSec Software

Network Services –
Access Advance Feature readiness

Configuration – Day0 Provisioning

Workflows: Plug and Play Setup: Create Profile

Workflows ▾

Configuration Details **Factory Defaults**

Properties

▼ Credentials Show Clear Text

*SNMP Fields

Read-Only Community String	<input type="text" value="public"/>	Confirm	<input type="text" value="public"/>
Read-Write Community String	<input type="text" value="private"/>	Confirm	<input type="text" value="private"/>

All fields are required. These SNMP v2 community settings will be configured on the device and used by Prime Infrastructure for discovery purposes.

*SSH Credentials

Enable SSH Enable Telnet

User Name	<input type="text" value="cisco"/>	Confirm	<input type="text" value="cisco"/>
Password	<input type="text" value="cisco"/>	Confirm	<input type="text" value="cisco"/>
Enable Password	<input type="text" value="cisco"/>	Confirm	<input type="text" value="cisco"/>

All fields are required. Telnet is enabled by default. If you prefer SSH ensure that you have the K9 image. The same credentials will be used for both Telnet and SSH.

▼ Plug and Play Gateway Location

*PnP Gateway Host Name	<input type="text" value="pi-n29-1"/>
*PnP Gateway IP Address	<input type="text" value="192.168.139.188"/>

All fields are required. This is the location of the Plug and Play Gateway. You may use the default gateway, supplied as part of Prime Infrastructure, or you may specify an external gateway instead.

Polling Question 2

How to do you currently make configuration changes in your network? (choose one)

- a) Manually. We login and make changes as needed
- b) We use our in-house scripts to make changes
- c) We use non-cisco solution to make config changes
- d) We use either LMS/Prime Infrastructure/NCS to make config changes for wired/wireless respectively

Client Troubleshooting

BYOD – Planning/Support/Improvement/Pilot

- Design Profiling for different OS's.
 - When iOS based mobile device logs in , ISE can detect it is an Apple device and installs the certificate.
 - When an Android based mobile device logs in ISE detects it as an Android device and redirects the webpage to install the certificate.
 - Similar things for Windows and Mac Devices.
- End User equipment profiles can be created on ISE
- **Certification installation is one time process** , Once these certificates are installed , user can directly access the intranet next time onwards.
- Blocking the device if user reports a lost device.

Polling Question 3

What tools do you use for infrastructure troubleshooting? (check all that apply)

- a) We use Ping/Traceroute all the time
- b) We just log into the device and troubleshoot most of the time
- c) We do packet capture if all else fails
- d) We use special appliance/application to help us with network troubleshooting
- e) We use either LMS/Prime Infrastructure/NCS for troubleshooting wired/wireless resp.

Submit Your Questions Now!

Use the Q&A panel to submit your questions. Experts will start responding those

Trivia Question (select the correct answer)

What does one of the world's oldest airlines and Cisco Prime Infrastructure have in common?

- A. Cisco Prime Infrastructure is used to monitor the majority of the air traffic control tower networks on the major air routes that Air France uses across the world
- B. Cisco Prime Infrastructure helps monitor all the networks for United and Lufthansa
- C. Cisco Prime Infrastructure helps monitor the IT network for KLM airlines

Next Expert Series Webcast in English

Topic: Automating Cisco IOS Software Vulnerability Assessment

Tuesday, April 23, at

7 a.m. PDT (San Francisco)
10 a.m. EDT New York
4 p.m. CET Paris

Join Cisco Expert

Omar Santos

During this live event, Cisco expert Omar Santos will discuss how customers can use OVAL to quickly assess the effects of security vulnerabilities in Cisco IOS Software devices. Santos will provide step-by-step instructions on how to use OVAL content with available open source tools. Join us to learn more about security automation and machine-readable content and ask questions to Cisco experts.

Ask the Expert Events – Upcoming English

Topic: Configuring, Troubleshooting and Monitoring Wireless Networks using Security Policies

Join Cisco Experts: **Saravanan Lakshmanan**

Learn and ask questions about how to monitor and troubleshoot and configure Wireless Networks using Security Protection Policies.

Starts April 8

Topic: Automating Cisco IOS Software Vulnerability Assessment

Join Cisco Expert: **Omar Santos**

Learn how customers can use OVAL to quickly assess the effects of security vulnerabilities in Cisco IOS Software devices.

Starts on Tuesday April 23rd, 2013

Join the discussion for these Ask The Expert Events at:

<https://supportforums.cisco.com/community/netpro/expert-corner#view=ask-the-experts>

Ask the Expert Events

Ongoing

Topic: Cisco ASR 1000 Series Aggregation Services Routers (**Portuguese Ongoing**)

Join Cisco Expert: **Pedro Duarte**
Learn and ask questions about how to use and troubleshoot the Cisco ASR 1000 router.

<https://supportforums.cisco.com/thread/2208283>

Configuración de servicios de GGSN (Gateway GPRS Support Node) en el ASR5000 (**Spanish upcoming**)

Join Cisco Expert: **Nestor González**

Learn about the GGSN services in the Cisco ASR5000.

Starts: April Monday 8th

Join the discussion:

Trivia Answer

What does one of the world's oldest airlines and Cisco Prime Infrastructure have in common?

- A. Cisco Prime Infrastructure is used to monitor the majority of the air traffic control tower networks on the major air routes that Air France uses across the world
- B. Cisco Prime Infrastructure helps monitor all the networks for United and Lufthansa
- C. Cisco Prime Infrastructure helps monitor the IT network for KLM airlines**

(Correct answer C)

KLM Royal Dutch Airlines is one of the oldest airlines in the world. Any disturbance in network availability has the potential to affect users by inhibiting their access to key applications and services, ultimately resulting in poor customer experiences. "We know that network availability is critical for our employees and for our passengers. That is why we adhere to an internal service-level agreement (SLA) of 99.99% network availability," says Veldhuizen.

In the 1990s, KLM decided to standardize its network infrastructure on Cisco after a disappointing experience with a multivendor network that proved unreliable and difficult to manage. KLM's IT team uses Prime LMS, now a part of Cisco Prime Infrastructure, to monitor the health of the network. Prime LMS has been instrumental in helping us proactively respond to incidents, permitting our team to act quickly and, as a result, prevent impact on our operations."
