

## ASA 8.4, ASDM 6.4(9) – Full AnyConnect 3.1 translation

### Introduction:

This document describes how to configure the Cisco 5500 Series ASA to translate the AnyConnect client 3.1.

The client's machine must have the same specific language.

### Configure the ASA with the ASDM

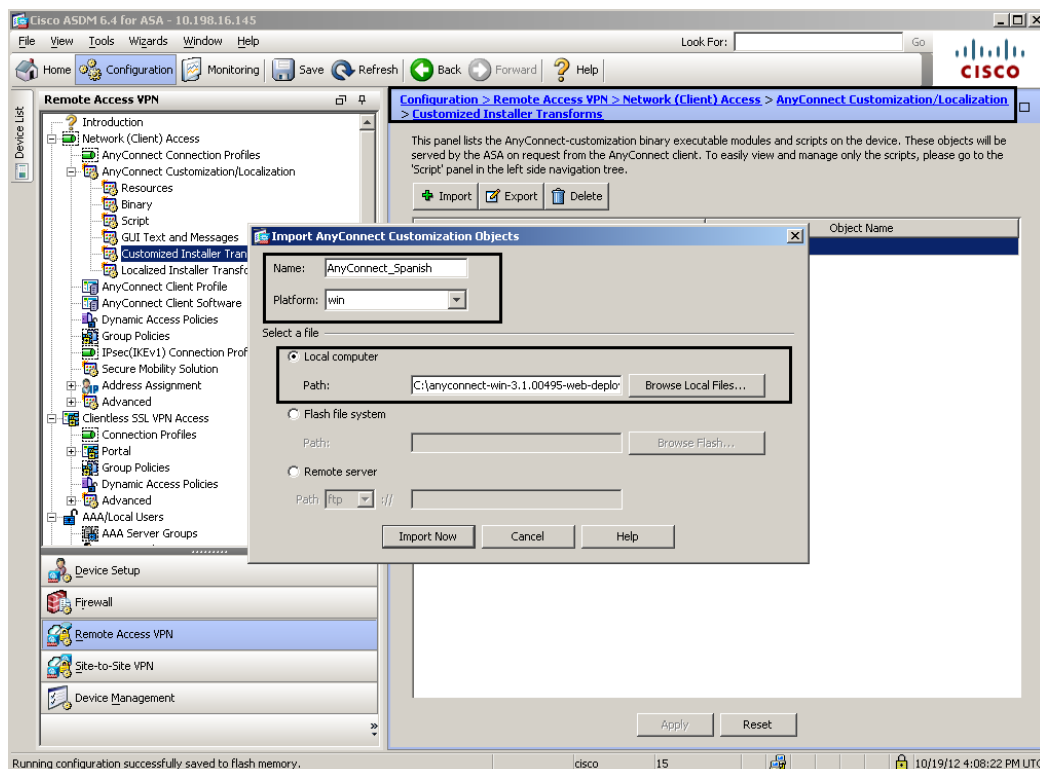

#### To translate the AnyConnect installer to Spanish via Clientless

First, download the following file at <http://tools.cisco.com/squish/774FF>

Look for "Language localization transform files for web-deploy package for Windows platforms."

Then extract the file named "anyconnect-win-3.1.00495-web-deploy-k9.mst" (included in the "es" folder).

Then in ASDM, go to "Configuration > Remote Access VPN > Network (Client) Access > AnyConnect Customization/Localization > Customized Installer Transforms", and import the previous file.

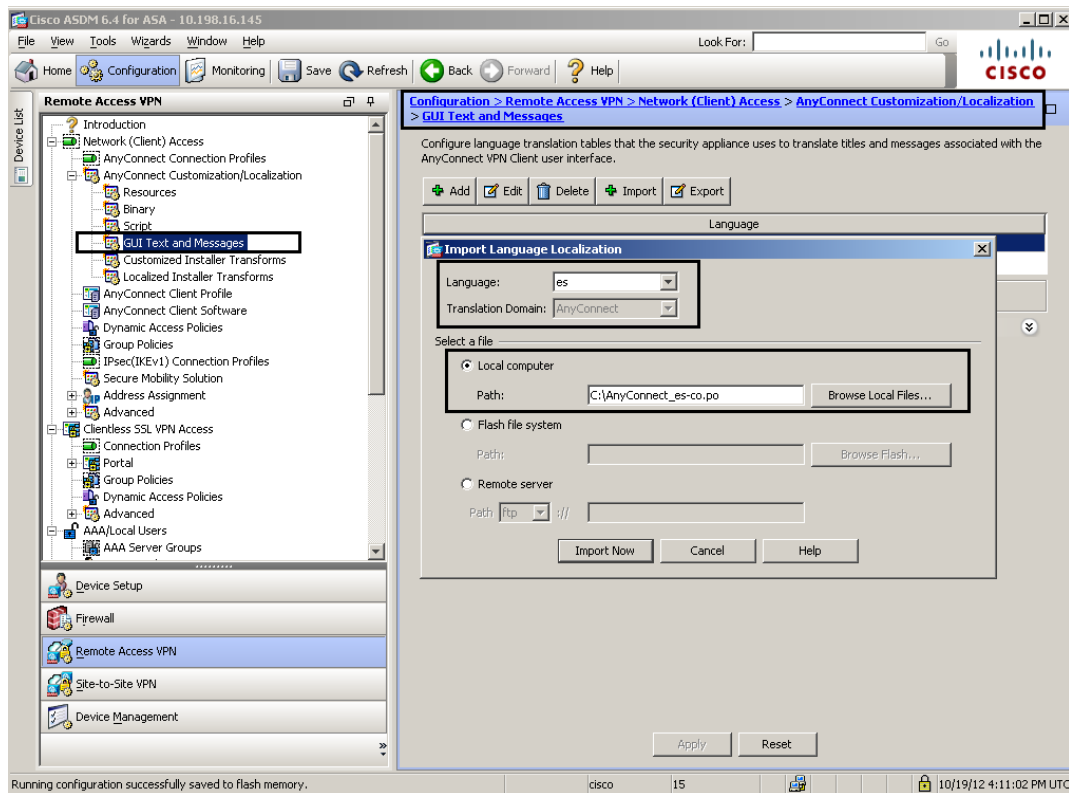

## **To translate GUI Text and Messages to Spanish**

First, download the following file at <http://tools.cisco.com/squish/CD5EC>

Look for "Translation file bundle for AnyConnect Desktop 3.1.00495 and Mobile 2.5.05112".

From here, you extract the file named: "AnyConnect\_es-co.po"

Then in ASDM, go to "Configuration > Remote Access VPN > Network (Client) Access > AnyConnect Customization/Localization > GUI Text and Messages", and import the previous file with the following name in the language field "es".

**The same steps apply for any specific language included in the Language localization folder and the Translation file bundle.**
