CONNECTING A CATALYST 9800 WLC TO CISCO DNA CENTER MANUALLY	3
CONNECTING AN AIREOS WLC TO CISCO DNA CENTER MANUALLY	22
CISCO DNA CENTER ASSURANCE DEPLOYMENT GUIDE REFERENCES	31

Overview

The purpose of this document is to provide step-by-step instructions regarding how to connect your read-only Catalyst 9800 WLC or AireOS WLC with Cisco DNA Center for Assurance monitoring through manual configuration. In a typical scenario where Cisco DNA Center's discovery mechanism is used to connect and provision, a WLC with both read and write credentials, certificates and CLI commands are automatically configured on the WLC via SSH during the discovery process. This document provides you with precisely what Cisco DNA Center will usually push so that you can determine what you'd like to have enabled or left disabled manually during day-0 setup, giving you full control of your configurations.

Connecting a Catalyst 9800 WLC to Cisco DNA Center Manually

Description: This section assumes you already have basic WLC configurations such as a management IP and associated AP(s).

1. Prerequisite configurations for adding WLC and APs into Cisco DNA Center Inventory (WLC CLI).

```
configure terminal
username [username] privilege 15 password [password]
crypto key generate rsa usage-keys label switch-key modulus 2048
aaa new-model
aaa authentication login default local
aaa authorization exec default local
netconf-yang
snmp-server community [Read-Only Community] RO
ip ssh rsa keypair-name switch-key
ip ssh version 2
line vty 0 4
login local
transport input ssh
line vty 5 31
login local
transport input ssh
ip name-server [DNS IP]
service timestamps debug datetime msec localtime
service timestamps log datetime msec localtime
clock timezone PST -8 0
clock summer-time PDT recurring
exit
```

2. Configurations normally pushed by Cisco DNA Center to be manually configured (WLC CLI).

Notes: These steps will add Cisco DNA Center as a syslog and SNMP Trap receiver.

```
configure terminal
logging source-interface [Interface]
logging host ipv6 [DNAC Enterprise IP]
device classifier
snmp-server trap-source [Interface]
snmp-server enable traps snmp authentication linkdown linkup coldstart
warmstart
snmp-server enable traps flowmon
snmp-server enable traps entity-perf throughput-notif
snmp-server enable traps call-home message-send-fail server-fail
snmp-server enable traps tty
snmp-server enable traps ospf state-change
snmp-server enable traps ospf errors
```

```

snmp-server enable traps mpls vpn
snmp-server enable traps mpls rfc vpn
snmp-server host [CISCO DNA CENTER IP] version 2c [snmp community
string]
trapflags ap interfaceup
exit

```

3. Install certificates and trustpoints on WLC (WLC CLI):

Note: Ensure the third-party Certificates are installed on Cisco DNA Center as a prerequisite.

```

configure terminal
crypto pki trustpoint DNAC-CA
enrollment mode ra
enrollment terminal
usage ssl-client
revocation-check crl none
exit
crypto pki authenticate DNAC-CA
[paste certificate copied from http://[Cisco DNA Center IP]/ca/pem
quit
yes
end

```

Verify Certificate and Trustpoint has been successfully installed (WLC CLI):

```
show crypto pki trustpoints DNAC-CA
```

Sample Output:

```

WLC#sh crypto pki trustpoints DNAC-CA
Trustpoint DNAC-CA:
Subject Name:
ou=Cisco DNA Center
o=Cisco Systems
cn=77641c92-eb3d-3cae-2c8c-12541c73394c
Serial Number (hex): 00AEFD5921C11D2CD3
Certificate configured.

```

4. Retrieve PKCS12 Certificate from Cisco DNA Center then install on WLC (Cisco DNA Center and WLC CLI):

Note: Start and complete all the steps within 15 minutes. The certificate created in Cisco expires if not consumed within a 15-minute range.

Access Cisco DNA Center's Linux shell (Computer CLI):

```
ssh maglev@[Cisco DNA Center IP] -p 2222
```

GET Token (Cisco DNA Center CLI):

```
curl --insecure -H 'Content-Type:application/json' --user  
'[UIadmin]:[UIpassword]' -X POST 'https://\[[CISCO DNA CENTER  
IP]\]/api/system/v1/auth/token'
```

Check Existing Trustpoints (Cisco DNA Center CLI):

```
curl --insecure -H 'Content-Type:application/json' -H 'X-AUTH-  
TOKEN:[token]' -X GET 'https://\[[CISCO DNA CENTER IP]\]/api/v1/trust-  
point'
```

If there is an existing trustpoint, then delete it, otherwise skip to the next step (Cisco DNA Center CLI):

```
curl --insecure -H 'Content-Type:application/json' -H 'X-AUTH-  
TOKEN:[token]' -X DELETE 'https://\[[Cisco DNA Center IP]\]/api/v1/trust-  
point/[id from previous command]'
```

If there is no existing Trustpoints, then create a new one (Cisco DNA Center CLI):

Note: Get serial number, hostname and PID from the “show inventory” command on the WLC.

```
curl --insecure -H 'Content-Type:application/json' -H 'X-AUTH-  
TOKEN:[token]' -X POST --data  
'{"serialNumber":"[serialnum]","entityName":"[hostname]","controllerIpAdd  
ress":"[CISCO DNA CENTER IP]",  
"platformId":"[PID]","trustProfileName":"sdn-network-infra-iwan"}'  
'https://\[[Cisco DNA Center IP]\]/api/v1/trust-point'
```

Verify newly installed Trustpoint (Cisco DNA Center CLI):

```
curl --insecure -H 'Content-Type:application/json' -H 'X-AUTH-  
TOKEN:[token]' -X GET 'https://\[[Cisco DNA Center IP]\]/api/v1/trust-  
point'
```

GET config URL (Cisco DNA Center CLI):

```
curl --insecure -H 'Content-Type:application/json' -H 'X-AUTH-  
TOKEN:[token]' -X GET 'https://\[[CISCO DNA CENTER IP]\]/api/v1/trust-  
point/[id from previous command]/config'
```

Install PKCS12 Certificate on WLC (WLC CLI):

```
configure terminal  
crypto pki trustpoint sdn-network-infra-iwan  
enrollment mode ra  
enrollment terminal  
usage ssl-client  
revocation-check crl none  
exit  
crypto pki import sdn-network-infra-iwan pkcs12 [HTTP URL copied from  
step above] password [Encrypted Password]
```

Verify using below commands (WLC CLI):

```
sh crypto pki trustpoints sdn-network-infra-iwan
```

Sample Output:

```
WLC#sh crypto pki trustpoints sdn-network-infra-iwan  
Trustpoint sdn-network-infra-iwan:  
Subject Name:
```

```
cn=sdn-network-infra-ca
Serial Number (hex): 51A3501806134EE3
Certificate configured.
```

5. **Enable telemetry subscriptions for Network Assurance on WLC (WLC CLI):**

```
telemetry ietf subscription 1011
encoding encode-tdl
filter tdl-uri /services;serviceName=ewlc/wlan_config
source-address [WLC IP]
stream native
update-policy on-change
receiver ip address [CISCO DNA CENTER IP] 25103 protocol tls-native
profile sdn-network-infra-iwan
telemetry ietf subscription 1012
encoding encode-tdl
filter tdl-uri /services;serviceName=ewlc/wlanpolicies
source-address [WLC IP]
stream native
update-policy on-change
receiver ip address [CISCO DNA CENTER IP] 25103 protocol tls-native
profile sdn-network-infra-iwan
telemetry ietf subscription 1013
encoding encode-tdl
filter tdl-uri

6. **(Optional) Enabling Application Experience (WLC CLI):**

```

configure terminal
flow record dnacrecord
match ipv6 version
match ipv6 protocol
match application name
match connection client ipv6 address
match connection server ipv6 address
match connection server transport port
match flow observation point
collect timestamp absolute first
collect timestamp absolute last
collect flow direction
collect connection initiator
collect connection client counter packets long
collect connection client counter bytes network long
collect connection server counter packets long
collect connection server counter bytes network long
collect connection new-connections
flow exporter dnacexporter
destination [Cisco DNA Center IP]
transport udp 6007
xport-protocol ipfix
option interface-table timeout 10
option vrf-table timeout 10
option sampler-table
option application-table timeout 10
option application-attributes timeout 10
flow exporter [EXPORTER NAME]
destination [Cisco DNA Center IP]
transport udp 6007
flow monitor dnacmonitor
exporter dnacexporter
cache timeout inactive 10
cache timeout active 60
record dnacrecord
exit

```

7. **(Optional) Configure the interface(s) in which traffic needs to be monitored (WLC CLI):**

```
configure terminal  
interface [Interface port]  
ipv6 flow monitor dnacmonitor input  
ipv6 flow monitor dnacmonitor output
```

8. **(Optional) Configure the following in the network access device to monitor wired clients (WLC CLI):**

```
configure terminal  
device-tracking tracking  
device-tracking policy IPDT_POLICY  
no protocol udp  
tracking enable  
exit
```

9. **Add the interfaces where the traffic needs to be monitored (WLC CLI):**

```
config t  
interface [Interface]  
device-tracking attach-policy IPDT_POLICY  
exit
```

10. **Enabling Network Assurance and pointing WLC to Cisco DNA Center:**

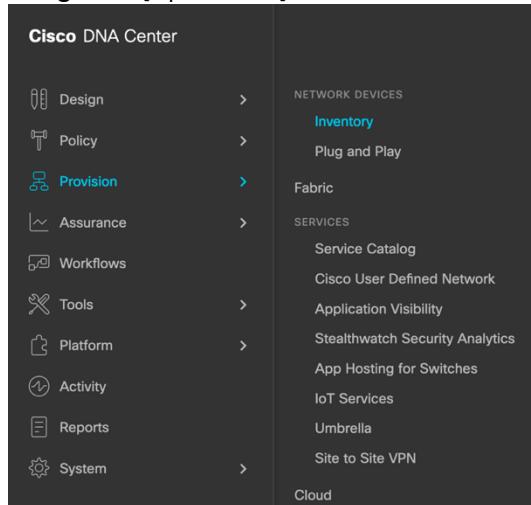

```
network-assurance enable  
network-assurance icap server port 32626  
network-assurance url [Cisco DNA Center IP]  
network-assurance na-certificate PROTOCOL_HTTP [CISCO DNA CENTER IP]  
/ca/pem  
wireless wps rogue network-assurance enable  
wireless wps mfp  
wireless wps mfp ap-impersonation  
snmp-server trap-source [Interface]  
snmp-server enable traps wireless AP wireless_mobility  
snmp-server enable traps config
```

Verify that Network Assurance is enabled and pointing to Cisco DNA Center:

```
show network-assurance summary
```

11. **Add WLC into Cisco DNA Center Inventory via Cisco DNA Center.**

- **Navigation:** [Open Menu] > Provision > Inventory

- Click on “Add Device” and a side bar will show up

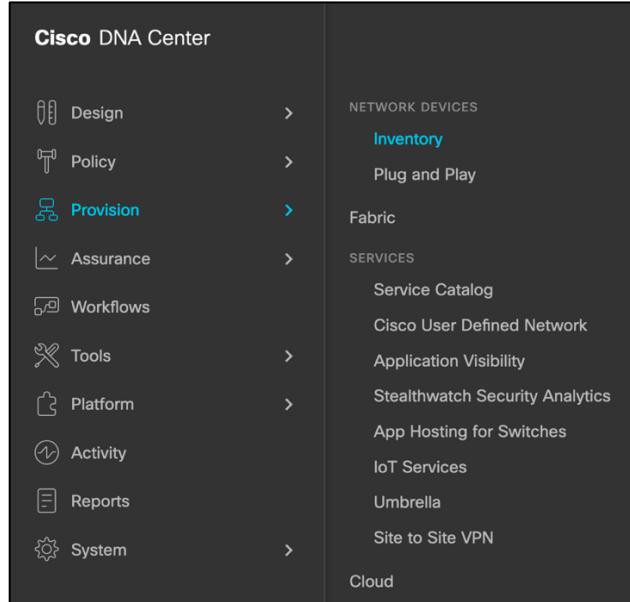

- Click “Disable” for Device Controllability
- Enter WLC IP address, CLI credentials, SNMP read-only credentials, and NETCONF port as 830
- Click “Add”

The screenshot shows the Cisco DNA Center interface. On the left, there's a sidebar with 'Inventory' and 'Plug and Play' tabs. Under 'Inventory', it says 'FOCUS: Inventory'. The main area shows a table of devices with columns: Device Name, IP Address, Device Family, and Reachability. A modal window titled 'Add Device' is open on the right. It has sections for 'Device IP or DNS Name*' (set to '172.27.75.134'), 'Credentials' (with a 'Validate' button), and 'SNMP' (with 'Version*' set to 'V2C' and 'Credential*' set to 'public | Read'). At the bottom of the modal are 'Cancel' and 'Add' buttons.

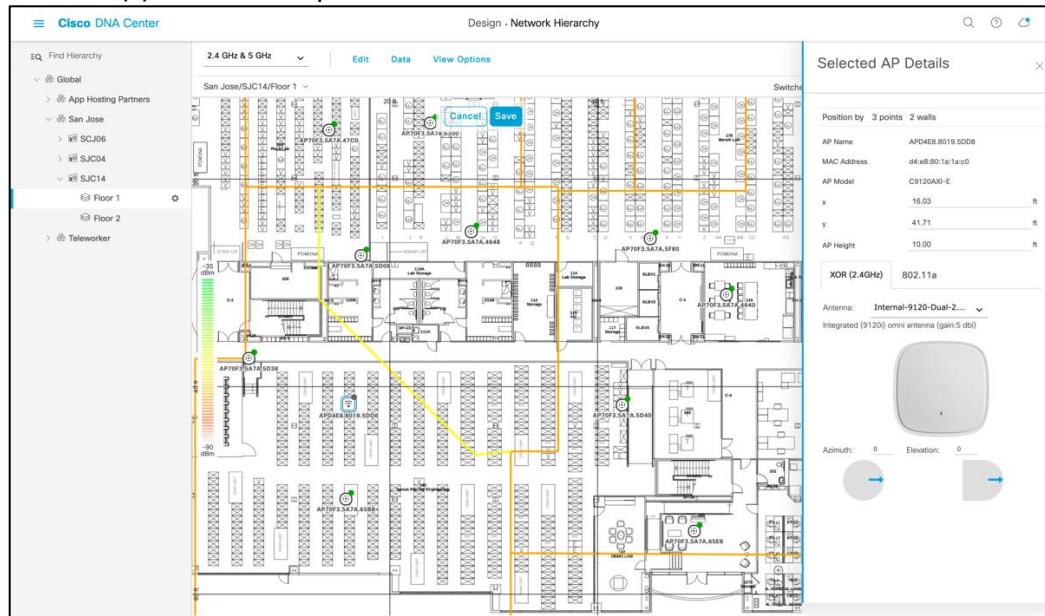

- Select check box next to added WLC or APs, hover cursor over Actions > Provision > Assign Device to Site, and assigning the WLC to a building, and AP to a floor.

This screenshot shows the 'Assign Device to Site' dialog. It lists two devices: 'APD478.9E49.1520' and '9130_2'. The '9130_2' row is selected. The dialog has fields for 'Serial Number' (set to 'FJC2428149Y') and 'Devices' (set to '9130'). There is a 'Choose a floor' button. At the bottom, it says 'Device Controllability is Disabled. Learn More | Enable'. There are 'Cancel' and 'Assign' buttons at the bottom right.

- **Navigation:** [Open Menu] > Design > Network Hierarchy

- Place AP(s) on Floor Map.

12. Your Catalyst WLC is now properly connected with Cisco DNA Center and externalizing data.

Note:

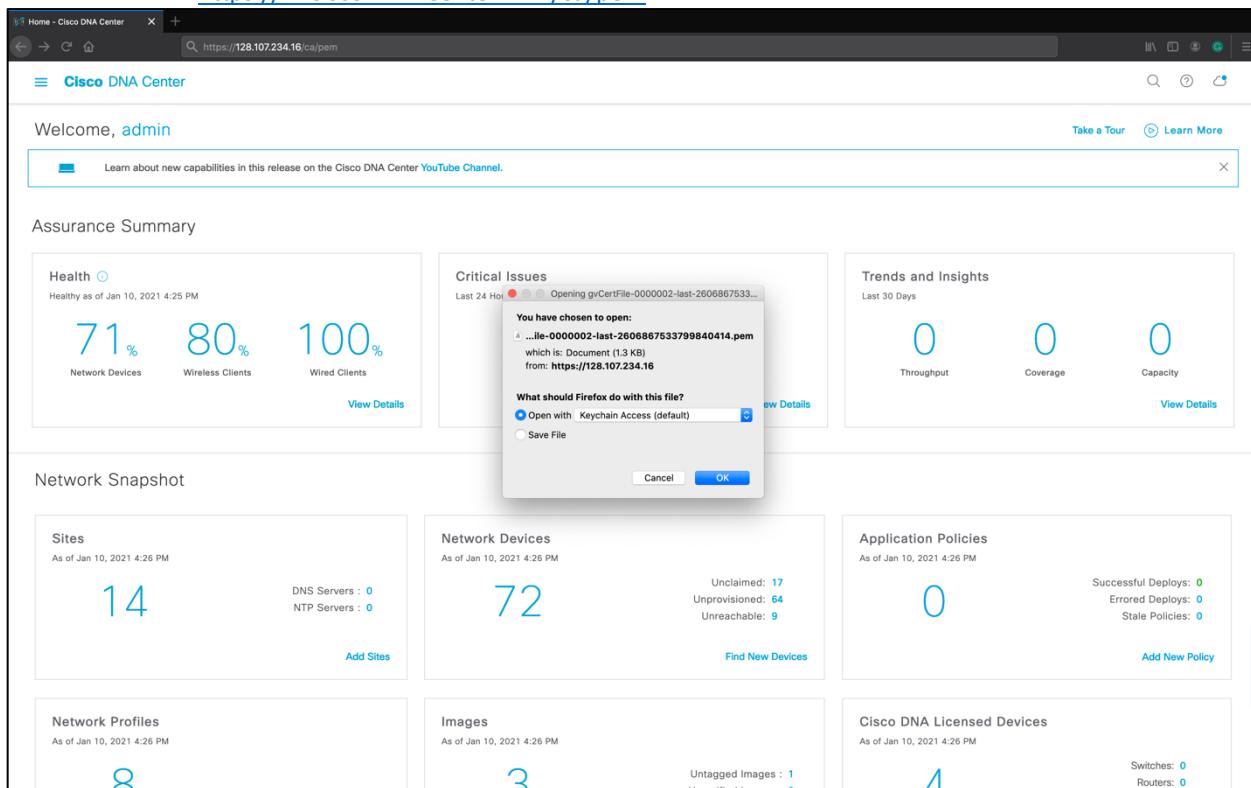

- To enable more Assurance features such as Wi-Fi 6 Assurance, Rogue Management and AWIPS, please refer to their respective deployment guides in the “Cisco DNA Center Assurance Deployment Guide References” section below for guidance on WLC CLI or GUI configuration.
- Intelligent Capture can technically be enabled via WLC CLI or GUI; however, due to the feature’s heavy automation dependency, the recommendation is to enable it only through Cisco DNA Center’s GUI (assuming your WLC has SNMP write credentials enabled) to avoid issues.

Connecting an AireOS WLC to Cisco DNA Center Manually

Description: This section assumes you already have basic WLC configurations such as a management IP, and associated AP(s).

1. Download the Network Assurance (NA) certificate from Cisco DNA Center to a SFTP or TFTP server your WLC can reach:

- Input this URL into the browser and the Cisco DNA Center's cert should be downloaded
<https://<>Cisco DNA Center IP>/ca.pem>

2. Upload the Network Assurance NA Certificate to the WLC:

a. WLC CLI:

- ```
transfer download datatype naServerCaCert
transfer download serverip <TFTP or SFTP Server IP>
 • Example: transfer download serverip 172.27.75.164

transfer download mode <tftp or sftp>
 • Example: transfer download mode sftp

transfer download filename <Name of NA Certificate Downloaded>
 • Example: transfer download filename gvCertFile-0000002-last-
 5100955940801864739.pem

transfer download path <Path of NA Certificate Downloaded>
 • Example: transfer download path /wsa-cert

transfer download username <SFTP Username>
 • Example: transfer download username CiscoUsername
 • Note: This step only applies if an SFTP download mode is configured.
```

- transfer download username <SFTP Password>
- Example: transfer download password CiscoPassword
  - Note: This step only applies if an SFTP download mode is configured in step c.

transfer download start

- Verify the configurations are correct, then input y.

**Sample Output:**

```
(Cisco Controller) >transfer download start

Mode..... SFTP
Data Type..... NA Serv CA cert
SFTP Server IP..... 172.27.75.164
SFTP Server Port..... 22
SFTP Path..... /wsa-cert/5a3cf57a-d4d9-4a0f-820d-64e2762ef638/
SFTP Filename..... gvCertFile-0000002-last-5100955940801864739.pem
SFTP Username..... CiscoUsername
SFTP Password..... *****

This may take some time.
Are you sure you want to start? (y/N) y
```

b. WLC GUI:

- **Navigation:** Commands > Upload File
- **Transfer Mode:** SFTP or TFTP
- **IP Address(Ipv4/Ipv6):** SFTP or TFTP server IP
- **File Path:** Path of NA Certificate downloaded
- **File Name:** Name of NA Certificate downloaded
- **Server Login Username:** SFTP Username
  - Note: This step only applies if an SFTP download mode is configured.
- **Server Login Username:** SFTP Password
  - Note: This step only applies if an SFTP download mode is configured.
- Click "Upload".

| Upload file from Controller   |                                                 |
|-------------------------------|-------------------------------------------------|
| File Type                     | Configuration                                   |
| Configuration File Encryption | <input type="checkbox"/>                        |
| Transfer Mode                 | SFTP                                            |
| <b>Server Details</b>         |                                                 |
| IP Address(Ipv4/Ipv6)         | 172.27.75.201                                   |
| File Path                     | /wsa-cert/5a3cf57a-d4d9-4a0f-820d-64e2762ef638/ |
| File Name                     | systemcert.pem                                  |
| Server Login Username         | sftpuser                                        |
| Server Login Password         | ****                                            |
| Server Port Number            | 22                                              |

3. Start the WSA service on the WLC and point it to Cisco DNA Center:

a. WLC CLI:

```
config network assurance server url <Cisco DNA Center IP>
 • Example: config network assurance server url 172.27.75.201

config network assurance enable
```

b. WLC GUI:

- **Navigation:** Management > Cloud Services > Telemetry > Network Assurance > Server > Basic Configuration
- **Publish Data to Assurance Server:** Enabled
- **URL:** https://<Cisco DNA Center IP>
- Click "Apply".

**4. Ensure the WSA service is enabled, and that the WLC is now externalizing data to Cisco DNA Center:**

- a. **WLC CLI:**  
show network assurance summary

**Sample Output:**

```
(Cisco Controller) >show network assurance summary

Server url..... https://172.27.75.201
Wsa Service..... Enabled
NAC Data Publish Status:
 Current State..... Externalizing data
 Last Error..... Mon Jan 11 02:19:45 2021 Un-Authorized JWT Token
 Last Success..... Mon Jan 11 02:42:45 2021
 Last 5XX server response..... Status not available
 JWT Token Config..... JWT Auth Configured
 JWT Last Success..... Mon Jan 11 02:19:45 2021
 JWT Last Failure..... None
Sensor Backhaul settings:
 Ssid..... admin
 Authentication..... Open
Sensor provisioning:
 Status..... Enabled
 Interface Name..... management
 WLAN ID..... 2
 SSID..... CiscoSensorProvisioning
```

**The WLC is successfully connected to Cisco DNA Center if:**

- **Server url:** Pointed to the Cisco DNA Center IP address.
- **Wsa Service:** Enabled
- **Current State:** Externalizing data
- **Last Success:** Ahead of Last Error
- **Last Error:** Behind Last Success
- **JWT Token Config:** JWT Auth Configured
- **JWT Last Success:** Ahead of "JWT Last Failure"
- **JWT Last Failure:** Behind JWT Last Success

- b. **WLC GUI:**

**Navigation:** Management > Cloud Services > Telemetry > Network Assurance > Server > Monitoring Info

The screenshot shows the Cisco Wireless Local Controller (WLC) management interface under the 'Management' tab. The 'Network Assurance' sub-tab is selected. The configuration pane displays the following details:

- Connectivity:** Externalizing data
- Data externalization:** Enabled
- Server URL:** https://172.27.75.201
- Assurance service:** Enabled
- Assurance CA certificate:** Expires on Feb 10 17:34:05 2023 GMT ([Details](#))
- JWT token enrollment:** JWT Auth Configured

**Data Publish Status:**

- Last Success: Wed Jan 13 05:19:49 2021
- Last Error: Wed Jan 13 05:19:48 2021 Un-Authorized JWT Token

**Transfer Statistics:**

- Probe Count: 709
- Retry Count: 711
- Publish Error Count: 1049

**Divergence Statistics:**

- Diverge Count: 0
- Converge Count: 0
- Current Diverge Count: 0

**Cache Statistics:**

- Current Cache Count: 0
- Max Cache Count: 37798

**JWT enrollment statistics:**

- Last success: Wed Jan 13 05:19:48 2021
- Last Failure: None
- Successes: 169
- Failures: 0
- Aborts: 0
- Validation errors: 0

The WLC is successfully connected to Cisco DNA Center if:

- **Connectivity:** Externalizing data
- **Data Externalization:** Enabled
- **Server URL:** Pointed to the Cisco DNA Center IP address.
- **Assurance service:** Enabled
- **JWT Token Config:** JWT Auth Configured
- **Last Success:** Ahead of Last Error
- **Last Error:** Behind Last Success
- **JWT enrollment statistics – Last success:** Ahead of JWT Last Failure
- **JWT enrollment statistics – JWT Last Failure:** Behind JWT Last Success

## 5. Add and enable the SNMP Trap receiver on the WLC:

### a. WLC CLI:

```
config snmp trapreceiver create <Unique Name> <Cisco DNA Center IP Address>
```

- **Example:** config snmp trapreceiver create 172.27.75.201  
172.27.75.201

```
config snmp trapreceiver snmpv3 enable
```

```
show snmptrap
```

- **Note:** Ensure the configured settings are showing up properly.

### **Sample Output:**

| (Cisco Controller) >show snmptrap |               |        |                            |  |                           |  |
|-----------------------------------|---------------|--------|----------------------------|--|---------------------------|--|
| SNMP Trap Receiver Port...162     |               |        |                            |  |                           |  |
| SNMP Trap Receiver Name           | IP Address    | Status | IPSec - State/Profile Name |  | SNMPv3-State/Username     |  |
| 172.27.75.201                     | 172.27.75.201 | Enable | Disabled / none            |  | Disabled / Not Configured |  |

### b. WLC GUI:

- **Navigation:** Management > SNMP > Trap Receivers

| SNMP Trap Receiver Name | IP Address(Ipv4/Ipv6) | Status | IPSec | SNMPV3 |
|-------------------------|-----------------------|--------|-------|--------|
|                         |                       |        |       |        |

- Click on “New”, a unique name in the “SNMP Trap Receiver Name” field, and your Cisco DNA Center IP in the “IP Address(Ipv4/Ipv6)” field, then click “Apply”.

- Ensure the configured settings are showing up properly.

## 6. Add a syslog server for the WLC to send any debug logs to Cisco DNA Center:

### a. WLC CLI:

```
config logging syslog host <Cisco DNA Center IP>
 • Example: config logging syslog host 172.27.75.201

config logging syslog level critical
```

### b. WLC GUI:

- **Navigation:** Management > Logs > Config
- Input your Cisco DNA Center IP address in the “Syslog Server IP Address(Ipv4/Ipv6)” input field, then click “Add”.
- Ensure the “Syslog Level” configuration is set to “Critical”.

The screenshot shows the Cisco Wireless Local Controller (WLC) management interface. The left sidebar lists various management categories. The 'Management' section is expanded, showing 'Logs' which is further expanded to include 'Message logs'. Under 'Logs', there is a 'Syslog Configuration' section. This section includes fields for 'Syslog Server IP Address(Ipv4/Ipv6)' (with an 'Add' button), 'Syslog Server' (listing '172.27.75.201' with a 'Remove' button), 'Syslog Level' (set to 'Critical'), 'Syslog Facility' (set to 'Local Use 0'), 'IPSec' (checkbox), and 'IPSec Profile Name' (set to 'none'). Below this is the 'Msg Log Configuration' section, which includes fields for 'Buffered Log Level' (set to 'Debugging'), 'Console Log Level' (set to 'Debugging'), 'File Info' (checkbox checked), 'Trace Info' (checkbox checked), 'Debug Buffered' (checkbox), and 'Traceback Logging Level' (set to 'Errors'). An 'Apply' button is located at the top right of the configuration area.

## 7. Enable Network Assurance Channels on WLC:

### a. WLC CLI:

- config network assurance subscribe all

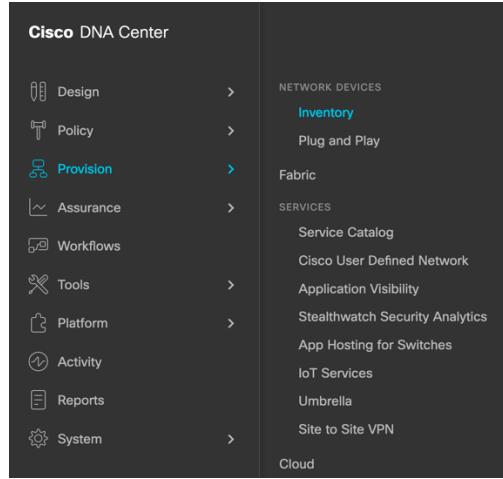

### b. WLC GUI:

- Navigation:** Management > Cloud Services > Telemetry > Network Assurance > Server > Advanced Configuration
- Under "Unsubscribed Channels" select all channels and click "Subscribe".
- Under "Subscribed Channels" select all channels, configure "On Change Mode" to "Enabled", then click "Apply".

The screenshot shows the 'Network Assurance' page in the Cisco WLC management interface. The left sidebar is identical to the previous screenshot. The main area has tabs for 'Monitoring Info', 'Basic Configuration', and 'Advanced Configuration', with 'Advanced Configuration' selected. The 'Advanced Configuration' tab contains two main sections: 'Subscribed Channels' and 'Unsubscribed Channels'. The 'Subscribed Channels' section displays a table of currently subscribed channels, each with a checkbox, an interval (30 seconds), and an 'On Change Mode' status (Enabled). The 'Unsubscribed Channels' section shows a list of available channels with a single checkbox. Buttons for '< Subscribe' and 'Unsubscribe >' are located between the two sections. At the bottom, there are 'Interval (Sec)' and 'On Change Mode' dropdowns with '15' and 'Enabled' selected, respectively, followed by 'Apply' buttons.

## 8. Add WLC into Cisco DNA Center Inventory via Cisco DNA Center:

- Navigation:** [Open Menu] > Provision > Inventory

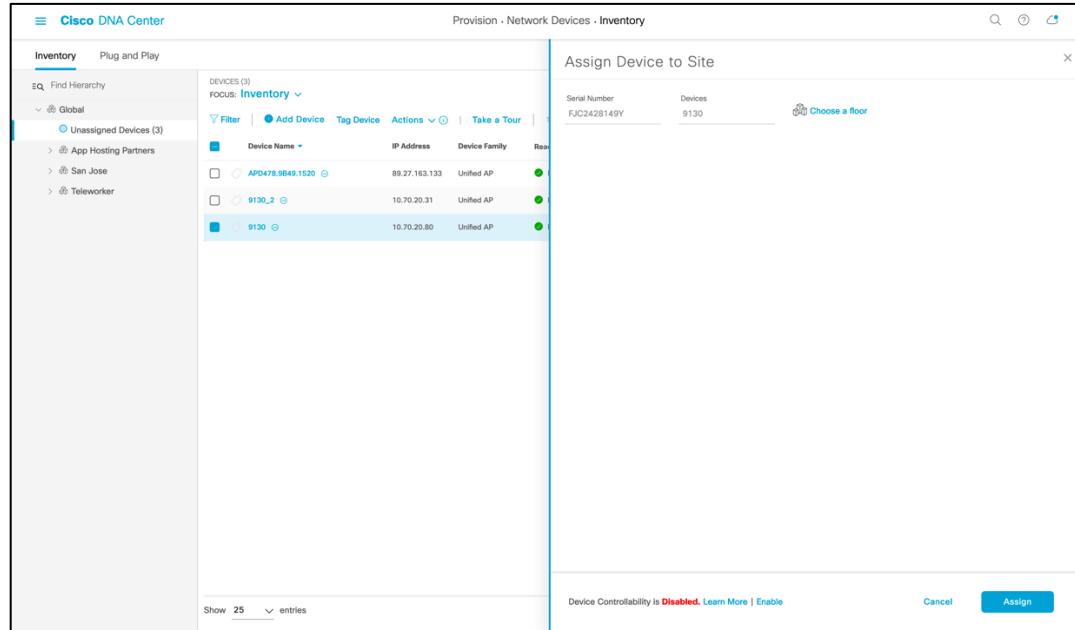

- Click on “Add Device” and a side bar will show up
- Click “Disable” for Device Controllability
- Enter WLC IP address, CLI credentials, SNMP read-only credentials.
- Click “Add”

The screenshot shows the Cisco DNA Center interface with the 'Inventory' module selected. A modal dialog box titled 'Add Device' is open on the right. The dialog contains the following fields:

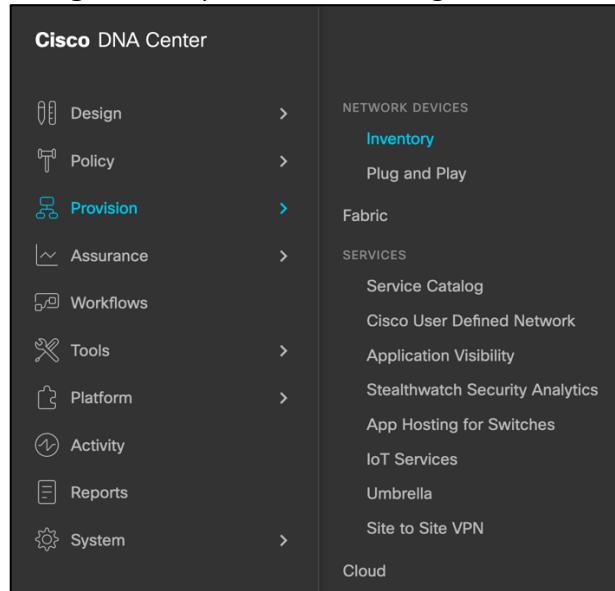

- Device IP / DNS Name\***: 122.27.75.134
- Credentials**: Select global credential (selected) or Add device specific credential. Credential dropdown: TMAdmin
- Version\***: V2C
- Credential\***: public | Read

At the bottom of the dialog are 'Cancel' and 'Add' buttons. The background shows a list of network devices in the inventory, including various AP models and their details like IP Address, Device Family, and Reachability status.

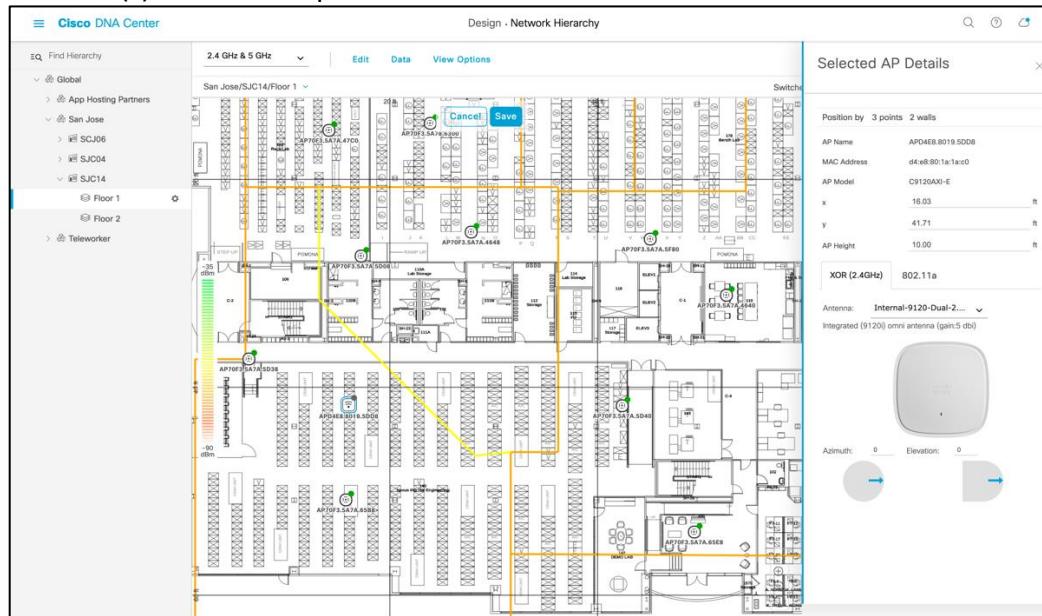

- Select check box next to added WLC or APs, hover cursor over Actions > Provision > Assign Device to Site, and assigning the WLC to a building, and AP to a floor.

- Navigation:** [Open Menu] > Design > Network Hierarchy

- Place AP(s) on Floor Map.

## 9. Your AireOS WLC is now properly connected with Cisco DNA Center and externalizing data.

- To enable more Assurance features such as Wi-Fi 6 Assurance, Rogue Management and AWIPS, please refer to their respective deployment guides in the “Cisco DNA Center Assurance Deployment Guide References” section below for guidance on WLC CLI or GUI configuration.
- Intelligent Capture can technically be enabled via WLC CLI or GUI; however, due to the feature’s heavy automation dependency, the recommendation is to enable it only through Cisco DNA Center’s GUI (assuming your WLC has SNMP write credentials enabled) to avoid issues.

## Cisco DNA Center Assurance Deployment Guide References

To enable specific Network Assurance features, please refer to feature specific deployment guides.
